

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

INTRODUCTION.

The Fifth Biennial Report of the Bureau of Labor Statistics of Illinois is presented in Three Parts, treating respectively of the statistics of Mortgage Indebtedness, the statistics of Strikes, and the statistics of Coal Production in Illinois.

PART I. The specific investigation undertaken by this bureau as the basis of the present report has been an inquiry concerning the debts of the people as shown by the public records of mortgages placed upon private property.

It has been the practice of the board in the past to direct its attention to special features of the general situation in industrial affairs, and to procure and compile in statistical form all obtainable information on the subjects chosen, with a view to procuring a series of reports of definite value for reference and record. These inquiries have heretofore related chiefly to the details of outward condition as they have been found to exist among the workingmen of the State, and the reports published have treated successively of wages and earnings; working time and the daily hours of labor; the cost and manner of living; the influence of convict labor upon wages; the growth, character and potency of labor organizations; the medium and frequency with which wages are paid; the imposing of fines upon employes for trivial offenses; the condition of coal miners, and kindred topics touching the material status of those who work for wages in the various occupations.

These subjects have been taken up from time to time as the demand has arisen for information concerning them, and in the belief that the special function of the bureau is to afford intelli-

gence of a trustworthy character, not otherwise obtainable, upon all questions of fact relating to the social and physical condition of those under employment.

In taking up the subject of the debts of all the people for consideration in the present report, the attempt has been made to explore somewhat deeper than the surface indices of condition and to bring to light a class of facts, heretofore unattainable, yet fundamental in character, and closely allied to the problems of the day relating to the working people. Attention should doubtless be directed quite as much to the underlying facts which develop conditions, as to the outward aspect of affairs; and if such facts are involved in obscurity no labor can be more wisely expended than that required to define their exact character, and thus their possible influence. Such obscurity involves the subject of private debt, and the effort to ascertain its real proportions has been made in the belief, not only, that data upon this subject are of the first importance in all economic discussion, but equally because there is evidence on every hand of a desire for this class of facts. This has no doubt been stimulated by the conflicting estimates and conjectures of those who have recently discussed the subject, and by the discovery, in that connection, that it was impossible to test by any reputable statistics any of the statements made or denied.

The aggregate of public debts, or those assumed by the people in their corporate capacity, is a matter of public record. Statistics of the national, state, county, town or municipal indebtedness are officially published by governmental agencies and constitute accessible and current information. The same is generally true of the amount of the bonded indebtedness of railroad companies and other corporations whose shares are offered for sale to the public. When, however, the inquiry reaches the subject of individual transactions, and the amount of personal indebtedness assumed and borne by the people, there is no longer any guide in official statistics, and, equally, no apparent limit to the exercise of the imagination.

The difficulties in arriving at this last element in the total of indebtedness resting upon the community are manifold, and in some degree insurmountable. The facts, like many of those sought in economic inquiries, are primarily in the possession of individuals

only; they are for the most part of a purely personal nature, and as such practically inaccessible; for the average man does not recognize a public interest in his personal affairs as legitimate. Moreover, statistics based upon personal statements are necessarily inexact in many particulars and from varying influences even when the witness is willing and sincere; and to get them at all is impossible in the case of the wilfully uncommunicative. Practically, also, it is entirely beyond the province or the resources of this office to make a personal canvass of all the people for any purpose.

It is thus apparent that only such personal debts as become matters of public record and, consequently, of public information, could be contemplated either as within the reach of the bureau, or as affording legitimate material for exact statistics on this subject. But on the other hand the debts of record comprehend the mass of all private debts, save those of current business and exchange, and as such possess in paramount degree the special interest which attaches to all liabilities. They afford, moreover, not only aggregates, but a great variety of details as to the conditions of life in every community. Possibly no abstract statistics could furnish a truer index of the financial status of the people than the record of the farms, live stock and crops mortgaged for borrowed money; or of the houses and lots, household goods, and wearing apparel of those living in towns, pledged for debt. On the other hand there is equal significance of another kind in the number and character of mortgages given for balances of purchase money, as indicating a disposition and ability on the part of the mortgageor to increase rather than diminish his possessions. Facts of this character, especially if developed for consecutive periods, contribute alike to the elucidation of the broader economic problems, and to the specific knowledge of classes and localities. Such a compilation is here presented for the State of Illinois. It has been undertaken for the general purpose of fixing the measure, character and distribution of the private debt which rests upon the people, and which together with the various forms of public debt constitutes a burden, in interest and taxes, which, it is frequently claimed, must in the last analysis be paid by the wages of labor.

Whether the volume of recorded debt here shown is what may be justly regarded as a normal indebtedness, or whether it is greater than comports with a true and permanent prosperity; or to what degree the debt condition is in itself an evil, or how far it is an essential feature of all business activities, it is not assumed to discuss or determine. The attempt has been made simply to establish a basis of fact upon which this subject, and its relations to those under employment, and to all people, may be intelligently considered.

PART II. The second division of this report consists of a statistical recital of the strikes which occurred in Illinois during the series of years from 1881 to 1886 both inclusive. The tables presented are the result of a special investigation made by the Bureau of Labor at Washington concerning the strikes of the whole country. Through the courtesy of the Commissioner, Hon. Carroll D. Wright, and with the consent of the Secretary of the Department of the Interior, transcripts of such schedules as contained the statistics of strikes in Illinois were tendered to this bureau in order that they might be officially published as a part of the industrial history of the State. These tables are introduced by appropriate commentary and analysis, summarizing the more important details, and reducing the leading facts developed by the inquiry to concise statement.

PART III of this report is devoted to the customary annual review of the progress of coal mining in this State, and embraces statistics not only of production, but of the economic relations existing between coal miners and their employers, as shown by the rates of wages, values of product, and the physical conditions under which the labor of miners is performed.

PART I

STATISTICS OF MORTGAGES.

CHAPTER I.

SCOPE OF THE INVESTIGATION.

THE CLASSIFICATION OF MORTGAGES.

Evidences of debt which appear upon the public records are of two classes, distinct in motive and character, but alike exponents of private indebtedness. These are, mortgages in their various forms, or their equivalents; and judgments, or decrees of certain courts against debtors, which are liens upon any attachable property they may possess, until satisfied. These are equally record evidences of debt, and equally entitled to consideration in any summary of total indebtedness; but compared with each other, the judgment debts are relatively insignificant in number and amount. There could be no question as to the paramount value of the statistics of mortgages, and equally no question as to the desirability of obtaining both; but a definite limit to the resource of the board has rendered it impossible to extend the inquiry, for the present at least, beyond the records of mortgages. In order, however, to test the relative importance of the two classes of records, a trial examination has been made of the records of Sangamon county, which shows that the aggregate of all the decrees rendered in the year 1887 was equivalent to 8 per cent. only of the aggregate of mortgages executed and recorded during the same period. This is possibly a fair indication of the relative amounts of the two classes of debts, though not necessarily of the relative interest which might attach to them.

Mortgages naturally group themselves into two classes, those in which real estate is made the security for debt, and those in which personal property is so pledged; real estate is also usually classified as lands and lots, and this distinction is, perhaps, not less important than the former. The primary subdivision of the subject is accordingly three-fold, embracing mortgages on lands, on lots and on chattels; the first including all lands not subdivided as town property; the second, all lots, blocks and sub-divisions in and about cities and towns; the third, all kinds of personal property.

In addition to this classification a distinction has also been recognized, and preserved, so far as the records indicate the fact, between mortgages given for borrowed money and those for deferred payments of purchase money. The motive in these two classes of cases, and the situation implied, are so dissimilar as to justify and require a separation of them, solely on the basis of their essential differences. The one implies at least the need of money, though it may be solely for business ventures, and suggests possible extremities; the other indicates the possession of money to invest and a legitimate expectation of more.

It would be additionally interesting no doubt to penetrate somewhat deeper into the motive of mortgages, of both classes; but the records afford no clue as to what proportion of the money borrowed on land, for instance, is used in the purchase of other lands, or for buildings, tiling or other betterments of the estate; or what proportion of the loans made on town lots is restored to the lot in the form of improvements; or what amounts are borrowed for speculation or business purposes, as distinguished from loans made by reason of misfortune or financial embarrassment. The mortgages also for balances of purchase money may be, and in large cities frequently are, made by speculators in real estate rather than by *bona fide* holders for use. These details of motive, however, can not be discerned from any study of the public records. It is usually possible to find internal or other evidence of the fact, if a mortgage is given for deferred payments; but beyond that no classification based on the nature of the transaction is feasible.

The division on this line has been made under the general instruction to examiners, to include in the list of deferred payment

mortgages only those which were clearly of that character, and those which were probably such upon a fair inference, reinforced by the personal knowledge of the examiner, who in most instances has been the county recorder himself. The presumption is, therefore, that the real number of mortgages based on purchases may be somewhat greater than the reported number, owing to the impossibility of always identifying them; but not less, since those which are taken, are such only as do not admit of reasonable doubt. In localities where it is the custom to reserve a vendor's lien, for deferred payments, in the deed to purchasers, instead of taking a mortgage, such deeds have been construed and enumerated as mortgages for deferred payments. Also in the case of mortgages given to building and loan associations, although these are for a specific sum of money loaned to the mortgageor, yet the conditions are such, and the object of the association so well defined, that all such loans are clearly made solely to facilitate the purchase of, and payment for the property incumbered.

In regard to chattel mortgages given for balances of purchase money, the distinction is the more readily made from the fact that those dealers who make a business of selling furniture, pianos, sewing machines, farm machinery, etc., on time, taking mortgages for balances due, generally use a special form of instrument adapted to their business. These and such others as give evidence of purchases made, constitute the deferred payment class of mortgages on personal property; of which it may also be said that the total given, is, for reasons already indicated, possibly somewhat less, but certainly not more than the actual number.

A further feature of this examination has been the special notation of two classes of mortgagees, viz: non-residents of the State, and building and loan associations. These are the only classes of mortgagees which it was found feasible to specially enumerate, though, for obvious reasons, it was eminently fitting that the opportunity should be improved to separate and classify these. There have consequently been taken and summarized, separately, from the records of each county, all mortgages executed to non-residents and such as have been given to the various co-operative building societies.

Finally, chattel mortgages have also been subjected to classification according to the character of the property pledged, in order to indicate what classes of people and of property most frequently appear on the chattel records.

This statement outlines the special features of the work undertaken and defines the limits within which it has been found necessary to restrict the investigation. It remains to be considered what period or periods should be embraced in such an inquiry as that contemplated.

THE YEARS FOR WHICH STATISTICS HAVE BEEN TAKEN.

It is evident at the outset that, provided the given aggregates of debt at any one time be approximately reached, there is still a degree of uncertainty, unless comparisons can be made, as to whether the total found be what may be considered a normal amount, under all circumstances, or greater or less than that of other communities or that in other times. But as a matter of fact there are no official statistics, so far as it has been possible to learn, covering the details here contemplated, for any period or any State. There has certainly been no corresponding compilation made in this State, and none by the general government. The absence of such a basis of comparison has emphasized the necessity of establishing one, by extending the examination of records to several periods; for the sake, not only of the facts themselves, but for what light they might shed upon each other, and upon the present situation. In order, therefore, to present consecutive and similar summaries, the same class of facts has been gathered, from the same files of records, and they have been subjected to the same classification and analysis for each of the three calendar years 1887, 1880 and 1870. A view is thus obtained from three points of observation, embracing a period of eighteen years, during which the State has undergone many changes, and great physical development.

It is also believed that the dates chosen have been, as nearly as any, normal years, that is, free from unusual disturbances, or exceptional monetary inflations or depressions, and, consequently, that they afford a basis for legitimate inference concerning relative conditions as indicated by the relative volume of debt.

THE TOTAL OF EXISTING INDEBTEDNESS.

The details of the records thus transcribed, for the three calendar years, afford a mass of exact and parallel data for each year, which are conclusive as to the amount and character of all debts actually recorded during those years; but yet are not conclusive as to the whole amount outstanding at any one time. This is the real objective in any inquiry of this kind, and to reach it, or to make the closest possible approximation to it, has been the purpose of this inquiry.

The actual total of existing indebtedness at any given point of time is really an amount which, it requires but little reflection to realize, can not for obvious reasons be exactly determined. It involves first the identification and registration of every mortgage in force; and this would require a search of all records extant, and a tracing of every instrument from its execution to its maturity, and from its maturity to its cancellation or extension,—as to the former of which the records themselves are not a certain guide, and as to the latter, no guide at all; it involves also the discovery and elimination of all partial payments or payments made in advance, and the retention of all amounts due and unpaid,—concerning which there is no record evidence whatever; moreover, the amount of labor implied in such an attempt at exact enumeration, even if the facts were all accessible, would simply be incalculable. In brief, the total of existing debts is not to be derived with complete accuracy from any study of the face of the records, nor from any other source.

Limitations such as these may be, and usually are, encountered in every branch of statistical work; but they do not necessarily constitute an insurmountable barrier to the seeker for substantial truth. The more important matter is, that such limits be fairly recognized, and that the line be well-defined which separates the fact established from the fact inferred.

In this case we have certain statistical data, exact and unimpeachable, gathered from the public records, which are final authority to all men. The actual facts found are the details of every mortgage recorded within certain years. These transcribed, analyzed and tabulated, chronologically, constitute, not only accurate and valuable statistics in themselves, but also a basis of fact from

which to deduce whatever the facts may justify. The tabular portions of this report consequently present statistics of two kinds,—the facts as taken from the records, and the deductions made from them; the former being the essential features of every mortgage recorded, the latter being the presumptive total of all mortgages in force; from the former there can be no appeal; as to the latter, they are true only so far as the hypothesis on which they are based is true, and the calculations themselves correct.

The items taken from the records embrace the four essential factors of every instrument, to-wit: the amount for which each mortgage is given; the character and amount of the property mortgaged; the time within which payment is promised, and the rate of interest per annum, to be paid. As to the amounts involved, there is rarely any obscurity. As to the classification on the basis of property, mortgages which cover both lands and lots, or both real estate and personal property, or quantities of miscellaneous chattels, are placed in the class which is represented by the greatest apparent value. As for the time for which mortgages run, it is either a specified date at which the whole amount is payable, or successive dates at which partial amounts are payable. In the latter event the several terms and amounts are reduced to an equivalent single term for the whole amount.

All mortgages, notwithstanding their minor differences, are thus reduced to a common form admitting of tabulation. It is thereafter a merely mechanical process to aggregate them as to number and amounts, by classes and by years, for each county and the State.

But there is a further mathematical process of which these given factors are susceptible. The debts represented by these hundreds of thousands of mortgages are in fact for amounts ranging from \$1 to \$2,250,000, and are assumed for periods ranging from 30 days to 25 years, yet by a common arithmetical process they may all be reduced to their equivalents in a single amount running for a single period. To this end the average term, or equated time, for all the mortgages in each class, and for each year, and each county, has been computed separately, and subsequently tabulated, with collateral results, for each county and the State. This presents not only aggregates of numbers and of

amounts for each class and locality, but an average term, or period of duration, which, applied to the total, is equivalent to all the given terms of the integral amounts. A similar process develops an average rate of interest for the various totals, which, applied to the aggregates for counties or years, produces a total amount of interest equivalent to the sum of all the interest computed for the various amounts at the given rates. Thus is obtained for the total of indebtedness for each year an average term equivalent to all the actual terms, and an average rate of interest equivalent to all the actual rates as found upon the records.

These results constitute the body of facts established from a literal transcript of the records. They are: the details and aggregates of all mortgage debts assumed in this State, for each of three calendar years, being respectively ten and seven years apart; the details and aggregates of property incumbered, both real and personal; the actual and average terms, and the actual and average rates of interest, of the mortgages given.

This information has of itself definite and intrinsic value as the first contribution to the statistics of the subject, but it is believed to have a further value as affording the factors necessary to a closer calculation of the total of mortgages in force, at each of the given dates, than can be obtained in any other way.

The hypothesis on which such calculation is based is, that for a limited number of consecutive normal years the experience for the whole would probably be substantially uniform with that of any one of them. The application is, that if it is found that the term equivalent to all the recorded terms in a given year is, for instance, three years, then the total of mortgages for that year, multiplied by three, will give the presumptive total of all mortgages in force at any given time in that year. This implies only that the same general situation obtains in each of the three consecutive years, viz.: that the aggregate amounts are practically the same, and the average term the same. In that case the total in force would consist, first, of those mortgages assumed during the year and maturing in three years; also those written in the year preceding and maturing the year following; and finally those of two years, before maturing in the present. This is equally true

of any number, or fractional number, of years which may be found to be the actual average for any class of mortgages, and the rule is of uniform application to all periods.

There are, however, certain minor and modifying facts which are not admitted to consideration in this formula for obtaining the total indebtedness, for the reason that it is regarded as impossible to determine what the measure of their importance may be as affecting the general result. It is known that certain mortgages are discharged and cancelled before the expiration of the recorded term, and that others are extended beyond maturity. These two classes of cases may or may not offset each other. It is impossible to determine this, and it is consequently not attempted to modify the results, as computed from the actual records, in any degree, by speculations as to this factor. A wide and generic experience in loaning money might justify a fair presumption on the subject, but there is no foundation in it for statistics.

Mortgages may also be paid off in part, though the records do not show it; and doubtless are sometimes extended in part beyond maturity. Practically, however, those who wish to pay in installments provide by consecutive notes for doing so, and such various times and amounts are given their proper adjustment in the calculations for the average term. There are necessarily differences between the promise and the performance in transactions of this kind as well as in others, but these can not profitably be traced. For statistical purposes, masses of details such as this subject involves, must be treated as practically homogeneous, and minor irregularities as neutralizing themselves.

THE CONSIDERATION OF INTEREST.

Thus far attention has only been given to the principal amount secured by the mortgage, but that instrument equally demands and secures the payment of a certain sum as interest, and that sum is clearly entitled to consideration as a portion of the total indebtedness.

The amount payable as interest being governed by the rate as established, primarily, and, so far as the record is concerned, by the statute, but subordinately by the demand for and supply of money, modified again by the nature of the security offered, there is nec-

essarily great variation in this factor, even for limited terms; while for the widely separated periods under consideration the difference in the rate and relative amount of interest is very great. The deduction of an average rate, mathematically equivalent to the actual rates, for any given period is, however, but the application of a simple principle, though involving in this instance a vast amount of clerical labor. The result is a common rate of interest truly equivalent to all the recorded rates, and which applied to the gross principal sum of the mortgages in any class gives the total amount of interest paid or payable in any given time.

But, on the presumption that interest is paid when due, that only which is unaccrued properly stands as a part of the mortgage debt, and that which is unaccrued may be any portion of the whole according to the length of time which has elapsed since the debt was assumed,—those mortgages approaching maturity having less, and those recently incurred having more, and others having graduated amounts of interest properly chargeable to the principal. In this view of the case it has been considered equitable, for the purposes contemplated, to assume that as much interest has accrued and been paid on any large number of miscellaneous mortgages as remains unpaid; in other words, that a proper amount to be added to the principal for account of interest due is a half of the whole amount of interest computed for the average term at the average rate of interest. In order, therefore, to express the total debt half the interest is added to the given principal, and the tables following show both factors separately and combined.

The mode of reckoning the presumptive total, from the record data taken, is thus seen to consist, first and chiefly, in deriving a true average term for all mortgages within given periods and places, and in applying this term as a multiplier to the aggregates obtained. The potency of this multiplier in its effect upon the result, has rendered its calculation and verification a most delicate and laborious process, but it has in every instance been wrought out with the utmost care and fidelity, and with such allowance as could be made for every modifying condition. Collaterally the average rate of interest is found, and to the principal sum is added interest at the average rate for half the average term.

The results obtained as the aggregate of indebtedness can not for obvious reasons be actual, in the sense that the aggregates for

given years are actual; but they are true upon a legitimate hypothetical basis, and, the process being uniform, are relatively true of the various times and places considered. They are, in every sense, approximately true, and in no sense misleading. The basis of fact is clearly defined and authentic, and the process of deduction stated; if the conclusions are faulty, the same factors may be subjected to any other process promising better results, or they may be profitably studied independently of any combination.

THE METHODS ADOPTED.

The accumulation of such a mass of information as is here contemplated, should, certainly, if the best results are expected, be undertaken only upon well-matured plans, submitted to the most competent agents for execution. It was not less essential in this case, that the ultimate cost should not exceed the resources of the bureau. Both considerations pointed to the county recorders themselves, as not only exceptionally qualified by their familiarity with the records and knowledge in many instances of auxiliary facts outside the record, but as also in a position to render the desired service at a minimum of cost.

Schedules were accordingly prepared for taking the three classes of mortgages and for the three periods, with necessary instructions, and eventually negotiations were consummated securing, in the great majority of cases, the co-operation and services of the county officials. When this was for any reason impossible, the examination and schedules were intrusted either to local experts in records, such as responsible abstractors or conveyancers, or to special agents of the bureau sent from place to place. In fifteen counties only was it impossible to enlist the services of local examiners; in the remaining eighty-seven counties the transcripts were made by those who had not only the face of the records, but personal knowledge of the character of many transactions to govern them in making their returns.

In every county save one the transcripts were made direct from the original entries in the books of record, and from a study of the terms and conditions of every instrument. In Cook county, however, this was impossible owing to the enormous bulk of the records, and the amount of time and money required to make a

thorough examination of them. The analysis of the Cook county records would, consequently, not have been undertaken, or would have been made a subsequent and special subject of inquiry, if it had not been found that there were files of certain law and real estate journals extant which contained what purported to be complete lists of all the mortgages recorded each day, and for a series of years.

Inquiry developed a strong presumption in favor of the substantial accuracy of these lists. They had been taken off each day as the instruments themselves were placed on record, and published as official information for business purposes, and there was no reason why they should not, and every reason why they should be what was claimed for them, literal transcripts of the record actually made each day.

By courtesy of the persons controlling them, access was obtained to complete files of the *Chicago Daily Law Bulletin* for the years 1887 and 1880. These contained, for the most part, the same set of details which in other counties were taken from the records, the principal exception being that for the year 1887 the mortgages for deferred payments on real estate were not indicated. In the files of 1880 this distinction was made to appear, and in every respect the lists of this year were found complete as to the items desired. It was impossible to procure any data as to 1870, because of the destruction of all records by fire in 1871; and as the two succeeding years were exceptional in every respect which influences the volume of mortgage business, attention was directed to the year 1875; not, however, as really a normal year, but only as less disturbed by the consequences of the great fire than the preceding years; and mainly for the purpose of obtaining statistics for three periods, in this county, as well as in others. As the journal referred to, however, had not begun to publish the records in 1875, recourse was had to the files of the *Real Estate and Building Journal*, which were found to contain the number and amounts of all mortgages recorded in that year and nearly all the details desired, concerning them, the items as to which they were in some measure deficient being the term and rate of interest.

The statistics of Cook county, it will thus be seen, are not compiled from original records, but from the sources indicated, and for the reasons given, and owing to this fact the schedules were

not uniformly filled. For the year 1887 the files fail to indicate mortgages made for purchase money; the separation on this line for this year is accordingly made arbitrarily to correspond with that in 1880 and 1875, for both which years the proportion of this class of mortgages is given. On the other hand the files for 1875, while otherwise full, failed to give, save for about ten per cent. of the whole, the term and rate of interest on mortgages for lots. The computation of those averages is consequently made from a part only, and applied to the whole number of mortgages in that class. For the year 1880 the files of the *Law Bulletin* from which the schedules were made, were full as to all desired details, but the total number and amounts for the year were found to be so much less than for either of the other years, that some uncertainty was felt as to the degree of confidence to be placed in them. Subsequent inquiry, however, led to the discovery of a volume containing the issues of the *Real Estate Journal* for the same year, and an examination of the lists of mortgages therein published showed totals substantially the same as those of the *Law Bulletin* for the same period. This was regarded as sufficient confirmation of the *prima facie* correctness of the files of both journals.

In four counties besides Cook, the public records have at various times been destroyed by fire, which in turn has correspondingly impaired the schedules from those counties; they are Cumberland, Hardin, LaSalle and Wayne. In LaSalle county, however, the loss was not recent, and it was only necessary to substitute the records of 1875 for those of 1870 which are now wanting. In the other three counties the only records available for this classification were those of 1887, which were taken. In order, however, to complete certain State tables for other years, the totals for 1887 have been carried into the tables for 1880 and 1870, though not without marginal explanation of their source and character.

In prosecuting this work the duty of the examiners employed by the bureau has been simply to transcribe, on blanks prepared for them, the facts as found upon the records; the examination and corrections of these returns, the analysis and classification of their contents, the reduction of the whole mass to order, and the tabulations, computations, verifications and deductions which enter into the results here given, constitute the work performed in the office of the bureau.

CHAPTER II.

ANALYSIS OF THE STATE TABLES.

The results of this investigation are presented in the following pages, first, in tables for the whole State, by counties; and subsequently in a series of tables giving the facts and deductions for each county separately. The State tables are arranged in groups for each of the three years, with a supplementary group of comparative tables. From these may be obtained the statistics, original and derived, of mortgages on lands, lots and chattels, for each of the respective periods for each county and the State, and in the comparative tables following, the relative indebtedness of counties at each period.

Special tables are also presented showing the percentage of total acreage in each county under mortgage, and the amount of incumbrance compared with the average value; also the number and distribution of building and loan association mortgages recorded in the State, and the number and distribution of mortgages executed to non-residents of the State.

For each of the three periods there are six general tables, showing consecutively and separately, for lands, lots and chattels, the exact data as transcribed from the county records, and the derived totals of existing indebtedness, principal and interest, with the average term and rate of interest, and the character and amount of property incumbered, in each county. These tables are supplemented by a tabular separation of all mortgages given for borrowed money from those given for part of purchase money, and

chattel mortgages are subjected to a special analysis on the basis of the kind of property pledged. From the specific details of these tables some of the leading summaries may be cited.

MORTGAGES OF 1887.—TABLES I-VI.

Beginning at the point of greatest present interest, an examination of the tables for 1887 discloses the fact that there were executed and placed upon the mortgage records of 102 counties in Illinois during that year, a total of 125,923 mortgages, of which 25,334 were mortgages upon lands, 38,326, mortgages upon lots and 62,263, mortgages upon personal property. These mortgages were given to secure the gross sum of \$117,152,857; of this amount \$37,040,770 was secured by 2,178,532 acres of land; \$62,754,914 was secured by 65,066 lots and blocks, and \$17,357,173, by miscellaneous personal property. The average or equivalent term for which each class of mortgages was made, as deduced from the actual terms recorded, is found to be, for mortgages on lands 3.844+ years; on lots 3.807+years, and on chattels 14.32+months. The average rate of interest for each class is, for mortgages on lands 6.90+per cent.; on lots 6.51+per cent., and on chattels 7.82+per cent.

These are the facts as taken from the books of record and reduced to their totals and averages. The same tables, however, present the deductions made as to the presumptive total of mortgages in force, computed, upon the hypothesis stated, for each county and each class. The results reached by this process may be formulated for the State as follows:

TOTAL INDEBTEDNESS—1887.

CLASSES.	Whole number of mortgages.	WHOLE AMOUNTS.			Property Incumbered.
		Principal.	Interest.	Total.	
Lands	92,777	\$142,400,800	\$4,919,754	\$147,320,554	8,082,794 acres.
Lots	148,750	258,922,039	7,782,788	246,704,827	237,386 lots.
Chattels	74,740	20,780,779	1,623,408	22,404,187
Totals	316,267	\$402,063,118	\$14,325,950	\$416,379,068

In order to indicate at once the proportion of this gross incumbrance which rests upon the property of Chicago and the county in which it lies, and that which rests upon the property of the remainder of the State, a separation is made of the total of mortgages recorded in Cook county, from those elsewhere recorded, as follows:

CLASSES.	PLACES.	Whole number of mortgages.	WHOLE AMOUNTS.			Property incumbered.
			Principal.	Interest.	Total.	
Lands.....	Cook County.....	2,388	\$18,667,202	\$584,288	\$19,251,485	116,228 acres
	Outside Cook County.	90,369	123,738,096	4,385,471	128,068,569	7,966,566 "
Lots.....	Cook County.....	77,690	191,496,506	6,060,864	197,557,370	126,069 lots
	Outside Cook County.	65,060	47,426,588	1,731,924	49,147,457	111,287 "
Chattels...	Cook County.....	40,822	10,498,522	823,678	11,268,200
	Outside Cook County.	33,918	10,291,257	799,780	11,090,987
Totals...	Cook County.....	120,900	\$220,603,230	\$7,488,526	\$224,072,065
	Outside Cook County.	189,367	181,449,888	6,857,125	188,307,013

It thus appears that of the total registered indebtedness of the State somewhat more than half, or 54.8 per cent. is found in Cook county. The aggregate amount of mortgages on lots in this county is four times as much as all the other mortgages on lots in the State, and there are more chattel mortgages recorded in Cook county than in all the State besides; though the amount represented by them is very nearly the same in both instances. Of mortgages on lands, however, the amount in Cook county is only 13+per cent. of the whole, and this amount is on a still smaller percentage of the total number of acres, owing to the greater relative value of the lands.

From the tables showing the separation of mortgages given for loans from those given for part of purchase money the following results appear for the State at large:

CLASSES.	FOR LOANS.		FOR DEFERRED PAYMENTS.	
	Number.	Amounts.	Number.	Amounts.
Lands.....	79,109	\$122,123,728	18,668	\$25,196,326
Lots.....	92,685	171,935,592	50,066	74,769,235
Chattels.....	53,464	18,143,569	21,276	4,210,618
Totals.....	225,253	\$312,202,889	89,009	\$104,176,179

In brief the amount of all mortgages given for part of purchase money is found to be one-third of the amount given for loans,—the greater proportion of them being naturally found in mortgages placed on lots. These totals, however, being designed to show the aggregate indebtedness, include both the principal amount of the given mortgages, and the unaccrued interest, which is assumed to be the interest for half the given term. Omitting this element from the foregoing totals, and the following sums appear as representing the face of the given mortgages only:

CLASSES.	FOR LOANS.		FOR DEFERRED PAYMENTS.	
	Number.	Amounts.	Number.	Amounts.
Lands.....	79,109	\$118,045,581	13,668	\$24,354,769
Lots.....	92,685	166,511,025	50,065	73,411,014
Chattels.....	53,464	16,826,346	21,276	3,904,433
Totals.....	225,258	\$301,382,952	85,009	\$100,670,216

But in this respect as in others the mortgages of Cook county present so many points of difference from those of the remainder of the State, that in order better to observe the influence of urban conditions, a separation is also here made of the totals for loans and for deferred payments in Cook county and outside of it:

CLASSES.	PLACES.	FOR LOANS.		FOR DEFERRED PAYMENTS.	
		Number	Amounts.	Number.	Amounts.
Lands.....	Cook County.....	2,007	\$14,933,762	381	\$3,733,440
	Outside Cook County....	77,102	103,111,769	13,287	20,621,329
Lots.....	Cook County.....	54,654	128,834,706	23,086	52,661,439
	Outside Cook County....	38,031	27,676,319	27,029	19,749,575
Chattels...	Cook County.....	24,822	8,456,013	16,000	1,933,509
	Outside Cook County....	28,642	8,370,333	5,276	1,930,924
Totals...	Cook County.....	81,483	\$162,224,842	39,417	\$58,378,388
	Outside Cook County....	143,775	139,158,060	45,592	42,291,823

Some noticeable features of this analysis are, that, in the case of lands, the proportion of indebtedness on account of deferred payments is somewhat greater in Cook county, while in the case of lots much the greater portion of deferred payment mortgages is outside of Cook county. In regard to chattel mortgages, the amounts involved are about equal, but the number given for part

of purchase money is three times as great in Cook county as in all the State besides. The totals show that deferred payment mortgages in Cook county are 36 per cent. and outside of Cook county 30 per cent. of the amounts of mortgages for loans.

MORTGAGES ON LANDS, 1887.—TABLE I.

The term "lands" in this connection embraces all acre-tracts of land as distinguished from town lots, blocks and subdivisions, and is consequently, in general, equivalent to farm lands. The exception is that in the vicinity of large cities, notably Chicago, certain lands are held for speculation rather than cultivation, and possess a value as suburban property which practically takes them out of the class of farm lands, though they necessarily appear in that category here. The number of acres of this kind is relatively small, but their value as security and the consequent incumbrance upon them is relatively great.

For this reason the summaries obtained for mortgages on lands in Cook county, including Chicago and its environs, both in their number and amounts, are exceptional in character, and in no true sense indicative of the amount of farm mortgages in that county. The degree of influence exerted by the suburban lands upon the totals for all lands in Cook county, is shown by the fact that in the State outside of Cook county the average incumbrance on lands actually mortgaged is \$15.53 per acre, while in Cook county the average incumbrance is \$165.64 per acre. In any attempt, therefore, to arrive at the measure of the mortgage indebtedness on the farm lands of the State, the statistics of land mortgages in Cook county should clearly be omitted, as a disturbing element in the calculation; and, to obtain still greater accuracy in the result, some allowance should doubtless also be made for the acres, not in farms, adjacent to other cities and towns. But as there is no way of ascertaining the number of these, and as from the nature of the case it must be exceedingly small in comparison with the total of acres, no attempt is made to eliminate other suburban acres than those of Cook county.

The statistics of acres incumbered, as found in subsequent tables, may be reduced to the following abstract:

	Mortgages.	Amounts.	Acres.
THE STATE	92,777	\$142,400,300	8,082,794
Cook county.....	2,388	18,667,202	116,228
Outside Cook county.....	90,389	123,733,098	7,966,566
For deferred payments...	13,287	20,621,329	1,001,726
For loans.....	77,102	103,111,769	6,964,840

The total number of acres of land reported to the State Auditor in 1887 as having been assessed for purposes of taxation was 34,575,903, of which 494,723 were in Cook county, leaving 34,081,180 acres as the total embraced in the remaining counties of the State. This is exclusive of the area occupied by cities, towns and villages, the distinction between lands and lots in the assessment schedules corresponding with that in the mortgage schedules.

The total acreage thus shown is somewhat more than four times the acreage under mortgage—the latter being 23+ per cent. of the whole, but the number of acres mortgaged for loans only, outside of Cook county, is 20+ per cent. of the total acres in the same territory, which acres more nearly conform to the total of farm lands.

As to the aggregate value of these lands, it is notorious that the valuation returned by the township assessors is neither the cash value, nor any uniform percentage either of the cash or nominal value. It is rather an arbitrary and capricious undervaluation, intended to obscure rather than declare the facts, and in this entirely successful. Whatever other purpose the assessed valuation may serve, it affords no true index to real values either of land or personal property in this State, and can not properly be used as a basis of computation or comparison. In taking the last census, however, an attempt was made to aggregate the values of all farms, improvements and products for all States, for the one year 1879-80; and this, though now somewhat out of date, is the only record approximating an authentic statement of the value of farm lands and their products in this State.

The census aggregate for the value of farms, including lands, fences and buildings, for Illinois is \$1,009,594,580, and for the State exclusive of Cook county \$979,703,337. The aggregate mortgage indebtedness on substantially the same property is now \$123,733,098, of which \$103,111,769 is for borrowed money, and \$20,621,329 is for deferred payments of purchase money.

Stated concisely, the sum of all mortgages on lands, including those in Cook county, is equivalent to 14.1 per cent. of the total value of all lands as reported for the census in 1880; the sum of all mortgages on lands outside of Cook county, is equivalent to 12.6 per cent. of the value of the land, and the sum of all mortgages given for loans only is equivalent to 10.5 per cent. of that value. This last class of mortgages, which practically represents the farm mortgages of Illinois, is thus seen to cover 20+ per cent. of the total acreage, and to secure a gross amount equivalent to 10.5 per cent. of the total value of that acreage as reported in 1880.

Another point of view from which to obtain a proper conception of the relative magnitude of this mortgage debt is obtained from the census estimate of the home value of the farm products of Illinois for the one year 1879. The aggregate for this item, not including the products of Cook county, is \$200,280,164; in other words, the total value of farm products, on the farm, for one year, as indicated by the products of 1879, is 61.8 per cent. greater than the total of mortgage indebtedness on all lands. But this is the product of a total of 26,115,154 acres, while the debt rests upon 7,966,566 acres, the proportionate annual revenue from which would be \$61,077,006, or one-half the mortgage debt resting on the acres actually incumbered. A final consideration in this connection is that in addition to the agricultural products of the surface there are mineral products equally from the land, though from below the surface. The value of the coal mined in this State in 1887 was \$11,152,596, at the mine, and, as many of the mortgages on lands are made by the coal companies, this item should be added to the surface revenues of the land to complete the comparison with the debt on the surface, making a total annual income of \$72,229,602 as an offset to a total debt of \$123,733,098, running for an average term of 3.844+ years and bearing interest at the average rate of 6.9+ per cent.

The following are the counties, exclusive of Cook, which show the greatest amounts of land mortgages in force, the same being those which have two millions or more of incumbrance on lands. In the same connection is shown the whole number of acres in each county, the aggregate value of the same, and the value of products derived therefrom in 1879:

Counties.	Amounts of Mortgages.	Acres in the county.	Valuation.	Annual product.
Livingston.....	\$4,824,742	655,312	\$19,264,802	\$4,506,524
LaSalle.....	4,132,183	710,280	30,899,423	5,223,608
Peoria.....	3,523,087	390,854	19,389,849	2,392,841
Iroquois.....	3,514,359	704,019	16,644,298	3,863,730
Sangamon.....	3,199,689	551,750	21,608,244	3,850,137
Champaign.....	3,062,770	639,275	18,361,722	4,280,422
Bureau.....	3,044,381	543,960	24,344,735	3,973,662
McLean.....	2,960,151	739,133	23,569,531	5,287,795
Will.....	2,811,762	525,929	20,669,338	3,313,441
Kane.....	2,729,848	330,916	15,887,707	2,770,000
Henry.....	2,629,356	515,427	21,073,766	3,806,470
Knox.....	2,553,858	448,484	16,828,026	2,676,868
Vermillion.....	2,529,816	564,183	15,702,103	3,359,885
Whiteside.....	2,499,457	417,501	14,911,566	2,692,635
Kankakee.....	2,328,335	420,344	10,346,321	2,232,860
Fulton.....	2,266,480	556,332	16,481,781	3,000,180
Ogle.....	2,217,821	479,202	19,332,190	3,542,419
Lee.....	2,184,977	477,226	17,368,069	3,038,171
Tazewell.....	2,145,521	411,381	14,442,387	2,671,874
Logan.....	3,129,252	390,744	18,765,632	2,728,895
Stephenson.....	2,048,631	354,600	15,258,019	2,498,485
Totals	\$59,308,836	10,807,767	\$382,091,637	\$71,666,790

These twenty-one counties, while incumbered with the greatest amount of mortgage debt, at the same time possess, with few exceptions, the greatest wealth in agricultural lands. The general deduction from this grouping is that the counties enumerated, constituting 20 per cent. of the whole number, contain 31 per cent. of the total acres, represent 33 per cent. of the total value, and sustain 41 per cent. of all the mortgage debt of the State.

There are other counties, however, of the first class in wealth and magnitude, which do not appear in the list of counties having correspondingly great indebtedness. Notable among these are:

Counties.	Mortgages.	Acres.	Valuation.	Annual product.
St. Clair.....	\$1,177,381	413,717	\$19,518,076	\$4,002,385
Pike.....	1,013,235	510,034	14,551,712	3,452,726
Macoupin.....	1,219,562	536,827	15,492,674	3,610,616
Adams.....	1,500,599	527,584	17,596,477	3,294,250
Morgan.....	1,506,497	353,352	14,836,618	2,189,230

The counties in which the least indebtedness on lands is found are those in the southern extremity of the State, and naturally those in which agricultural lands are of the least value. There are thirteen counties in each of which the total of mortgages in force is less than \$200,000, and they appear in the following order:

Counties.	Mortgages.	Acres.	Valuation.	Annual product.
Hardin.....	\$15,296	108,716	\$535,790	\$196,012
Pope.....	81,186	231,394	1,590,840	676,927
Massac.....	87,818	145,174	1,296,135	456,132
Alexander.....	68,823	118,960	968,535	334,348
Pulaski.....	74,080	108,746	1,102,815	310,940
Franklin.....	101,792	253,521	2,662,764	868,108
Johnson.....	107,417	206,788	1,567,461	479,307
Saline.....	153,425	236,100	1,949,390	591,418
Edwards.....	155,198	139,944	2,219,201	654,473
Wabash.....	168,864	137,515	2,504,263	766,896
Williamson.....	171,015	264,874	2,444,368	744,653
Calhoun.....	197,896	163,599	2,235,970	544,979
Richland.....	198,530	224,101	4,150,702	765,334
Totals.....	\$1,541,687	2,886,432	\$26,228,284	\$7,378,527

In this group of counties there are 2,336,432 acres of land, and an average mortgage indebtedness of 66 cents per acre, while in the first group there are 10,807,767 acres with an average incumbrance of \$5.48 per acre. The difference in the reported value of the land in the two sections is not so great as this, but there is reason for believing that the census estimate of the values for 1880 would be too high for the present value of the land in many of the southern counties.

In the first group the number of acres actually mortgaged is 30 per cent. of the entire acreage; in the last group the number of acres mortgaged is only 11 per cent. of all the acres.

MORTGAGES ON LOTS, 1887.—TABLE II.

Of the total number of mortgages executed and recorded in Illinois in 1887, there were 33,326, or 30 per cent. of the whole, given on lots, as distinguished from acres; and the amount for which they were given was \$62,754,914, or 53 per cent. of the aggregate of all mortgages for that year. The average term for which these mortgages were made was 3.807+ years, and the average rate of interest for the whole number was 6.51+ per cent. These figures, upon the assumed theorem, indicate a total in force of 142,750 mortgages, for the gross sum of \$238,922,039. As compared with mortgages on lands, it appears that the mortgages on lots were 54 per cent. more in number, and 68 per cent. more in amount.

The county of Cook being the seat of Chicago and its environs, necessarily dominates all other counties and the State itself in the

number and amount of mortgages in this class, and the relation which this county sustains to the remainder of the State in this respect is shown by the following summaries:

Location.	Number.	Amounts.	Lots.
In Cook County.....	77,690	\$181,436,506	128,089
Outside of Cook County.....	65,060	47,425,533	111,237
Totals.....	142,750	\$228,922,039	237,326

In brief, though the number is not greatly in excess, the aggregate amount of mortgages on lots in Cook county is more than four times that of all other mortgages on lots in the State. The counties which rank next in order after Cook are those in which the following cities are located: Peoria, Joliet, Aurora, Danville, Springfield, Bloomington, Rock Island, Belleville, Rockford, Ottawa, Decatur, Quincy, Alton and Freeport.

The deferred payment mortgages on lots constitute 30.3 per cent. of the total in the State, 27.53 per cent. of the total in Cook county, and 41.64 per cent. of those outside of Cook county.

The mortgages on lots for loans, only, omitting interest, aggregate \$166,511,025, of which \$138,834,706, or 83 per cent., is in Cook county; the mortgages for deferred payments aggregate \$72,411,014, of which \$52,661,439, or 72 per cent., is in Cook county.

The influence of this county is especially noticeable in the average rate of interest deduced for this class of mortgages. For the whole State the average is found to be 6.515+ per cent.; but omitting Cook county, it is 7.262+ per cent. In Cook county the interest rate ranges from 2 to 10 per cent.—\$50,000 being found in one loan at the former rate, and \$51,231 being found in 11 mortgages bearing 10 per cent. Over \$15,000,000 are loaned at 5 per cent., and the general average rate is 6½ per cent.

Two Cook county mortgages, nominally on lots, have been omitted from the tables and computations, as exceptional; one of these was for the sum of \$10,000,000, running for 50 years and bearing 5 per cent. interest, given by a street car syndicate, and the other for \$2,000,000, running 20 years and bearing 4½ per cent. interest, given by a syndicate of gas companies, and each covering all the property and franchises of the respective mortgageors.

BUILDING ASSOCIATION MORTGAGES.—TABLE XXII.

The Building and Loan Associations of the State placed on record during the year 6,733 mortgages for the gross sum of \$7,262,446 and covering 9,456 lots and 6,359 acres of land. Of this total business, 2,067 mortgages for \$4,050,213 on 2,713 lots and 4 acres were executed in Cook county. The whole number of associations which appear upon the records of the State as having loaned money in 1887 is 348, of which number 99 were found on the records of Cook county. The number thus found is regarded as small, considering that there have been organized and chartered by the Secretary of State since the passage of the present law in 1879 and up to and including the year 1887 a total of 494 associations, of which 259 have been located in Cook county. In addition to this number, 252 were chartered prior to 1879 under a law which was finally pronounced defective by the courts. There is no public record, however, of the number which have actually proceeded to do business under their charters, nor of the number which have failed, suspended or otherwise closed up their affairs; in other words, no means of knowing, save by the mortgage records, how many of these associations are now in active operation. It is usually supposed that few, if any, of those organized prior to 1879 are still in business, yet 23 of the list found on the records of 1887 were organized prior to that date, and one in 1872. This leaves 325 associations organized since 1879, recorded as doing business in 1887, of which number 229 are outside of Cook county and 96 in that county. This accounts for all of the societies chartered outside of Cook county since 1879 except three, but accounts for less than half of those organized in Cook county. There would seem to be no explanation for this except that a great many charters have been taken out in that county which have not been used, which, it must be admitted, is not fully satisfactory. It is not to be supposed that active associations would fail for an entire year to appear upon the mortgage records of the county in which they are organized, and the presumption is that the real number in active existence in 1887 is indicated by the number which placed mortgages on record during that year.

The number of associations organized since July 1, 1879, has steadily increased each year in the following ratio:

LOCATION.	NUMBER OF ASSOCIATIONS ORGANIZED.									
	1879.	1880.	1881.	1882.	1883.	1884.	1885.	1886.	1887.	Totals.
In Cook county.....	3	7	11	25	30	34	37	54	58	269
Outside of Cook county.....	3	8	11	23	44	31	28	30	57	235
Totals.....	6	15	22	48	74	65	65	84	115	494

The number organized in 1888 is still greater, being 57 in other counties than Cook, and 77 in that county, or 134 in all. This makes a total of 628 of these co-operative building societies organized under the present law, and between July 1, 1879, and January 1, 1889, more than one-half of which came into existence during the last three of these years.

The term within which the mortgages held by associations of this kind ordinarily matures, ranges from 5 to 10 years, and if the number of societies in business, and the amount of business done, had been substantially uniform for the longer period, a mean between these extremes might with propriety be assumed as an average term for the total of mortgages. In fact, however, much the greater number of associations in business in 1887 were of recent origin, as appears from the table above, and it becomes necessary, in order to make even an approximate estimate of the total of these mortgages in force in 1887, to take into consideration the respective dates of organization as well as the reported duration of the several series.

A calculation based upon the length of time for which the several associations in each county have been doing business, and upon the terms reported, develops a fairly presumptive average term for all the building association mortgages on record in each county. The county averages thus found range from 1 to 8 years, and afford an average for the State of 3.8 years. Applying the averages found as multipliers to the amounts actually recorded in each county in 1887, the results indicate a total of mortgages of this class in force at that time in the State of 27,128, for the gross sum of \$27,601,082, and secured by 38,051 lots and 24,147 acres of land. The proportion of these recorded in Cook county is 6,724 mortgages for \$13,175,343, covering 8,825 lots and 13 acres, or 24 per cent. of the whole number, and 48 per cent. of the whole amount.

There is, however, so much uncertainty about several features of this calculation that the conclusions must be accepted as conjectural rather than demonstrable.

The distribution of building association business among the principal cities of the State is in the following proportions:

Chicago.....	\$13, 175, 343	Rockford.....	\$598, 081
Danville.....	1, 366, 663	Beardstown.....	550, 614
Springfield.....	1, 229, 367	Rock Island.....	510, 790
Joliet.....	1, 085, 250	LaSalle.....	406, 609
Aurora.....	918, 970	Shelbyville.....	404, 564
Peoria.....	824, 040	Jacksonville.....	389, 150

The foremost observation in this connection is the recent remarkable increase in the number of these co-operative enterprises. All the records of the State in 1880 contain only 497 mortgages given to building associations, while in the records of 1887 there are found 6,733 such mortgages, or more than thirteen times as many; the gross amount represented by those of 1880 was \$371,-355, and by those of 1887, \$7,262,446, or nearly twenty times as much. The number of associations chartered by the Secretary of State in 1880 was 15, while for the year last past the number was 134.

Assuming the total number now in operation to be those appearing on the mortgage records of 1887 and those which have since then been organized, there would be 482 building and loan associations now doing business in this State. Statistics taken on the subject in New Jersey show that the average number of stockholders in 156 associations was 243 to each, of whom 70 per cent. were living upon the wages of labor. Applied to the associations of Illinois, these deductions would give a total of 117,126 persons as contributing to the maintenance of these enterprises, and sharing alike the risks and rewards which they offer.

CHATTEL MORTGAGES, 1887.—TABLE III.

The total number of chattel mortgages executed in the State during the year of 1887 was 62,263, for the aggregate sum of \$17,-357,173. The various periods for which they were given are reducible to an average term of 14.322+months. The totals for one year increased by this excess over one year give as the presumptive total number of existing chattel mortgages 74,740, and the

total amount as \$20,730,779. Of these totals 40,822 mortgages for \$10,439,522, or in round numbers one-half of the whole, are found in Cook county. The average rate of interest, deduced from the various given rates, for the whole sum is .07825, and the aggregate interest, so far as it appears upon the face of the instruments, would be \$1,623,408 per annum.

The proportion of chattel mortgages given for part of purchase money is 28.3 per cent. of the total amount. Chattel mortgages for loans only are about equal in number and amount in Cook county and in the remainder of the State; but there are more than three times as many deferred payment chattel mortgages in Cook county as in all the State besides.

The chattel mortgages of each county are classified in subsequent tables, according to the character of the property involved, into eight groups, and the following number and amounts are found in each group for the State at large.

Property.	Number.	Amounts.
Livestock and farm implements.....	25,492	\$7,069,602
Household goods and wearing apparel	24,415	3,757,823
Merchandise and fixtures	3,284	2,424,350
Machinery and tools.....	2,074	2,018,345
Growing crops.....	2,073	549,572
Garnered crops.....	410	226,239
Pianos, organs and sewing machines.....	2,890	371,067
Miscellaneous.....	1,625	899,522
Totals.....	62,268	\$17,357,176

The first of these classes embraces, in addition to what clearly comes under that head, horses and wagons and vehicles of all kinds; also traction engines and other power machinery used in farm processes; while the class, machinery and tools, refers more especially to fixed machinery in shops and elsewhere. Pianos, organs and sewing machines are regarded as household goods when included with them in a common mortgage, and only classified as such when mortgaged separately. This class consequently consists almost exclusively of mortgages given to merchants for part of purchase money. The mortgages for garnered crops include only such as are given by farmers or producers; grain in elevators or corn in the cribs of shippers is classified as merchandise. Of the totals of mortgages on live stock and farm implements 90 per cent. is found outside of Cook county; but of the mortgages on household goods and

wearing apparel 91.6 per cent. is found within Cook county, and this is the only county in which any mortgages at all are found on wearing apparel. Of the other classes 73.4 per cent. of all mortgages on merchandise and fixtures is recorded in Cook county; also 61.5 per cent. of mortgages on machinery and tools and 71.9 per cent. of mortgages on pianos, organs and sewing machines.

On the other hand, all mortgages on growing and garnered crops, save four, are recorded in other counties than Cook.

The following figures show the proportion of each class of chattel mortgages in Cook and other counties:

Property.	Place.	Number.	Amounts.
Live stock and farm implements	Cook county.....	2,433	\$781,238
	Other counties.....	23,059	6,308,309
Household goods and wearing apparel.....	Cook county.....	22,839	3,443,411
	Other counties.....	1,576	314,417
Merchandise and fixtures.....	Cook county.....	2,137	1,735,896
	Other counties.....	1,097	648,454
Machinery and tools.....	Cook county.....	759	1,243,089
	Other counties.....	1,315	775,256
Growing crops.....	Cook county.....	4	1,290
	Other counties.....	2,060	543,292
Garnered crops.....	Cook county.....		
	Other counties.....	410	236,289
Pianos, organs and sewing machines.....	Cook county.....	2,104	937,856
	Other counties.....	786	104,311
Miscellaneous.....	Cook county.....	464	351,608
	Other counties.....	1,161	547,919
Totals.....	Cook county.....	30,790	\$7,873,938
	Other counties.....	31,473	9,483,347
The State.....		62,263	\$17,357,175

In Cook county there were found 124 mortgages for \$15,105 on wearing apparel, in amounts ranging from \$10 to \$950.

The 22,839 mortgages on household goods and wearing apparel recorded in Cook county in 1887, analyzed according to the amounts represented in the several instruments, present the following results as to the relative amounts for which mortgages of this class were given:

For am'ts ranging from	\$1 to \$10..	34 mtgs.	For am'ts ranging from	\$350 to \$400..	343 mtgs
"	10 to 15..	53 "	"	400 to 450..	219 "
"	15 to 20..	146 "	"	450 to 500..	174 "
"	20 to 25..	622 "	"	500 to 600..	290 "
"	25 to 30..	891 "	"	600 to 700..	187 "
"	30 to 40..	2,641 "	"	700 to 800..	98 "
"	40 to 50..	2,483 "	"	800 to 900..	89 "
"	50 to 75..	4,611 "	"	900 to 1,000..	88 "
"	75 to 100..	2,823 "	"	1,000 to 2,000..	283 "
"	100 to 150..	2,692 "	"	2,000 to 3,000..	58 "
"	150 to 200..	1,762 "	"	3,000 to 4,000..	25 "
"	200 to 250..	1,145 "	"	4,000 to 5,000..	12 "
"	250 to 300..	642 "	Over \$5,000.....		22 "
"	300 to 350..	530 "			

Total mortgages.....22,839

One-half of the whole number, or 11,381, are thus found to be for amounts less than \$75; 30 per cent. of the whole, or 6,770 mortgages, for less than \$50; while 855 mortgages, or 4 per cent., are for less than \$25 each, and 34 were given for amounts less than \$10,—one of these, and the smallest in the State, being a deferred payment mortgage for \$1 for one month.

MORTGAGES TO NON-RESIDENTS.—TABLES XXIII AND XXIV.

A special distinction noted in this investigation is that between mortgages executed to residents and non-residents of the State. It is recognized that the mortgages executed to non-residents do not constitute all the mortgages held by that class, nor represent the total of foreign capital loaned to the people of this State. On the contrary, mortgages made to resident money lenders may be and frequently are transferred to capitalists or companies of other States, and such transactions do not appear on the records. It is consequently impossible to determine or declare with any degree of accuracy what the whole amount of foreign capital invested in Illinois mortgages may be, though all of it for which mortgages have been given direct to non-resident holders may readily be derived from an examination of the records. How much should be added to this amount for mortgages transferred by local mortgagees to outside parties must be a matter of individual opinion.

The fact is that mortgages are found on the records of this State executed to residents of thirty-five States, besides Illinois, the District of Columbia and six Territories in this country; and to residents of England, Ireland, Scotland, France, Germany, Switzerland, Turkey, Nova Scotia, New Brunswick, Canada, Cuba and Mexico. Yet all these mortgages together constitute only 7 per cent. of the total number, and 11 per cent. of the total amount of the mortgages made by the people of this State. The amount of foreign loans made in 1870 is found to have been greater than either in 1880 or 1887, though the amount in the latter year is greater also than that of 1880. Expressed in per centages the amount of foreign mortgages recorded in 1870 was 81 per cent. more than was recorded in 1880, and the amount recorded in 1887 was 55 per cent. more than that of 1880; but the amount in 1870 was also 17.5 per cent., representing \$7,308,027, more than in 1887.

From the greater number of the states and countries mentioned the amounts loaned in this State are trifling, but from the States of Connecticut, New York and Wisconsin the amounts aggregate 61 per cent. of the total. Next to these States, the greatest amounts come to this State for investment from Vermont, Pennsylvania, Massachusetts, Missouri, Ohio, Indiana, New Jersey, Michigan, Maine and Iowa in the order given. The relative amounts from these several States, invested here, appear as follows:

States.	Number of mortgages.	Amounts.	Acres.	Lots.
Connecticut.....	3,152	\$9,930,683	361,522	563
New York.....	4,080	8,412,693	378,784	673
Wisconsin.....	734	7,198,613	60,675	881
Vermont.....	273	2,463,463	23,659	202
Pennsylvania.....	582	1,946,560	46,223	475
Massachusetts.....	462	1,793,171	36,706	215
Missouri.....	1,117	1,754,845	99,186	739
Ohio.....	660	994,309	49,384	347
Indiana.....	642	895,577	51,297	580
New Jersey.....	479	807,176	52,723	123
Michigan.....	383	668,322	29,779	149
Maine.....	229	516,154	18,616	44
Iowa.....	435	587,391	31,063	317

These amounts constitute 90 per cent. of the aggregate of all mortgages executed to non-residents. The amounts from all foreign countries are small,—that from France, \$225,527, being the largest; and that from England \$103,443, being next. Analyzed geographically, it is found that of the totals represented here, over 10 millions, or 28 per cent. of the whole comes from the border States, Wisconsin, Indiana, Missouri and Iowa. The greater portion of this comes from Wisconsin, and from the funds of a life insurance company in that State, and it is for the most part placed on Chicago property. Missouri takes rank next after Wisconsin in this respect and Missouri money is for the most part placed on lands, the number of acres so incumbered being 99,186.

The average term for which mortgages to non-residents are given is 4.396+ years, this being a materially longer term than that for other mortgages. The aggregates of foreign mortgages in force, computed from the amounts recorded in 1887 with the average term of the same as a multiplier, are 14,976 mortgages for the total sum of \$41,754,557 and secured by 1,417,791 acres of land and 6,269 lots. Of this amount \$18,289,681 is placed in Cook county, and the remainder is distributed throughout the State, more or less of it being found in every other county save one.

The following is a list of the twenty counties which have the largest amounts of mortgages on real estate in the hands of non-residents. The total of all real estate mortgages is given in connection with the total of foreign mortgages to show the relative amounts of each:

Counties.	Foreign mortgages.	Total mortgages.	Counties.	Foreign mortgages.	Total mortgages.
Champaign.....	\$1,465,960	\$3,558,799	Vermilion.....	\$649,922	\$4,750,872
Livingston.....	1,076,316	5,319,122	Coles.....	681,365	1,353,036
Douglas.....	901,877	1,704,225	Henry.....	600,128	3,020,886
Iroquois.....	898,684	3,724,851	Mason.....	544,326	1,087,504
Will.....	880,457	6,147,648	Moultrie.....	504,234	1,101,115
LaSalle.....	866,764	5,709,935	Lee.....	492,187	2,464,955
McLean.....	862,919	4,967,863	Kankakee.....	473,186	2,888,945
Piatt.....	773,378	1,667,039	DeWitt.....	441,690	1,380,301
Rock Island.....	741,576	3,177,970	Peoria.....	437,347	7,688,839
Logan.....	671,537	2,979,698	Ford.....	434,131	2,002,372

MORTGAGES OF 1870 AND 1880.

TABLES VII-XVII.

The statistics of mortgages taken from the records of 1870 and 1880, respectively, are uniform with those taken for 1887, and the tables for the three years correspond in every particular. The statistics of 1880 are embraced in Tables VII-XII, inclusive; those of 1870 in Tables XIII-XVII, inclusive, and succeeding these is a series of comparative tables showing the figures for each of the three years in juxtaposition.

The most noticeable fact developed by this examination of the records for the three periods is that the amount of mortgage indebtedness incurred in 1880 was materially less than that of either 1870 or 1887, although the number of mortgages for the two former years was nearly the same. The totals as summarized for mortgages of all classes for the three years are these:

Years.	Number.	Amounts.
1870.....	175,962	\$304,423,790
1880.....	180,790	196,654,074
1887.....	310,267	402,068,118

A further scrutiny of the tables, however, shows that the falling off in recorded mortgages for 1880 was largely in Cook county. Eliminating the returns of this county from the totals given and the facts for the remainder of the State appear in the summaries following:

Years.	Number.	Amounts.
1870.....	108,618	\$125,331,460
1880.....	136,515	132,499,320
1887.....	189,367	181,449,888

This shows for the aggregate of all mortgages outside of Cook county an increase in amount of 5.7 per cent. between 1870 and 1880, and an increase in amount of 37 per cent. between 1880 and 1887. Analyzing these figures somewhat further it is found that the relative amounts of land mortgages outside of Cook county, or in other words the mortgages on farms, have increased during the period under consideration as follows:

	Years.	Number.	Amounts.
Lands.....	1870.....	68,377	\$95,721,008
	1880.....	80,759	103,525,237
	1887.....	90,899	123,738,098

That is to say, the increase in amount during the first interval was 8.2 per cent., and in the last 19 per cent.; but the increase in the *number* of mortgages, and consequently in the number of persons involved, was during the first interval, 22 per cent. and during the last 12 per cent.

The most marked instance of decline is found in 1880, in mortgages on lots, in Cook county. The number and amount of mortgages of this class recorded in Cook county in 1880 was less than half the amount recorded in 1875, while in 1887 the number recorded was more than three times that of 1880, and the gross amount was correspondingly increased.

The increase in the number of chattel mortgages outside of Cook county from 1870 to 1880 was 38 per cent., and from 1880 to 1887 the increase was 31 per cent.; in amount there was little change from 1870 to 1880, but an increase of 34 per cent. in 1887. In

Cook county there was a marked falling off in the amount of chattel mortgages in 1880, followed by an equally marked increase in the amount for 1887.

Comparisons of the totals for 1870 with those of subsequent years should be made with knowledge of the fact that the figures in the tables of 1870 for Cook county and for LaSalle county are really those derived from the records of 1875. The necessity for this arrangement arises from the fact that in both these counties the records for 1870 have been destroyed by fire. In Cumberland, Hardin and Wayne counties, also, the public records have been similarly destroyed, and in these instances neither the facts for 1870 nor for 1880 are extant. In order to perfect the State tables for these two years the figures for 1887 have been arbitrarily used in both. No significance therefore attaches to them as indicating the relative situation in those counties.

An examination of the tables will show a great diversity among counties as to the relative amounts of mortgage indebtedness in different years. The foregoing figures relate only to the facts within and without Cook county. The remaining counties, however, present contrasts and differences in the matter of mortgage incumbrance as great as the variety in their character and resources. In the matter of mortgages on lands, twenty-four counties show less incumbrance in 1880 than 1870, among which are Carroll, Champaign, DeWitt, Ford, Iroquois, Kendall, LaSalle, Livingston, Logan, Macon, Mason, McLean, Ogle, Piatt, St. Clair and Vermilion. Thirty-seven counties show less incumbrance on lands in 1887 than in one or the other of the former years, among which are Boone, Bureau, Christian, DeKalb, DuPage, Ford, Kankakee, LaSalle, Lee, Macon, Macoupin, Madison, Marion, McHenry, McLean, Montgomery, Ogle, Perry, Piatt, Pike, Rock Island, Stark and Winnebago. Some of the counties which show the greatest increase of land mortgages in 1887 are Carroll, Cass, Clay, Coles, Cook, Fulton, Hancock, Iroquois, Kane, Livingston, Logan, Menard, Mercer, Morgan, Moultrie, Peoria, Putnam, Saline, Sangamon, Schuyler, Scott, Shelby, Tazewell, Vermilion and Whiteside.

Referring to the tables showing the relative indebtedness for loans and for deferred payments, in the years prior to 1887, and deducting the interest item from those tables, the following facts

appear in regard to the number and amounts of mortgages on lands exclusive of those in Cook county.

MORTGAGES ON LANDS.	FOR LOANS.		DEFERRED PAYMENTS.	
	Number.	Amounts.	Number.	Amounts.
1870.....	51,011	\$69,110,556	15,366	\$26,610,438
1880.....	68,143	\$83,855,442	13,957	19,669,795
1887.....	77,102	103,111,769	13,287	20,621,329

In brief the amount of the deferred payment mortgages in 1870 was equivalent to 38.5 per cent., in 1880 to 23.4 per cent., and in 1887 to 20 per cent. of the respective amounts in those years for loans.

The comparisons made between the census valuations of 1880 and the total incumbrance on lands for 1887 may be made with greater force for the indebtedness of 1880, the year for which the census estimates were made. The aggregate valuation of farms outside of Cook county as reported to the Census Bureau in 1880, was \$979,703,337; the aggregate mortgage indebtedness on substantially the same lands, for borrowed money, at the same time, was \$83,855,442, or 8.56 per cent. of the total value. As compared with this value, the corresponding debt of 1887 was found to be 10.52 per cent. of it.

The increase in mortgage indebtedness on lands for loans was, from \$69,110,556 in 1870 to \$83,855,442 in 1880, or 21 + per cent; from 1880 to 1887 the increase was from \$83,855,442 to \$103,111,769, or 23 + per cent.

As to the relative value of lands in Illinois in 1880 and 1887 there are no statistics, but many and diverse opinions. There is also, doubtless, a great diversity as to the facts in different portions of the State, so that what is true in one latitude may be far from true in another.

In the absence of exact facts on the subject, some effort has been made to obtain the judgment of persons qualified to have intelligent information in such matters, with the view merely of affording such light on the probable facts as may be derived from a consensus of opinion. To this end inquiry has been made in all parts of the State, among those familiar with real estate trans-

actions and the loaning of money on farms, for local estimates of land values for the two dates. From these sources such estimates have been received from sixty-one counties, very evenly distributed geographically over the State, and containing, collectively, 20,828,874 acres, or about two-thirds of the total area. So far as these statements can be reduced to conformity they indicate a decline in the value of lands in such counties, in the southern part of the State, as have in recent years sustained failures in crops from drought, chinch-bugs or other causes, and in general a decline from former prices in all the poorer counties in the south,—the exception being in localities where railroads have recently been built. In some of the central, western and northern counties where land is fertile, highly improved and valuable, and in which there has been a marked tendency to emigration, while there has been no depreciation in the intrinsic value of the land, there has been a disposition to sell, at a sacrifice if necessary, in order to invest in cheaper lands in western states; a reaction, however, in this respect, is noted at present and the actual values are reported as substantially unchanged from those of 1880. There are other sections of the State, notably the central and eastern, in which material value has been added to the land by tile and surface drainage, improvements and developments, the degree of which is variously reported as equivalent to from 25 to 50 per cent. over the valuations of 1880.

These are necessarily very broad generalizations, but they are warranted apparently by the tenor of reports received. Within each of these districts there are counties presenting exceptional features and others in which a difference of opinion is expressed on the same property, but, the trend of sentiment is in the direction indicated for the districts mentioned. A calculation based on the percentages of gain or loss in the value reported in the several counties, applied to the acreage in those counties, and omitting counties in which the value is reported as unchanged, develops a net gain in value, constructively for the whole State, of 6.2 per cent. since 1880. An increase is reported in the land values of twenty-five counties; a decrease is reported in 20 counties, and in sixteen counties values are said to be practically unchanged. The statement is very general that the intrinsic value of farms has increased by reason of tiling and surface improvements, the

growth of towns and increase of population, and that where depressions in selling prices exist they are largely owing to local and temporary causes. As instances of very marked changes in values, the lands in McLean county are reported to have gained at least 75 per cent. in value since 1880, and this judgment is expressed, after reference to records and experience, by probably the best authority on that subject in the county; on the other hand, a critical observer and long resident of Madison county believes the value of farm lands in that county have depreciated 33 per cent. in the same interval, owing to recent failures of the wheat crop and the emigration of farmers' sons and renters.

The financial agent of a farm-loan company, who has traveled over the State constantly for seven years, believes that all lands have declined in value,—those north of the Wabash Railroad from 7 to 10 per cent., and those south of that line twice as much. On the other hand, equally good authority, a firm which has been making loans on Illinois farms for many years, declares that in the territory north of the Ohio and Mississippi Railroad, and east of the Illinois river, there has been a gain of at least 25 per cent.

No statistical value is claimed for any of these statements, but as expressions of opinion, they come from those best qualified to know the facts, and from every quarter of the State. As a forecast of what may be developed as to the value of lands in Illinois by the coming U. S. Census, these estimates point to a possible gain of about 10 per cent. for the State at large, in the decade ending 1890. The increase during the ten years from 1870 to 1880 as computed by the census officials, after reducing the valuations of 1870 to a gold basis, was 24 per cent.

The ratio of increase in the mortgage incumbrance on farms between 1870 and 1880, as shown in a former paragraph, was 21+ per cent., and that between 1880 and 1887, 23+ per cent., which according to the best information obtainable, is more than twice as much as the ratio of increase in the value of the land.

The relative number of acres mortgaged outside of Cook county at the several periods appears as follows:

1870.....	6,437,327
1880.....	6,970,190
1887.....	7,966,566

The average rates of interest for the State at large which have prevailed in each class and for each period, are:

	Lands	Lots.	Chattels.
1870.....	9.436 +	9.864 +	9.851 +
1880.....	7.608 +	7.644 +	7.969 +
1887.....	6.909 +	6.514 +	7.826 +

The average time for which mortgages in the different periods and classes have been made to run, is as follows:

	Lands.	Lots.	Chattels.
1870.....	3.119 + years	2.413 + years	13.72 + months
1880.....	3.547 + years	2.940 + years	13.56 + months
1887.....	3.844 + years	3.807 + years	14.32 + months

The foregoing synopsis of the conclusions reached in this investigation indicates the ground covered and the specific information sought. Subsequent tabulations for the State at large, and for the several counties separately, afford full information in detail as to the specific facts and general results developed by this inquiry.

CHAPTER III.

STATISTICS OF MORTGAGES IN ILLINOIS.

GENERAL TABLES FOR THE STATE.

TABLE I—Mortgages on Lands—1887.

PART II.

STRIKES AND LOCKOUTS

IN ILLINOIS. 1881-1886.

STRIKES AND LOCKOUTS.

CHAPTER I.

SYNOPSIS OF THE TABLES.

In making a study of the statistics of strikes and lockouts in Illinois, as prepared by the Bureau of Labor in Washington, and presented in the following tables, it is observed that they cover a period of six years from January 1, 1881, to December 31, 1886, and are grouped primarily by years, by industries, and by causes. One difficulty, however, is presented at the outset and that refers to the enumeration of these events. It must first be determined what has constituted the unit or basis of tabulation. A wage difficulty that closes a bake-shop and involves the labor of five men is undoubtedly a strike; and yet it ought not to be given the same weight, even in tabulation, as the Southwestern railroad strike, or the great eight-hour struggle of May, 1886. One strike may close an obscure restaurant, another shut down every flouring mill in the State, and under the usual methods of tabulation each would be set down as a strike. On the other hand if the establishment be taken as the unit, as is done in these tables, then the aggregate number of establishments closed must not be taken as the number of distinct strikes, in the ordinary sense of that term, since a strike ordered by an extensive organization may close a hundred establishments, and yet be but one strike, in the sense that it is in obedience to one general order.

The method adopted by the Tenth Census takers was to tabulate each clearly defined independent strike, as such, without reference

to its extent or the number of establishments involved. The method adopted in the compilation of the tables here presented, has been to give the number of establishments effected without reference to the number of distinct strikes. Hence the number of strikes as commonly understood, is not to be definitely ascertained from an examination of these tables, though the number of establishments involved is accurately given with all other essential elements in each case. One line in the tables represents therefore either a strike in one establishment, or a general strike in several establishments, or in such a number of establishments in a general strike as could be grouped into one line, all features being essentially the same; successive lines below being used for such single establishments involved in the general strike as present features rendering them not susceptible of being accurately grouped with others. The establishment, as the unit, is not, however, lost sight of, and this grouping of several into one line is a mere condensation by adding together all the establishments in a strike presenting features identical. Any essential variation has been considered sufficient to warrant giving to the establishment a separate line.

The points covered by the investigation include the character of the industry carried on by the establishment affected; the location; the cause or object of the strike; whether or not it was ordered by a labor organization, or in cases of lockouts, by combinations of managers; the number of days the establishment was closed; the dates of the beginning and ending of the strike; the degree of success attained by the strike or lockout; the loss to employers and employes, together with the amount of assistance received by the latter from strike benefit funds; the number of employes before and after the strike or lockout; the average daily pay before and after; the number of persons actively engaged in the strike, together with the number of persons involved in the strike; the number of new employes after the strike, and the number of employes brought from other localities to take the places of strikers; also the number of weekly working-hours both before and after the strike.

Of these facts, as found in the tables, a summary by years is presented as follows:

TABLE I.—*Summary of Strikes in Illinois, by Years.*

YEARS.	ORDERED BY LABOR ORGANIZATION.		ESTABLISHMENTS.				DURATION (DAYS).

3 1883.....	20,135	45	20,181	1,952	15	1,967	1,334
4 1884.....	8,064	8,064	859	859	325
5 1885.....	21,645	425	22,070	2,593	78	2,671	1,532
6 1886.....	105,838	2,683	108,516	2,345	33	2,378	3,081
Total.....	188,592	3,313	191,905	16,429	161	16,590	7,466

An examination of the foregoing table reveals the fact that 2,768 establishments in this State have been involved in strikes during the period covered by the investigation. Of these 271, or 9.79 per cent., occurred in 1881; 206, or 7.44 per cent., in 1882; 576, or 20.86 per cent., in 1883; 429, or 15.45 per cent., in 1884; 226, or 8.16 per cent., in 1885; 1,060, or 38.29 per cent., in 1886. Of the 2,768 establishments 1,957 were completely closed by the strike, the aggregate number of days closed being 42,106, an average of 21.5 days for each establishment. In 2,324 instances the strike was ordered by labor organizations, while 444 strikes were not so ordered. Of the strikes of 1881, 174, or 64.20 per cent., were ordered by labor organizations; 132, or 64.08 per cent., of those of 1882 were so ordered; 92.71 per cent. of those of 1883; 90.44 per cent. of those of 1884; 64.16 per cent. of those of 1885; and 89.72 per cent. of those of 1886.

For these fluctuations in the number and percentages of strikes inaugurated by labor organizations year by year, it is difficult, if not impossible, to discover an underlying cause. The inference would, of course, be that the extent and cohesive power of labor organizations in the State varied and fluctuated with these percentages. Other known facts, however, disprove this view, and leave the above facts standing alone, and without a probable explanation. To bring out more clearly one feature, thought to be of interest, the following table, showing the number and percentages of successful strikes, by years, ordered by labor organizations, has been prepared:

TABLE I.—*Proportion of Strikes Ordered by Labor Organizations.*

Years.	Whole No. of strikes.	Successful.	Partly successful.	Failed.	Percentage of success- ful strikes.
1881.					
Ordered	174	86	35	53	49.42
Not ordered.....	97	68	29	70.1
Total.....	271	154	85	82	56.83
1882.					
Ordered	132	77	3	52	58.5
Not ordered.....	74	39	6	29	52.7
Total	206	116	9	81	56.31

Table I.—Continued.

1883.					
Ordered	534	485	28	71	81.46
Not ordered.....	42	19	23	45.24
Total	576	504	28	94	78.81
1884.					
Ordered	898	838	50	87.07
Not ordered.....	41	21	20	51.23
Total	939	859	70	88.68
1885.					
Ordered	145	85	10	50	59.81
Not ordered.....	81	21	60	25.98
Total	226	106	10	110	47
1886.					
Ordered	951	275	196	490	27.86
Not ordered.....	109	85	8	58	32.11
Total	1,060	360	204	548	29.25
Whole Period.					
Ordered	2,324	1,296	272	756	55.76
Not ordered.....	444	208	14	227	45.74
Total	2,768	1,504	286	983	54.15

From this it will be seen that 1,499, or 54.15 per cent., of the strikes for the whole period were successful, that 55.76 per cent. of those ordered by labor organizations succeeded, while 45.74 per cent. of those entered into without organization were successful. In the years 1881 and 1886 the percentages of successful strikes were greatest among those not ordered by organizations, while for the other years, in still greater degree the reverse of this was true. The remarkably small percentage of successful strikes in 1886, both of men organized and unorganized, was due in no small degree to the fact that they occurred mostly in Chicago, were inaugurated to secure the eight-hour work-day, and this whole movement collapsed and was brought to failure by the Haymarket tragedy. The final percentage of successful strikes is thus much reduced by the wide-spread failures of 1886.

Referring to Table I, summarizing strikes by years, it will be seen that the total amount of loss in wages to employes for the entire period is \$6,636,208. Of this loss \$2,524,244, or 38.2 per cent., was sustained in 1886. The total assistance received by strikers was \$238,452, being 3.6 per cent of the total wage loss.

The relative loss and assistance for the series of years was for 1881, a wage loss of \$384,444; assistance, \$7,915, or 2 per cent. of the loss. For 1882 the loss was \$695,648, the assistance \$11,040, or 1.5 per cent. In 1883 the loss reached \$1,398,585, the assistance \$101,360, or 7.2 per cent. The loss in 1884 amounted to \$442,366, the assistance to \$8,988, or 2 per cent. In 1885 the loss was \$1,190,921, the assistance \$15,648, or 1.3 per cent. In 1886 the loss reached \$2,525,244, the assistance amounted to \$93,571, or 3.7 per cent. As a matter of fact the assistance received by strikers from other laborers not on strike, whether through organizations or not, is properly an item of "loss" equally with the amounts lost in wages, for these amounts must be taken from the wages of other laborers and lost or absorbed in the strike, or because of it. In its general or abstract sense labor loses this assistance fund in its struggle with capital through the methods of the strike.

The employers' loss resulting from strikes for the entire series of years amounted to \$5,251,829. The census of 1880 gives \$140,652,066 as the amount of capital invested in manufacturing industries in Illinois. The losses sustained by capital through strikes for the six years covered by this report would be 3.7 per cent. of this total investment. The losses of 1886 were \$2,366,555, or 1.7 per cent., of the capital invested. In computations of losses from strikes, the largest item, that of the loss to the community and business in general, can not be reckoned.

In the table under consideration a total of 214,010 is given as the number of employes in the 2,678 establishments in which strikes occurred, and 213,302 as the number employed in the same establishments after the strikes. This statement would be misleading without explanation. In making the totals for a series of six years in any number of factories as to the number of employes, the same individuals would be duplicated a great many times. In statistical tabulations, one man on strike twice must figure as two men on strike, and the establishment that had two strikes during the six years would have its entire force of employes numbered twice, or as often as strikes occurred. The whole force of a great many establishments would thus be counted a great many times in the totals. Especially is this true of the year 1886 when many of the establishments that had strikes at all

had a series of them. Hence the number of employés, either striking or involved in the strikes, must not be considered as so many individuals. This is also true of the number of establishments, where the same shop or factory may have been counted a score of times in as many different strikes.

Bearing this qualification in mind then, we find that 175,837 employés were directly, or actively engaged in the strikes, and that 191,905 were involved directly and indirectly in the troubles, showing 16,068 persons not themselves strikers but whose labor became lost because of strikes in the establishments where they were employed. There were 16,590 new employés after the strikes, which taken together with the fact that before the strikes 214,010, persons were employed while after the strikes only 213,310 were employed, would indicate that 17,290 employés had lost their positions through strikes, and that of these positions 16,590 had been filled by new employés, while there was curtailment of 700 in the total number of employés. Of the new employés 7,466 were brought from other places to where the strikes occurred to take the places of the men on strike. The greatest number of men so brought in from other places during any one year was 3,081 during 1886. By reference to the summary of strikes by industries, Table No. III, it will be seen that the transportation companies have imported the largest number of persons to take the places of striking employés, the number so imported being 1,853. The mining industry follows with 1,681 persons so imported; manufacturers of metals and metallic goods follow with 1,014; manufacturers of agricultural implements come next with 920; the other industries in this particular are relatively unimportant.

In the following summary of strikes by industries, an elaborate classification of all strikes has been made for the entire period, upon a basis of the industries in which they occurred:

TABLE III.—Summary of Strikes in

INDUSTRIES.	ORDERED BY LABOR ORGANIZATION.		ESTABLISHMENTS.

Of all industries it will be seen the building trades sustained the greatest number of strikes, which was 710, involving 9,650 men directly, while affecting more or less the 18,852 persons employed in the trades on strike. The loss in wages in this industry was however, but \$720,538, though the employers' losses seem phenomenally large, being \$1,302,106. The mining industry furnishes the second largest number of strikes, or 291, being 10.5 per cent. of the whole, while the losses in wages to miners is greater than that of any single industry, amounting to \$1,527,428, or 23 per cent., of the total of wage losses. In the strikes in this industry alone 30,159 men were involved. It may be of interest to state that of all the strikes among miners in the United States during the period covered, 14 per cent. were in Illinois. Pennsylvania leads with 880, Ohio had 493, Illinois 291; these three states furnishing 76 per cent. of all the strikes among miners. They also produce 72 per cent. of all the coal mined in the country.

It will also be seen that 208, or 71.48 per cent., of the strikes among miners in this State failed, while only 72 succeeded, the percentage of failures being greater in this than in any other industry except lumber. The cooperage industry furnishes 280 strikes, involving 5,896 men, and a wage loss of \$97,538. Of these 251, or 89.8 per cent., proved successful, while only 9 completely

failed, making a sharp contrast with the failures met with by the miners. Throughout the United States there were 484 strikes in the cooperage industry, 280, or 57.9 per cent., were in Illinois. With more miles of railroad than any other State, the transportation business of the State furnishes 252 strikes, as against 950 in New York. In the 252 strikes in Illinois, 17,872 men were involved, and the loss in wages was \$242,742; 110 of these strikes succeeded, while 142 failed. The manufacture of metals and metallic goods furnishes 176 strikes, involving 21,771 men, and entailing a loss in wages of \$1,414,959, the largest wage loss except that in the mining industry. Of these strikes only 56 succeeded, while 106 were lost. As regards this industry in other States, there were 442 strikes in New York and 308 in Pennsylvania. Illinois follows next and in Maryland and Ohio there were 150 each out of a total of 1,570 for the entire country.

It will be seen that the lumber industries furnish 151 strikes, in which 12,016 men were involved, with a loss of \$270,096 in wages, and a loss to employers of \$200,500. Of these strikes 150 failed and only one succeeded partially, none proving a complete success.

Substantially all of the strikes in the lumber industry occurred in this State and in Michigan, which had 182 out of a total for

the United States of 395. One remarkable thing developed in the comparison is that in this particular industry all of the strikes in Illinois were ordered by labor organizations, and they all failed, while in Michigan one was ordered, 181 were not ordered, 54 succeeded and 127 failed. This fact becomes notable in view of the fact that in totals for Illinois, as shown by a preceding table, a greater percentage of organized strikes succeeded than of unorganized, while in this industry the opposite occurred. The brick-making industry sustained during the six years 113 strikes, in which 4,995 men lost \$233,796 in wages. This was a greater number than was sustained in the same industry in any other state, New York having 105 and the District of Columbia following with 93.

Tobacco industries sustained 131 strikes, involving 1,812 men, and a wage loss of \$25,236. Of these 129 were ordered by labor organizations, and 117 succeeded. The tobacco industry throughout the United States sustained 2,959 strikes, of which 2,103 were in New York, Illinois following with 131 and Florida with 127.

Stone quarrying sustained 100 strikes, in which 5,795 men were involved. Wooden goods had 106 strikes, involving 8,220 men, and a wage loss of \$208,678. Of these 70 failed. Almost half the strikes occurring in this industry were in Illinois. The strikes in the industries classified as food preparations are important, not so much from the number of strikes, which is small, being but 73, as from the number of persons involved. In this particular these strikes become more important than any in the State, involving in 73 strikes 32,895 persons, a loss of wages amounting to \$430,981, and a loss to employers of \$578,244. This class includes the stock yards and packing house strikes in Chicago, which accounts for the very large number of men involved.

To recapitulate, then, Table No. III indicates that the eleven leading industries—namely: the building trades, having 710 strikes, mining 291, cooperage 280, transportation 192, metallic goods 176, lumber 151, tobacco 131, furniture 109, wooden goods 106, brick 113, stone quarrying 100—sustained a total of 2,359 strikes, being 85.19 per cent. of the whole number, and these involved 127,461 men out of a total of 188,592. In these eleven industries oc-

occurred 74.96 per cent. of all the strikes in the United States. Fourteen per cent. of the strikes in these industries was in Illinois, while 12.41 per cent. of all strikes occurred in this State.

ILLINOIS AS COMPARED WITH OTHER STATES.

As a comparison of the strikes in this with those in other states may be of interest, the aggregates for the more important states are here given. Massachusetts, which is here classed among the New England States, had 995 strikes; New York aggregates 9,247; Pennsylvania, 2,442; New England States, 1,358; Ohio, 1,240; Missouri, 1,104; Illinois, 2,768. In this connection Hon. Carroll D. Wright, Commissioner, makes an interesting comparison of five selected states. In commenting upon his tables of strikes and lockouts for the entire United States, he says: "In examining the number of establishments affected by strikes and lockouts by states, it will be found that the number in the states of New York, Pennsylvania, Massachusetts, Ohio and Illinois constituted 74.84 per cent. of all the establishments in the country, so far as strikes are concerned, and 89.48 per cent. of all the establishments affected in the country so far as lockouts are considered."

He then presents the following interesting table where the totals of the five selected states are compared with the total for the entire country by years.

COMPARISON OF UNITED STATES WITH TOTAL OF NEW YORK, PENNSYLVANIA, MASSACHUSETTS, OHIO, AND ILLINOIS.

YEARS.	STRIKES.			LOCKOUTS.		
	Total establishments in the United States.	Establishments in the five selected states.	Per cent.	Total establishments in the United States.	Establishments in the five selected states.	Per cent.
1881.....	2,928	2,154	73.57	9	4	44.44
1882.....	2,105	1,499	71.21	42	28	64.76
1883.....	2,759	2,046	74.16	117	105	89.74
1884.....	2,867	1,896	80.10	354	306	86.44
1885.....	2,284	1,686	69.44	153	140	78.50
1886.....	9,861	7,511	76.17	1,509	1,408	93.28
All years	22,804	16,692	74.84	2,214	1,981	89.48

These five states contain 49 per cent. of all the manufacturing establishments, and employ 58 per cent. of the capital invested in mechanical industries of the United States, taking the census of 1880 as the basis of computation.

While comparisons instituted between states, or a group of states and the whole number have points of interest, yet it must be borne in mind that industries know no state lines, and strikes in any given branch are no more bounded by state lines than by county lines. Industrial lines are the only boundaries in this case, as a strike, in a given industry, or trade, follows up the line of that industry regardless of geographical boundaries. An instance of this, perhaps the most striking one, is to be found in the building trades. In these trades New York had 2,591 strikes, Illinois 710, Missouri 697, Massachusetts 492, or 49.4 per cent. of all the strikes in the State, Pennsylvania 380. The District of Columbia with a total of but 383, had 242 strikes in these trades, while Louisiana with but 190 strikes in all, had 132 in the building trades. States of little importance in the totals for all strikes, take high rank in particular industries.

In the boot and shoe industry Massachusetts had 171 strikes, New York 39, Ohio 40, and Maine with a total of 41 strikes had 14 in this industry. Illinois had 11. In the manufacture of brick Illinois leads with 113 strikes, New York had 105, the District of Columbia 93, Ohio 50. In cooperage Illinois gives 280 strikes, while no other state had a considerable number except Ohio with 56.

In the manufacture of furniture New York has 200 strikes, Illinois 109, Missouri 68, out of a total for that industry in the United States of 491. In machines and machinery Illinois leads with 44 strikes, New York 37, New Jersey 22, Ohio 18, Pennsylvania 17, and Colorado 10, out of a total of 180 for the entire country. In the designation, metals and metallic goods, are classified such industries as barbed-wire, wires of all kinds, brass and iron foundries, etc. In this industry there occurred 176 strikes in Illinois, 442 in New York, 308 in Pennsylvania, 150 in Ohio; in the New England States 121, Maryland 150, and Missouri 44 out of a total of 1,570 in this line of goods.

In mining, out of a total for the United States of 2,060 strikes Illinois had 291, or 14.12 per cent.; Pennsylvania 880, or 42.71 per cent.; Ohio 493, or 23.93 per cent.; Iowa 130, or 6.31 per cent.; while Colorado follows with 46, Indiana 43, Missouri 40, and West Virginia 33.

In transportation, out of a total of 1,478 strikes, New York had 950, Illinois 252, while Missouri follows with 47, the number in other states being comparatively small.

CAUSES OF STRIKES.

Below is given a summary of causes of strikes by years, in which a classification of the entire number of strikes has been made, according to the cause or object for which they were inaugurated:

TABLE IV.—*Summary of Causes, etc., of Strikes in Illinois, by Years.*

Years and cause or object.	Estab- lish- ments.	Suc- ceeded.	Suc- ceeded partly.	Failed.

In sympathy with strike elsewhere	3	1		2

It will be seen that 237, or 97 per cent. of the whole number of strikes for 1881, were for increase of wages; no other cause contributing a considerable number. Of these 140, or 59 per cent., succeeded, 33, or 14 per cent., partly succeeded, while 64, or 27 per cent., failed. In 1882 there were 152, or 73.8 per cent., for increase in wages. Of these 104, or 68.4 per cent., succeeded, 8 partly succeeded and 40 failed. There were during this year 22 strikes against reduction of wages, or 10.7 per cent. of the whole number. Of these 19 failed, only 3 proving successful.

Of the 576 strikes in 1883, 381 were for increase of wages, being 66.1 per cent. of the whole, while 132 cases presented a complication of union rules with a demand for increased pay. Classing both as demand for increase, they comprise nearly 90 per cent. of the strikes of that year. Of those for increased pay alone 79 succeeded, while all of those presenting a complicated cause were successful. There were 32 strikes against reduction of pay, 11 of which succeeded and 21 failed.

In 1884 there were 429 strikes, 91 or 21.2 per cent were for increase in wages simply, 304, or 70.7 per cent., were for increased pay with reduction of the hours of labor, these two constituting 91.9 per cent. of the whole, being virtually for increase in pay. Three hundred and forty-five, or 87.3 per cent., of these succeeded,

and 50 failed. There were 22 against reduction of pay, of these 10 succeeded and 12 failed. Of the 226 strikes in 1885, 148, or 65.5 per cent. were for increase, and 38 against reduction of pay.

In 1886 there were 1,060 strikes, of these 569 were for reduction in the hours of work per day, while 361 might properly be classed as for increase of pay, though in some of these cases complications arose as to hours of labor. There were 45 strikes against increase of hours, and 27 against reduction of wages.

Of the total number then, in six years, 1805 or 65.2 per cent were to secure increased remuneration for labor performed. Of these 1,215 or 67.3 per cent. succeeded. There were 148 against reductions in wages, 55, or 37.2 per cent., of which proved successful to the strikers. There were 580 or 20.9 per cent. of the whole number which were for reduction of hours of these but 167 or 29 per cent. succeeded. These three causes cover 91.5 per cent. of all the strikes. Of the 102 strikes inaugurated to enforce the adoption of the rules of trade-unions, to prevent the employment of non-union men, or prevent the discharge of union men, to force the discharge of obnoxious foremen or other employes, or simply to aid other strikers in what is termed "sympathetic strikes," only 18 succeeded. The percentage of successful strikes being smaller among those strikes inaugurated to enforce a recognition of unions, and matters connected with them than in any other class.

As indicative of the proportion of offensive and defensive strikes, it will be seen from the table that of the 2,768 strikes 258 were "against" some action or proposed action of employers, while 2,510 were "for" some object proposed by the workmen.

On the matter of causes of strikes the U. S. Commissioner of Labor, speaking of the entire United States, says:

"Upon an examination of the causes for which strikes were undertaken, it is found that seventeen causes constitute 90.28 per cent. of all the establishments, leaving 297 causes operative in only 9.72 per cent. of establishments. Even four leading causes are seen to cover 77.16 per cent. of establishments. These facts are brought out clearly in the following exhibit of causes:

LEADING CAUSES OF STRIKES—NUMBER AND PER CENT. FOR THE UNITED STATES.

Cause or Object.	Establishments.	Per cent.
For increase of wages.....	9,439	42.32
For reduction of hours.....	4,344	19.48
Against reduction of wages.....	1,731	7.77
For increase of wages and reduction of hours.....	1,692	7.59
For reduction of hours and against being compelled to board with employer.....	800	3.53
For change of hour of beginning work.....	380	1.61
For increase of wages and against the contract system.....	288	1.07
For increase of wages and against employment of non-union men.....	215	.96
In sympathy with strike elsewhere.....	173	.77
For 9 hours' work with 10 hours' pay.....	172	.77
Against employment of non-union men, foremen, etc.....	162	.73
For increase of wages and recognition of union.....	145	.65
For adoption of union, etc., scale of prices.....	142	.64
Against increase of hours.....	138	.62
For increase of wages and enforcement of union indenture rules.....	132	.59
For reduction of hours and wages.....	126	.56
For reinstatement of discharged employes, foremen, etc.....	124	.56
All other causes (297).....	20,186	91.28
Total for the United States.....	22,304	100.00

Strikes for an increase of wages occurred in 9,439 establishments; of these the strikes in 6,229, or 65.99 per cent., were successful, while in 796, or 8.43 per cent., the strikes were partly successful, and in 2,414 establishments, or 25.58 per cent., the strikes for this cause failed.

In 4,344 establishments strikes were resorted to to secure a reduction of the hours of labor; in 1,055, or 24.29 per cent., success was the result; in 966, or 22.24 per cent., the strikes were partly successful; and in 2,323, or 53.47 per cent., the strikers were defeated."

RECOVERY FROM STRIKES.

In the following tables exhibit is made of the time required for the strikers to regain through increased wages, the losses sustained in wages during the strike. In this table only those strikes are given which were inaugurated to secure increase in wages and which were successful in securing that increase to all persons involved. Strikes for increase in pay in which all the employes involved did not, as a result of the strike, receive the increase, have been eliminated from this table because of the impossibility of finding a method of commutation that would be just and at the same time susceptible of tabulation. The strike number is given in each case as a reference to the general table, where each case can be identified by these strike or office numbers.

TABLE V.—*Days Required for Employes to Recover Wage Losses in Wholly Successful Strikes for Increase of Wages.*

Strike number.	Average wages lost per employé during strike.	Average daily wage gain per employé by strike.	Average days required to meet loss.	Strike number.	Average wages lost per employé during strike.	Average daily wage gain per employé by strike.	Average days required to meet loss.

707.....	4 00	25	16				

Taking the whole number of strikes for the entire period of six years, it is found that 17,922 men were involved in successful strikes for increase in wages. The loss in wages sustained by these 17,922 persons amounted to \$286,472, an average loss of \$16

each. By the successful issue of these strikes, however, the wages of these men was 26 cents per day higher than before. It would therefore require an average of 61 days for the strikers to meet the actual loss in wages, by the increase resulting from the strike. That is, it would take 61 days at 26 cents, the average gain per day, to make up the \$16 average loss. Taking the same class of strikes in the entire United States, in which 168,761 persons were involved and the total loss in wages was \$3,445,478, we find an average loss of \$20.42, an average gain of 27 cents per day, and 76 days as the time required for the gain to meet the loss.

There follows a table similar to the preceding one, but including only those strikes inaugurated to secure an increase in wages, in which all persons employed in the several establishments joined in the strike, but in which the strikers were only partly successful—that is, where only a portion of the demanded increase was secured.

Days Required for Employes to Recover Wage Losses in Partly Successful Strikes for Increase of Wages.

Strike number.	Average wages lost per employé during strike.	Average daily wage gain per employé by strike.	Average days required to meet loss.	Strike number.	Average wages lost per employé during strike.	Average daily wage gain per employé by strike.	Average days required to meet loss.
470	\$9 00	\$0 15	60	551	\$23 80	\$0 05	676

540	28 80	05	576	999	22 50	15	150
546	38 52	05	770				
547	33 80	05	676	Averages.	\$38 00	\$0 19	200

In these partially successful strikes for increased pay 3,303 men were involved, sustaining an aggregate wage loss of \$125,674, or an average of \$38 per striker. The average gain was 19 cents per day; the average time required for gain to meet loss would hence be 200 days. In the wider range of the entire United States in this class of strikes 34,047 men were involved, the total wage loss being \$1,475,673, or an average loss per employé of \$43.34. The average gain was 12 cents per employé per day, and the average number of days required for gain to meet the loss was 361.

The following table summarizes the causes of strikes by the industries in which they occurred, for the entire period of six years.

Against reduction of wages.....	1	1
For increase of wages.....	4	1	3
For increase of wages and reduction of hours.....	12	6	6
For reduction of hours.....	28	18	8	7

It will be seen from the foregoing summary that the building trades, which sustained 25.5 per cent. of the whole number of strikes, or 710, had 614 strikes for increase in pay, i. e., 84.48 per cent. of the strikes in these trades were for that cause, with some complications in a number of cases. With 25.5 per cent. of the total strikes, these trades had 34 per cent. of the strikes for increased pay, and 14.3 per cent. of these for reduction of hours. Of the total of strikes for reduction of hours, 70 per cent. occurred in the eight industries, brick, building trades, clothing, food preparations, furniture, stone, transportation and wooden goods, and of the 1,805 strikes for increased pay, 1,493 or 82.71 per cent. occurred in six industries, namely, the building trades, cooperage, lumber, mining, tobacco and transportation.

LOCKOUTS IN ILLINOIS.

The effects of a strike and a lockout are the same; but they differ as to the side inaugurating them. When employ es refuse to work under conditions imposed by employers, or unless some condition advanced by themselves is accepted by the employer, then it is a strike; when the employer refuses to allow the workmen to work unless upon conditions imposed by him, or in anticipation of demands to be made by his workmen, he closes his factory, it is a lockout. One is a strike of workmen against an employer; the other a strike of employer against workmen. In the general table herewith presented, the same arrangement is continued as that used for strikes, and the same set of facts is brought out. The following table, is a summary of the lockouts presented in the general table, by years.

TABLE VII.—*Summary of Lockouts in Illinois by Years.*

YEARS.	ORDERED BY LABOR ORGANIZATION.		ESTABLISHMENTS.				DURATION (DAYS).	
	Yes.	No.	Number.	Number closed.	Aggregate days closed.	Average days closed.	Aggregate.	Average.

Total.....	21,747	21,747	21,797	21,797

YEARS.	EMPLOYEES LOCKED OUT.			NEW EMPLOYEES AFTER LOCKOUT.			BROUGHT FROM OTHER PLACES.
	Male.	Female.	Total.	Male.	Female.	Total.	
1 1881.....	125	125	100	100	1
2 1883.....	467	467	133	133	2
3 1884.....	1,847	1,847	3
4 1885.....	730	730	100	100	75
5 1886.....	18,228	18,228	500	500	5
Total.....	21,397	21,397	833	833	875

An examination of the summary table will show but one lockout in 1881, none at all in 1882, 33 in 1883, 40 in 1884, 10 in 1885, 43 in 1886, making a total of 127 for the period covered by the investigation. Of these 53, or 41.73 per cent., were ordered by organizations of managers, while 74 or 58.27 per cent. were not so

ordered. Of the whole number, 69, or 54.33 per cent., succeeded, 30, or 23.63 per cent., partly succeeded, while 28, or 22.04 per cent., failed.

Of the 53 lockouts ordered by combinations, or organizations of employers, 28, or 53.83 per cent., succeeded, while 25, or 47.17 per cent., failed. Of the 74 not ordered, 41, or 55.41, per cent., succeeded, 30, or 40.54 per cent., partly succeeded, while but 3, or 4.05 per cent., failed.

Of the 127 establishments 62 were closed by the lockout, the aggregate number of days closed being 1,137, an average of 18.3, while the average duration of the lockouts was 27.7 days. The number of employes at the 127 establishments was 21,747, the number locked out 21,397, and the loss in wages \$533,497, the loss to employers being \$347,065. The number of lockouts in 1884 was 40, in 1886 but 43, and yet the number of men locked out in 1886 was 18,228 as against 1,847 in 1884, showing that the lockout as a weapon of industrial warfare was used by very much larger and more important establishments in the last year of the investigation than in any of the former years.

There were 833 new men employed after the lockouts, and as there was an increase of but 50 from 21,747 to 21,797 in the number of men employed, it follows that 783 of the old employes were permanently locked out and discharged, or at least did not return to work. Of the 833 new employes 575 were brought from other places than that in which the lockout occurred. Of these importations 500 were in 1886. But 5.73 per cent. of the lockouts in the United States occurred in Illinois. In the following table the lockouts have been summarized on a basis of the industries in which they occurred, for the whole period, without reference to years.

TABLE VIII.—*Summary of Lockouts in Illinois by Industries.*

INDUSTRIES.	ORDERED BY OR- GANIZATION.		ESTABLISHMENTS.			
	Yes.	No.	Number.	Number closed.	Aggre- gate days closed.	Average days closed.

9	180	180
	21,397	21,397	838	838	575

It will be seen that in nine industries occurred all the lockouts that took place in the State. The brick industry had the greatest number, 45, or 33.43 per cent. of the whole number. Tobacco follows with 33, and clothing with 30, these three industries having 85 per cent. of the lockouts of the State. All those in the tobacco industry proved successful, 27 out of the 45 in the brick industry succeeded, while the 30 inaugurated by clothing manufactures succeeded in part. The most important lockouts so far as number of employes affected is concerned were those in the food preparing industries, as 16,000 out of a total of 21,297 were locked out in this industry, and of the 575 men brought from other points 500 were in this industry. By reference to the general table of lockouts it will be seen that in the matter of causes 51 were inaugurated to enforce a reduction of wages, 33 against union men; 30 were against demand for increase of wages or reduction of hours, 7 to prevent reduction of hours, and 5 to enforce increase of hours, and one against demand for increase in wages. Of the 51 lockouts to enforce reduction of wages 28 succeeded; of the 33 against union men all were successful; and of the 7 to prevent reduction of hours 6 were successful.

There were in the United States for the period of six years covered by the investigation 2,214 lockouts, 1,528 of which occurred in New York, 147 in Massachusetts, 130 in Pennsylvania, 127 in Illinois, Ohio following with 49, and New Jersey with 43.

As in strikes some were for a reduction of hours, and some against a reduction of working time, so with lockouts,—some were

inaugurated to accomplish the very purposes others were calculated to resist. There were in the entire country 6 lockouts against members of the Knights of Labor, and 10 lockouts to compel employes to join the Knights of Labor. One against members of the Cigarmakers' International Union, and 15 against a demand to discharge members of that organization. There were 19 lockouts to enforce the appointment of a joint-board of arbitration, while in Illinois there were 3 strikes attempting to force the same consideration.

In these industrial disturbances between 1881 and 1886, there was a total loss to the employers and employes of \$2,768,600, or if we add the assistance funds distributed among strikers and those locked out, which is clearly an item of loss, we have a total of \$13,012,426, or an average of \$2,168,737 per year, and it may be fairly assumed that this is approximately the average annual loss to the State from these disturbances; to leave entirely out of the calculation the infinitely greater losses to business and the public in general, which are not computable.

In the following pages will be found the tables in full and in detail, from which the foregoing deductions have been drawn.

CHAPTER II.

GENERAL TABLES OF STRIKES AND LOCKOUTS.

Strikes by Years and Industries.

YEARS AND INDUSTRIES.	LOCALITY.	CAUSE OR OBJECT.
1881.		
AGRICULTURAL IMPLEMENTS.		
469 Moulders, grain-drill works...	Peoria	For discharge of an employé
BOOTS AND SHOES.		
470 Slippermakers	Chicago	For increase of wages.
471 Employés	Chicago	Against reduction of wages
BRICK.		
472 Employés	Chicago	For increase of wages.
473 Employés	Decatur	For increase of wages.
474 Employés	Decatur	For increase of wages.
COOPERAGE.		
475 Employés	Chicago	For increase of wages.
476 Employés	Chicago	For increase of wages.
477 Coopers, flour barrels	Calro	For increase of wages.
478 Employés	Chicago	For increase of wages.
479 Employés	Chicago	For increase of wages.
FOOD PREPARATIONS.		
480 Employés, corn starch factory.	Peoria	For increase of wages.
481 Bakers	Chicago	For reduction of hours
FURNITURE.		
482 Upholsterers	Chicago	Against employment of additional appren- tices
483 Machine hands	Decatur	For increase of wages.
GAS AND COKE.		
484 Employés, gas house....	Chicago	For reinstatement of 4 discharged employés.
MACHINES AND MACHINERY.		
485 Boilermakers and helpers....	Chicago	For increase of wages.
486 Boilermakers and helpers....	Chicago	For increase of wages.
487 Boilermakers and helpers....	Chicago	For increase of wages.
488 Boilermakers and helpers....	Chicago	For increase of wages.
489 Boilermakers and helpers....	Chicago	For increase of wages.
490 Boilermakers and helpers....	Chicago	For increase of wages.
491 Boilermakers and helpers....	Chicago	For increase of wages.
492 Laborers, R. R. machine shops.	Bloomington	For increase of wages and reduction of hours
METALS AND METALLIC GOODS.		
493 Moulders, stove foundry	Chicago	For increase of wages.
494 Employés, iron works	Springfield	For adoption of association scale of prices.
495 Moulders, stove foundry	Chicago	For discharge of foreman
496 Horseshoers	Chicago	For discharge of employé
497 Employés, iron foundry	Chicago	For increase and readjustment of wages
498 Moulders, iron foundry	Chicago	For increase of wages.
499 Moulders, iron foundry	Chicago	For increase of wages.
500 Employés, stove foundry	Chicago	For increase of wages.
501 Employés, iron foundry	Chicago	For increase of wages.
502 Employés, iron foundry	Chicago	For increase of wages.
503 Employés, iron foundry	Chicago	For increase of wages.
504 Employés, blast furnace	South Chicago	For increase of wages or reduction of hours.
505 Moulders, iron foundry	Chicago	For increase of wages.
506 Employés, steel-rail works....	Springfield	For increase of wages.

a \$3,420 in money assistance was paid to all persons involved in this strike in Chicago, but this sum cannot be properly distributed among the several establishments.

b Some of the old employees returned at the end of two months, but it was twelve months before the strike was declared off.

a \$3,420 in money assistance was paid to all persons involved in this strike in Chicago, but this sum cannot be properly distributed among the several establishments.

b Some of the old employees returned at the end of two months, but it was twelve months before the strike was declared off.

a This is a part of the general strike which involved the iron mills of seven states. The new scale of prices fixed by the Amalgamated Association of Iron and Steel Workers increased the pay of puddlers only, they being 10 per cent. of the employees. The increase was only 1 per cent. on former scale.

PART III.

STATISTICS OF COAL MINING IN ILLINIOS.

THE REPORTS OF THE STATE INSPECTORS OF MINES.

COAL IN ILLINOIS.

This is the seventh annual compendium of the statistics of coal production in Illinois. It is based upon the reports of the several state inspectors of mines made under instructions from this bureau, and contains not only the reports themselves, with uniform and parallel statistics from each district, but also such summaries and deductions from the same concerning the whole State as the details of districts justify.

In brief the inspectors' reports afford specific information as to the physical characteristics of each mine, the methods of development and the mechanical equipment of each; the statistics of employes and of their wages, and of production and prices; the record of casualties and of measures to prevent them; the opening of new mineral and the closing of exhausted mines; and in general, the progress made in enforcing the legal regulations governing this industry. As a complement to these details an abstract is presented summarizing the conclusions and statistics for the State at large, affording concise information for the year, and opportunities for comparison with the results of former years.

It has also been the custom of the bureau to present with each year's routine statistics the details of some of the special features of coal mining in Illinois; and in pursuance of this practice former reports have contained special reference to the character of the coal and coal measures of the State; to the arrangement and ventilation of mines; to the number, character and influence of so-called truck stores; to the statistics of explosives and of the quantity required in the various seams and systems, and to the dimensions of the screens used by operators in this State in preparing their coal for market.

For the present report a special inquiry has been instituted concerning the use of mining machines in the various coal fields of the State, the results of which are hereafter presented in their proper connection.

THE RECORD FOR 1888.

The summaries showing the actual volume of coal business done in this State during the year ending July 1, 1888, and the number of men, and of establishments, and of days required to do it; the revenue to miners and proprietors derived from it; and the cost of it to the community in human lives, impaired and lost, are as follows:

Number of counties reported.....	50
Number of mines and openings of all kinds.....	833
Number of tons of lump coal mined.....	11,855,188
Aggregate value of the same at the mines.....	\$13,309,030
Average value per ton at the mines.....	\$1.123
Number of employés of all kinds.....	29,410
Number of miners employed.....	23,648
Number of other employés (including boys).....	5,762
Number of boys employed under ground.....	868
Average number of days of active operations.....	220.6
Number of kegs of powder used.....	190,710
Average price paid per ton for hand mining.....	\$0.716
Number of men killed.....	55
Number of wives made widows.....	28
Number of children made fatherless.....	89
Number of men injured so as to lose time.....	179
Number of tons mined for each life lost.....	215,549
Number of employés for each life lost.....	535
Number of new mines.....	99
Number of mines abandoned.....	94
Number of mining machines in use.....	272

These figures show an output greater by a million and a half tons than has ever before been attained in this State; a somewhat better average price for the same, and an increase in working force corresponding with the greater amount of work done. This indicates, however, not so much an increase in the number or

capacity of the mines of the State, as an enlargement of opportunities to market the product; in other words, those favorable conditions which constitute a good season, and afford a fair chance for the mines already open. The capacity of existing mines in this State is in fact largely in excess of any demand which has yet been made upon them, and there is every present prospect that this disparity will be maintained, as the development of new mines quite keeps pace with, if it does not exceed, any increase which may be legitimately anticipated in the demand.

There has been a marked tendency during the year to enlarge the operations of existing companies and to organize new ones for the further development of such seams as are of established location and character. Something of this is observable in the northern fields adjacent to the recently acquired territory of the Spring Valley company. In this field the Chicago, Wilmington and Vermilion company has secured a foothold for operations auxiliary to their extensive enterprises at Streator and Braidwood; and a new company from a neighboring state, the Whitebreast Fuel Company, has also acquired property here and has encountered and overcome great obstacles in sinking to the superior lower seam of this region.

Still greater activity in original enterprises has characterized some points in the central and southern portions of the State. Shafts have been sunk in McLean county, at Colfax, Saybrook, Maroa and Lexington, and with notable success at Colfax, where a coal of good quality is found. The thickness and excellence of the seam at Pana, in Christian county, has especially stimulated operations at that point and in that vicinity. Two new companies have been organized and are advancing their works at Pana, and others are sinking or prospecting at the neighboring towns of Taylorville, Oconee, Ramsay, Coffeen, Moawequa and Assumption. The coal in this field is probably from 500 to 800 feet below the surface, and is seven or eight feet in thickness. Operations are predicated upon its being substantially uniform and persistent throughout that region, though it has not been found in place at Assumption.

In Marion county, some fifty miles or more south of this, there have been several very deep shafts sunk to coal recently, viz.: at

Odin, Salem and Kinnmundy, and the projectors of these enterprises are now ready to compete in the market with the older collieries at Centralia and Sandoval. Still farther south in Perry and Jackson counties, notably in the vicinity of Elkville, desirable tracts of coal land have during the year been taken up for the purpose of immediate development, and indications point to a material increase in the output of coal from that field.

There has been a revival of prospecting and of development at other points, as well as some exhaustion and abandonment of mines, the statistics of which are found in the inspectors' tables; but in general the tendency is towards an increased production. This may be ascribed to several causes, conspicuous among which, no doubt, is the degree of prosperity which has attended the business during the year, and the impression which that begets that a coal mine is an unfailing source of wealth to its owners; beyond that is the broader view that this State, by its location and established wealth of mineral, must be the natural source of supply for an extended territory; that the coal of western States will prove a diminishing factor in the markets of the northwest, and that natural gas and crude oil will prove less formidable competitors as commercial fuel than had been supposed.

THE NUMBER AND CHARACTER OF MINES.

In the foregoing summary the whole number of mines and openings of every kind is given as 833; of these, however, 11 are found to be so-called "strippings," where the coal, lying near the surface, is uncovered and quarried, and they are consequently dropped from the classification of mines proper, leaving a total of 822. This shows an increase of 21 over the number reported for 1887. Of these 21 mines, 8 are found to be mines of the first class, or those which produced more than 50,000 tons, and 13 to be of the second class, or those which produced from 10,000 to 50,000 tons. In mines of the third class there are 7 mines less, and in those of the fourth class 7 mines more than in the year preceding, which equalizes the whole number in these two classes.

Following the classification in former reports, and including the tabulations made for former years, the following comparative statement is made of the relative number and relative product of the coal mines of the State for a series of six years:

YEARS.	No. of mines producing less than 1,000 tons.	No. of mines producing from 1,000 to 10,000 tons.	No. of mines producing from 10,000 to 50,000 tons.	No. of mines producing over 50,000 tons.	Total number of mines.
1883	209	233	135	62	639
1884	262	273	146	60	741
1885	286	290	139	63	778
1886	316	280	136	57	787
1887	320	278	139	64	801
1888	327	271	152	72	822

This shows a continual increase in the number of mines during a period of six years, and at present 183 more mines than in 1883. Ten of these are mines of the first class, 17 of the second class, 38 of the third class and 118 of the fourth class. This classification is not based on the capacity but upon the actual product, so that it is not exact as to what might be produced by the several establishments under favorable conditions. The same rule, however, has been applied to the separation of mines in each year so that the relative showing is true.

That the mere enumeration of the places where mineral is found and taken for use, signifies very little unless some indication is given as to their relative capacity, is made apparent upon a comparison of the relative tonnage of the several groups of so-called mines in this table. Here are 598 mines of the two smaller classes whose total output is only about 8 per cent. of the whole; while the 72 mines of the first class produce over 60 per cent., and the 224 mines of the two larger classes produce 92 per cent. of all the coal mined in the State. Below is a statement of the relative product of the several classes of mines for the last two years:

YEARS.	MINES PRODUCING MORE THAN 50,000 TONS.		MINES PRODUCING FROM 10,000 TO 50,000 TONS.		MINES PRODUCING LESS THAN 10,000 TONS.		TOTAL NUMBER OF MINES.	
	No.	Tons.	No.	Tons.	No.	Tons.	Total No.	Total Tons.
1887	64	5,949,894	139	3,270,681	598	1,068,315	801	10,278,890
1888	72	7,188,507	152	3,666,324	598	1,000,357	822	11,855,188

It is observed here that, the gain both in mines and in tonnage is in the more important classes, while the output of the mines grouped in the lower classes is, in the aggregate, somewhat less than for the year preceding. But it is also true that a portion of the mines which produced less than 10,000 tons in that year would in a good season so increase their product as to gain position in a higher class. This doubtless explains the fact that there are fewer mines in the third class and more in the second than in the former year. The five mines from which were delivered the greatest number of tons of coal during the year are the following:

FIVE MINES SHOWING LARGEST OUTPUT FOR 1888.	TOWN.	COUNTY.	DIST.	OUTPUT.
			No.	Tons.
Chicago, Milwaukee & St. Paul Coal Co. No. 2.....	Braceville.....	Grundy.....	1	213,485
Chicago, Wilmington & Vermilion "J"	Braidwood.....	Will.....	1	210,190
Chicago, Wilmington & Vermilion No. 3.....	Streator.....	Livingston..	1	209,820
Spring Valley Coal Co. No. 1.....	Spring Valley.	Bureau.....	2	203,700
Spring Valley Coal Co. No. 2.....	Spring Valley.	Bureau.....	2	203,500
Total tons				1,120,714

These are the only mines from which were hoisted 200,000 tons or more during the year, and the first of these has been distinguished for a number of years as the greatest producer in the State.

THE OUTPUT FOR THE YEAR.

The whole number of tons of lump coal delivered from the mines of Illinois during the year ended July 1, 1888, was 11,855,188. This is 1,576,298 tons more than the output for the year preceding, and more than that of any other year in the history of the State. The following are the summaries for the total production of coal in Illinois, in tons of 2,000 pounds of lump coal, for a series of eight years:

1880.....	6,115,377 tons	1885.....	9,791,874 tons
1882.....	9,115,658 "	1886.....	9,346,435 "
1883.....	10,080,991 "	1887.....	10,378,890 "
1884.....	10,101,005 "	1888.....	11,855,188 "

These totals have been compiled from exact data procured by this bureau for each of the foregoing years except 1880, for which year the total given was compiled by the United States census

officials. This presentation is noteworthy not only as indicating the unusual activity in mining enterprises in 1888, but equally as showing the depression in this business during the years 1885 and 1886.

The foregoing totals represent, as indicated, the total tonnage in the commercial grade known as lump coal, but there is at every mine a product known as nut coal, which is obtained by dumping the coal as it comes from the mine over a screen in order to sift out the slack and small coal made in the mine, and prepare the lump coal better for market; underneath the first is a second screen which separates the slack from the nut coal, which is thus also prepared for market, and makes an excellent fuel. The proportion of nut coal thus obtained depends of course upon the dimensions of the screen, and varies widely in different parts of the country and of this State. Recent official statistics of coal production in Ohio give as the amount of screenings, nut, pea coal and slack, "sold and shipped" in that State in 1887 a total tonnage equal to 30 per cent. of all the lump coal produced. If to this be added the portion of slack not sold and shipped, the total of screenings taken from the miners' output in Ohio would seem to be 35 or 40 per cent. of all the coal mined, of which 30 per cent. is sold and shipped. The screens of this State, however, do not permit any such portion of the total product to pass through them, and rarely admit of making pea coal at all. In fact the statistics of screen dimensions, as compiled and published in a recent report of this bureau, establish the fact that the proportion of nut coal made in this State is equal to 13 per cent. of the lump coal product. It is proper, therefore, that this increment should receive recognition, especially in making comparisons with other States, or in computing the total contribution of this State to the fuel supply of the country. Omitting the consideration of slack altogether, as an uncertain and inconsiderable element in the commercial product, and adding to the total tons of lump, as given, 13 per cent. for other forms of merchantable screenings, and the output of this State is increased from 11,855,188 tons to 13,396,362 tons, which is doubtless very nearly the true tonnage consumed. Formerly the proportion of screenings was larger in this State than now, and in future it is believed it will be less, as the tendency is towards a reduction in the size of screens. At

present 65 per cent. of the coal mined in this State is screened over bars seven-eighths of an inch apart, which is regarded as a standard and legitimate screen.

The gain in the output in 1888 is found to have been made in the following amounts in the several districts: In the first district 190,965 tons; in the second district 224,160 tons; in the third district 410,726 tons; in the fourth district 286,247 tons, and in the fifth district 464,198 tons. The largest gain in any one county was in Bureau county, which produced 205,519 tons more than in the year preceding; there was a gain, however, of 166,430 tons in St. Clair county; 162,622 tons in Macon county, and large gains in Vermilion, Fulton, Livingston and other counties; while in LaSalle county the product was 34,800 tons less than in 1887. St. Clair county ranks as the greatest producer of coal in 1888. The ten foremost counties with their respective tonnages are as follows:

1. St. Clair.....	1,184,579 tons	6. Bureau.....	635,097 tons
2. LaSalle.....	1,090,435 "	7. Peoria.....	533,817 "

a Edgar and Jasper counties, each having one mine not operated, not included.

b The output of one mine which was abandoned in February, 1888.

Although, as has been shown, an exact enumeration gives 833 as the whole number of openings from which coal is taken, yet comparatively few of these can take rank as establishments of the first magnitude. An examination on this line shows that somewhat more than half the total product is mined by 21 of the great companies, from 85 mines, situated in 45 towns and villages, in 21 counties, and is the result of an average of 227.2 days' operations. The details of this general statement are presented in the following table showing the title, field of operations, and output of the more conspicuous producers:

g One mine at Astoria, and one at Dumfermline.

VALUE OF COAL AT THE MINES.

The average value, at the mines, of the coal produced during the past year, as derived from the reports of operators, and computed for the total output of the State, is found to have been \$1.123 per ton. For the year preceding the average value was \$1.085 per ton, and for the year before that, 1886, it was \$1.11 per ton,—the average for this year being somewhat better than for

two years past. This is the first year since 1880 in which there has not been a decline from the average value of the former year. In fact, the tendency has been uniformly, and not always gradually, downward for the last 15 years, though the statistics of the subject do not go beyond 1880. From that date to 1887, the home value of coal, averaged for the State at large, declined from \$1.51 per ton to \$1.085 per ton; the tonnage meanwhile increased from six to ten millions. During the past year, however, with an output greatly in excess of that of any other year, there has also been some tendency to firmer prices, or at least a check to the continuous and long sustained decline. This reaction has characterized all the districts except the second in which the average value is reported $2\frac{1}{2}$ cents a ton less than in 1887. In the first district however the gain in average value is 4.07 per cent.; in the third district, 3.96 per cent.; in the fourth, 6.76 per cent.; and in the fifth, 4.19 per cent., making the average gain for the State 3.46 per cent. Below is given the result of similar computations for districts and the State, for a series of seven years.

Average Value of Coal per ton (2,000 pounds) at the Mines.

Districts.	1882.	1883.	1884.	1885.	1886.	1887.	1888.
First.....	\$1 75	\$1 59	\$1 49	\$1 41	\$1 32	\$1 316	\$1 3696
Second.....	1 87	1 97	1 79	1 71	1 57	1 497	1 4735
Third.....	1 43	1 45	1 31	1 25	1 16	1 085	1 1334
Fourth.....	1 23	1 22	1 09	.985	.969	.897	.9470
Fifth.....	1 31	1 26	.961	.894	.862	.823	.8575
The State.....	\$1 51	\$1 48	\$1 26	\$1 17	\$1 10	\$1 085	\$1 1226

These averages have been computed similarly and from parallel data for each year, and although they cannot be exact as to the prices actually received, are in general true, as to prevailing values and the tendency of the market.

PRICES PAID TO OPERATIVES FOR MINING.

Heretofore all statistics on the subject of wages paid to miners in this industry have been confined to the prices paid per ton to hand-miners, as distinguished from those who work with and about machines. During the past year some facts have been

taken concerning the labor cost of coal produced by machines, and the prices for mining are consequently considered now for the first time under both systems.

HAND-MINING.

The average rate per ton paid for mining coal with the common pick, including blasting, timbering and loading, for the State at large, for 1888, as deduced from the specific amounts produced and prices paid in each locality, is 71.7 cents, while the corresponding rate for the year preceding was 72.7 cents, a decline of one cent per ton. While this is true of the State, however, there are fractional gains in the prices of mining in the third, fourth and fifth districts, which are somewhat more than offset by a slight decline in the first and second districts; all these variations, however, are so insignificant as to practically leave the prices unchanged from those of 1887. The following table shows the averages of prices paid for hand-mining, in each district, and the State, for a period of six years:

Average prices paid per ton for hand-mining 1883 to 1888.

Districts.	1883.	1884.	1885.	1886.	1887.	1888.
First.....	\$0.917	\$0.906	\$0.867	\$0.859	\$0.891	\$0.8835
Second.....	.968	1 00	.941	.927	.927	.9181
Third.....	.875	.873	.814	.729	.668	.7055
Fourth.....	.71	.694	.62	.573	.576	.6136
Fifth.....	.619	.60	.511	.501	.587	.5536
The State.....	.802	.783	.725	.676	.727	.7171

This shows the lowest price to have been reached in 1886, the year in which, also, the smallest aggregate of coal was produced.

Following is a combination of the results shown in the foregoing tables of values and prices, in which the ratio is brought out between the principal factor in the cost of production and the value of the product.

*Average Value of Coal and Average Prices for Mining.
1883—1888.*

DISTRICTS.	1883.		1884.		1885.		1886.		1887.		1888.	
	Average value of coal	Average price of mining	Average value of coal	Average price of mining	Average value of coal	Average price of mining	Average value of coal	Average price of mining	Average value of coal	Average price of mining	Average value of coal	Average price of mining
First	\$1.59	\$0.917	\$1.40	\$0.906	\$1.41	\$0.867	\$1.32	\$0.859	\$1.316	\$0.891	\$1.3696	\$0.8886
Second	1.97	.968	1.79	1.00	1.71	.941	1.57	.927	1.497	.927	1.4735	.9181
Third	1.45	.875	1.31	.873	1.25	.814	1.16	.729	.905	.688	1.1884	.7055
Fourth	1.33	.71	1.09	.694	.985	.62	.969	.573	.887	.576	.9470	.6186
Fifth	1.26	.619	.961	.60	.894	.511	.862	.501	.823	.537	.8575	.5586
The State	1.48	.802	1.26	.738	1.17	.725	1.11	.676	1.085	.727	1.1236	.7171
Ratio of the price of mining to the value of coal	54%		62%		63%		61%		67%		64%	

The foregoing deductions point to the general conclusion, that as the value of product and the price paid for mining decrease, the share of the total value which the miner receives increases. In the last year this share appears as 64 per cent. as against 67 per cent. the year preceding, because of the fact that the movement was not uniform in values and prices,—the former having increased about four cents per ton while the latter decreased one cent per ton. It should be borne in mind that these figures refer only to prices paid for mining with the hand-pick, and such labor as that system implies. Somewhat more than 80 per cent., however, of all the coal produced in this State is at present mined by hand.

MINING WITH MACHINES.

The process of mining coal has from the earliest period been exclusively a hand-process, and that of the ruder sort, requiring strength and endurance rather than a high order of skill; and the conditions under which it is necessarily performed have seemed, until recently, to defy the application of power machinery to this industry. In recent years, however, this process has been attempted, and in a measure successfully accomplished, by means of machines driven by compressed air, which perform the under-cut-

ting of the coal in a manner very similar to that of the miner with a pick, though with greater rapidity, and, where the conditions are favorable, at a less cost per ton to the operator of the mine. The most successful of these machines was invented in this State, and has been introduced and is now in use at so many of the principal mines, that a special inquiry as to the present development of machine-mining, and the peculiarities of employment which it involves, has been made for this report.

The statistics of the subject, briefly stated, are, that during the year 1888, there were 272 mining machines in use in this State and that with them 3,088 men produced 2,243,210 tons of lump coal; in other words, nearly 20 per cent. of the whole output was mined by machines, operated by 10 per cent. of all the men. Of these machines 245 are of the Harrison patent, 17 are the Legg or Lechner machines, and 10 are Yock machines. Distributed geographically, 218 machines are in use in the fourth and fifth districts, embracing the central and southern portions of the State and with them 2,673 men produced 2,055,895 tons; that is to say, 80 per cent. of the machines, employing 86 per cent. of the men and producing 92 per cent. of the coal mined by machines are in this territory. Tabulated in detail the distribution is as follows:

DISTRICTS.	NUMBER AND KINDS OF MACHINES IN USE.			Total tons produced.	Number of men employed.
	Harrison.	Legg.	Yock.		
First district	30	3	151,518	962
Second district.....	6	2	4,735	79
Third district.....	8	5	31,062	94
Fourth district.....	114	6	1,112,002	1,230
Fifth district.....	87	1	10	943,893	1,433
The State	245	17	10	2,243,210	3,088

In many places the use of mining machines has been largely experimental during the year, so that the reported results as summarized do not always afford a true index of their capacity at steady work. This is especially true of the second and third districts, in the former of which the machines reported have been used in driving entries and in other irregular or special work, while in the third, the use of the machines has not been sufficiently uniform to make

a fair showing for an entire year. In the first, fourth and fifth districts the machines have had the most extended trial and the results show more fully what may be expected of them under favorable conditions. Grouping the figures in these districts, it is found that 251 machines, operated by 2,915 men, have produced 2,207,413 tons, or 757 tons per man, and 8,795 tons per machine. But the coal in the first district is not much more than half the thickness of that in the other two, consequently the product per man and machine should be correspondingly less. Computed separately, the product in the first district is 626 tons per man, and 4,591 tons per machine; while in the other two it is 761 tons per man and 9,431 tons per machine. An exact deduction as to the performance of these machines can only be made, however, upon a consideration of the actual number of days in the year in which they were operated. This does not appear definitely in the schedules for the reason that the working time for the machines is not separated from that of men mining by hand. It is sufficiently established, however, that there are advantages in the use of machines under favorable conditions, but that they cannot be uniformly applied with profit. The specific facts concerning the use of machines in the several districts may be learned from the reports of the inspectors.

The advantages derived from machinery in mines are very much the same as those which flow from the use of machinery everywhere. They consist not only in the greater execution of the machine, but in the subdivision of labor which it involves, and the greater *per capita* efficiency of the force thus secured. The gain is consequently to the employer rather than to his men. The mining machine is in fact the natural enemy of the coal miner; it destroys the value of his skill and experience, obliterates his trade, and reduces him to the rank of a common laborer or machine driver if he remains where it is. The older miners cannot readily adjust themselves to the change, and seek other fields; if possible, those where the machine cannot come. The younger men remain and adapt themselves to the peculiar forms of endurance which the machine demands, or devote themselves to the development of special skill in some of the new divisions of labor which it creates.

The mining machine not only revolutionizes the methods of work, but it equally changes the system of wages. The coal miner proper takes his own tools into the pit, and undertakes to deliver from the wall of mineral before him certain tons of coal ready for market, for a certain sum per ton. His earnings depend upon himself, and the better the man the better the pay. He mines and drills and blasts and loads his own coal, timbers his own roof, takes care of his own tools, and is responsible mainly to himself both for his personal safety, and the amount of his output.

In the machine mine it takes seven or eight men to perform these various functions, and, in the mine as in the mill, the machine is the master and the men are its servitors. The operator of the mechanism simply directs its energies, when the motive power is given to it, and the coal is undercut or mined; the blaster follows with drills and explosives to loosen the mass; the loaders reduce it and shovel it into pit-cars; the timbermen follow and prop the roof which no longer has the mineral to rest upon; laborers assist in every process, and a machinist is retained for repairs. Each one does his certain portion of the work and no more, and doubtless does it better as well as faster by reason of his greater skill thus acquired; but this is only one small talent at the best, and chiefly consists in that sort of activity and hardness, which is common to all good workmen, and which qualifies any good workman to take his place. Herein lies the chief value of the machine to the mine owner. It relieves him for the most part of skilled labor, and of all the restraints which that implies; it opens to him the whole labor market from which to recruit his forces, it enables him to concentrate the work of the mine at given points, and it admits of the graduation of wages to specific work, and the payment of wages by the day. These conditions signify a more effective organization of the working force, and doubtless reduce the ultimate cost of production, even though the output be not materially increased.

On the other hand the system is not without advantages to those actually employed under it, though the old hand-miner be in many instances displaced. To them accrues the benefit of having the explosives handled and the blasting done by experts, and of having the roof properly and uniformly supported by skilled timber-

men, thus reducing the personal danger which often arises under the old system from the incompetence or carelessness of fellow-miners; for the present also the machine mines are offering somewhat more steady work, and there is, in the gradations of employment and of pay, a measure of incentive to attain the better positions. These however are mere incidentals; the direct and great advantages of the machine accrue to the mine owner, and this invention will do no more than others before it to lighten the labors of the man who uses it, or to make it easier or pleasanter for him to live.

The terms of employment and the subdivisions of labor under the system inaugurated by the machine process of mining is set out in the following table:

Labor and Wages

Averages.

* The wages paid by the Consolidated Coal Company during the winter months were: Cutters, \$2.50; helpers, \$1.90; blasters, \$2.25; loaders, \$1.90; timbermen, \$2.25.

f Average: Two seams 6 feet, two 6 feet 6 inches, and one 8 feet 6 inches thickness.

g Average: One seam 6 feet, and one 7 feet in thickness.

h Average: Two seams 6 feet 8 inches, and one 7 feet 6 inches in thickness.

i Average: One seam 7 feet 6 inches, and one 8 feet in thickness.

k Average: One seam 7 feet, and one 7 feet 6 inches in thickness.

This exhibit covers the number and kinds of machines in use; the thickness of the coal in which they are used, and the manner of working it; the number of men employed, and the rate of wages paid to each class of employes. There are found to be three rates of wages, the lowest, to loaders, laborers and helpers; the next, to blasters and timbermen; the highest, to the men who actually direct the machine. For the most part the payment is by the day, but in a few instances the cutting is done by the yard or foot, and the blasting and loading by the ton. The day's wages vary

machines; yet the tendency to mechanical mining is undeniable, and the demand for it may be expected to develop new and cheaper methods of securing it.

THE NUMBER OF EMPLOYEES.

As should be expected from the greater output, the number of persons who have gained their livelihood through this industry during the year is materially larger than in the year preceding.

The statistics of employes for a series of years may be summarized as follows:

	Miners.	Others.	Totals.
1882.....			20,290
1883.....	20,839	3,100	23,939
1884.....	20,610	4,965	25,575
1885.....	20,772	5,174	25,946
1886.....	20,973	4,873	25,846
1887.....	21,158	5,646	26,804
1888.....	23,648	5,762	29,410

These are the numbers reported each year by the employers, as the average number employed during the winter or busy season, which comprises in general about eight months. Of course it cannot be exact, as the number of men at work at each place fluctuates from week to week with the demand for coal, but the figures are doubtless substantially correct for the maximum of employes.

The number at work during the summer months is materially less, though the unemployed are usually seeking other occupations in the vicinity, and are available at the mine, if required.

The increase in men over those employed in 1887 is nearly 10 per cent., but the increase in output is $15\frac{1}{2}$ per cent. The product per mine for 1887 was 486 tons, and for 1888 was 501 tons.

Of the whole number of employes, 3,088, or practically 10 per cent., are engaged in machine-mining. Dividing the tonnage cut by machines by this number of operatives, it is found that the *per capita* product under this system is 726 tons per man. This, however, is the deduction as to all machine work and all men engaged in it; a former deduction (page 339 *ante*) shows the specific performance of machines in selected localities where there has been the least hindrance to continuous and systematic work.

The statistical fact, however, which it is the special purpose of this paragraph to accentuate, is, that there are in this State 29,410 employes, who, with their families, are dependent upon this industry for their support, and who prosper or suffer according to the amount and the terms of the employment it affords them.

WORKING TIME.

In the subsequent table of summaries for the State, it is found that a level average of the days of active operation during the year for all mines of all sizes is 195.8 days; for the year preceding, the corresponding average was 183.8 days. But these averages include the time of a great many small mines which are worked during the winter only, and all mines which have been operated for fractional parts of the year, either because newly opened or abandoned during the year. It has been the practice, therefore, in order to arrive at a just conclusion as to the real proportion of full time which has been devoted to mining the output of the State, to eliminate all mines of irregular or partial delivery, and deduce an average of working time from those only which are carried on continuously throughout the year, so far as the demand for coal permits it.

Our lists show a total of 313 mines characterized as shipping or commercial mines. From these are selected 282 whose returns indicate that they were operated continuously, so far as possible, and which are believed to be truly and fully representative of the industry as a permanent business, in this State. This group of mines delivered 93 per cent. of the total product of the State, gave employment to 88 per cent. of the men, and were in active operation an average of 220.6 days each during the year; that is to say, 93 per cent. of the total product was raised in 71.3 per cent. of full time. A corresponding calculation made from the returns of the year preceding gave an average of 213.2 days, or 68.7 per cent. of full time. Analyzed by districts, the experience of 1888, as relates to working time, is reducible to the following averages:

Districts.	Average No. of days.	Per cent. of total product.	Per cent. of total employée.
First.....	216	97	95
Second.....	219	82	71
Third.....	219	91	89
Fourth.....	230.7	95	91
Fifth.....	219	94	88
The State.....	230.6	93	88

These deductions are obtained from the experience of the industry as a whole. In a former table giving the experience of 85 of the largest mines, it is shown that they delivered 52.4 per cent. of the total product of the State, gave employment to 47.3 per cent. of all the men, and made an average of 227.2 days of running time.

The following statement epitomizes by districts the results of the year's operations in the 282 mines which produced 93 per cent. of the total output of the State:

Districts.	No. of mines.	Av. No. of men per mine	Average days worked.	Average tons per man per annum.	Average tons per day per mine.
First.....	37	221.5	216	340.2	363
Second.....	32	109	219	304.6	151.3
Third.....	80	58.3	219	428	114
Fourth.....	51	90.8	230.7	587	231
Fifth.....	82	59.8	219	506.9	137.3
The State.....	282	91.7	230.6	437	177.3

THE STATISTICS OF POWDER CONSUMPTION.

Following the practice of former years a special compilation has been made for 1888 of the quantity of powder consumed in the mining of coal in this State, and the results are herewith presented in tabular form for counties, districts and the State:

Consumption of Powder in Hand-Mining—1888.

	Williamson.....	3	5	5,626	42	8.4	184

These are the facts in regard to the consumption of powder in those mines in which coal is mined by hand and by the pillar-and-room system, and they are taken mainly for the purpose of showing the relative cost to the miner, so far as the element of powder is concerned of producing coal from the various seams. The long-wall mines are omitted from this list, because under that system the coal is usually brought down without the aid of explosives; the machine mines are omitted because in them the

powder is furnished by the company and not by the men. A subsequent table, however, shows the consumption of powder per ton in machine mines exclusively.

The statement in the foregoing table is, in brief, that there were 159,908 kegs of powder used in 414 mines, by 10,205 miners, in the reduction of 5,972,796 tons of coal, or an average of 15.69 kegs of power per annum to each man, and 37.35 tons of coal per keg of 25 pounds. The chief value of the exhibit, however, rests in the details shown as to the amount of powder required in different localities. Considered by districts, nearly half of the whole, or 44 per cent., is found to have been consumed in the third, 25 per cent. of the whole in the fourth, 20 per cent. in the fifth, and only 11 per cent. in the first and second together. The *per capita* consumption is in similar ratio, being 23.60 kegs in the third district, 21.1 in the fourth, 12.4 in the fifth, 11.93 in the second and 4.43 in the first. Referring to counties, the greatest amount of powder per man is used in Macon county—Logan, Peoria, Sangamon and others following in the order given. While the average number of tons produced per keg, for the State at large, is 37.35 the range is from about 20 tons to 215 tons per keg; and while the average number of kegs per man for the State is 15.69, the range is from 2 in LaSalle county to 41.2 in Macon county.

As a counterpart of this statement in regard to the use of powder in hand-mining, the following table is prepared, showing facts of a corresponding character in regard to mines operated by machines:

Consumption of Powder in Machine Mines.

	The State	25	209	2,552	1,916,091	19,725	97.14

This table gives the distribution and the efficiency of explosives as used in mines operated by the machine process. The statement covers 25 mines in which machines are used exclusively, and in these mines 19,725 kegs of powder were used in reducing 1,916,091 tons of coal, which is equivalent to an average product of 97.14 tons for each keg. In the hand mines, as shown in the former table, this average was 37.35 tons per keg. This variation, as an average for the State, may be occasioned in some measure by local conditions, but a comparison of results in mines operated by the two systems in the same localities and seams, indicates very clearly that there is far greater economy of powder in the machine system than in the common methods of mining. The one exception to this rule seems to be in LaSalle county, where in 16 hand-mines, only 4 of which, however, are mines of importance, the average product of explosives is 215 tons per keg, while in the one exclusively machine mine the product is only 153 tons per keg.

The classification in the two preceding tables accounts for a total of 159,905 kegs of powder consumed in hand mines, and of 19,725 kegs in machine-mines, making an aggregate of 179,633 kegs out of a grand total of 190,710 kegs reported as consumed at all mines.

The remainder consists of the portion consumed in mines where both the machines and hand-miners are employed, and in various places the statistics of which do not admit of exact analysis.

THE KILLED AND WOUNDED.

With the increase in working force, and in tonnage, which characterizes the year, there has also been an increase in the number of lives lost among the people engaged in this industry. The ratio of increase in this respect is even greater than that in either the numbers employed or tons produced. Sudden death has overtaken 55 men during the year, as a result of the hazards of mining, and 179 men have met with more or less serious accident. This is a larger number of victims than in any year since 1883, when there were 134 men killed, of which number 69 were buried alive in the Diamond mine at Braidwood, and 10 were killed by an explosion at Coulterville. No such general catastrophe as either of these has occurred in this State since 1883, and the total of recent losses of life is made up of individual deaths from special causes.

Of the 55 victims of fatal accidents reported for the current year, 28 were men of family, and 27 were unmarried. By these deaths 27 wives were made widows, and 89 children were rendered fatherless. The facts in this respect for the last three years are as follows:

Years.	Deaths.	Widows.	Fatherless children.
1886.....	52	30	76
1887.....	41	22	77
1888.....	55	28	89
Totals.....	148	80	242

These are the facts for what may be considered normal years, in which have occurred only such accidents as seem inevitable among so many men so continuously exposed, and they indicate a yearly loss of 50 lives as a concomitant of coal mining in this State, and a yearly increment to the dependent classes of 27 widows, and 80 orphans.

The statistics of casualties in and about the coal mines of Illinois have been taken now for six years, and the results of the inquiry, together with corresponding statistics of production, are herewith presented:

Casualties and Production.

YEARS.	Number killed.....	Number injured.....	Total number of men employed.....	Total number of tons of coal produced	FATAL CASUALTIES.		NON-FATAL CASUALTIES.	
					Number of employees to each life lost.....	Number of tons of coal produced to each life lost...	Number of employees to each accident.....	Number of tons of coal produced to each accident.....
1883.....	184	281	23,989	10,080,991	179.6	74,858	108.6	43,434
1884.....	46	197	25,575	10,101,005	556	219,597	129.8	51,274
1885.....	39	176	25,446	9,791,874	652.4	251,074	144.6	55,684
1886.....	53	169	25,846	9,246,435	497	177,816	153.5	54,713.
1887.....	41	180	26,804	10,378,890	654	244,735	149	57,106.
1888.....	55	179	29,410	11,855,188	534.7	215,549	164.3	66,241
Totals	367	1,122	157,020	61,804,838
Averages	61.1	188.7	26,170	10,217,397	427.8	167,042	138.7	54,156

This record gives a total of 1,499 killed and injured during the six years from 1882 to 1888 inclusive, of which number 367 were killed, and 1,132 injured. The degrees of injury, however, take a very wide range, as reports are made of all injuries which involve loss of time on the part of the workman; but practically such slight injuries as require only a trifling suspension of work are not included. A certain portion of the injured are permanently disabled, but as it is difficult to trace many of the more serious cases to their issue, the exact number of those who fully recover cannot be stated. Something of the nature of the injuries received and the degree of their severity may be learned from the following statement of the cases reported for the year:

Nature of Injuries.

INJURIES.	DISTRICTS.					TOTALS.	PER CENT.
	First.	Second.	Third.	Fourth.	Fifth.		
Arms bruised.....	2	2	2	6	3.4
Arms broken.....	4	1	5	2.5
Backs injured.....	6	3	3	1	1	14	7.5
Bodies injured.....	14	7	18	6	11	56	31.3
Collar bones broken.....	2	1	1	2	6	3.4
Feet injured.....	3	2	4	2	1	12	6.2
Hands injured.....	1	3	2	3	9	5
Heads injured.....	4	3	2	2	3	14	7.5
Legs broken.....	18	12	7	1	5	43	23
Legs injured.....	4	3	1	1	5	14	7.5
Totals.....	58	34	40	18	29	179	100

Two of the above had each an arm and a leg broken; one had both legs broken; one had both foot and hand injured, and another was crushed both in body and limbs. The greater number of injuries are occasioned by the falling of the roof, and it is impossible to know, until time developes it, how serious an internal hurt may have been sustained. The causes, as distinguished from the consequences of the accidents of the year, are classified as follows for both the fatal and non-fatal events:

Fatal Casualties.

Causes.	First District.	Second District.	Third District.	Fourth District.	Fifth District.	Totals.	Per cent.
Blast discharge.....	2	2	4	7.1
Cages.....	1	1	2	3.5
Coal falling in mine.....	5	1	1	7	12.7
Falling down shaft.....	2	2	4	7.1
Gas explosion.....	1	1	1.8
Pit-cars and machinery.....	3	1	2	6	11
Powder explosion.....	1	3	4	7.1
Railroad cars.....	1	1	1.8
Rock falling in mine.....	11	1	5	4	5	26	63
Totals.....	19	5	20	8	13	55	100

Non-Fatal Casualties.

Causes.	First District.	Second District.	Third District.	Fourth District.	Fifth District.	Totals.	Per cent.
Blast discharge.....	1	4	5	2.8
Cages.....	4	1	3	3	1	12	6.7
Coal falling in mine.....	8	14	7	5	1	35	19.5
Falling down shaft.....	3	5	8	4.5
Gas explosion.....	1	2	3	6	3.4
Pit-cars and machinery.....	7	3	10	1	5	26	14.5
Powder explosion.....	3	1	4	2.2
Railway cars.....	2	4	6	3.4
Rock falling in mine.....	35	13	13	3	13	77	43
Totals.....	58	34	40	18	29	179	100

As usual, the greater number of these deaths and injuries have been occasioned by the falling of coal or rock on the working miner. This is a constant source of peril to the miner, and the statistics of a series of years show that about two-thirds of all casualties are of this nature.

THE NEW DANGER IN MINES.

In recent years the attention both of practical and scientific authorities in mining has been especially directed to a certain class of explosions in mines, the causes of which have seemed to require some other explanation than any of those usually accepted in such cases.

The two agencies which are most carefully guarded against as threatening destructive explosions are the common blasting powder used in mines, and the gas known as fire-damp, which is liberated in working the coal under certain conditions, and which is highly inflammable and, when combined with a certain portion of air, becomes a resistless explosive if brought in contact, in sufficient quantity, with an open light. Danger from powder arises from the careless or ignorant use of it, and in keeping too great quantities of it, insufficiently protected, in the mine. The danger from fire-damp consists in permitting it to accumulate, or in approaching it with a naked light. But as both these forms of peril have

always attended coal mining, in all places where powder has been used or gas has been found, very effective measures have been gradually developed for anticipating and preventing the dangerous consequences of their presence. The use and handling of powder has been regulated by experience, by local rules, and in foreign countries, especially, by laws, all of which have greatly reduced the general hazard from this agent. The detection and removal, or dilution, of fire-damp has also been made a subject of study and scientific experiment from the earliest times, and its nature, sources, and characteristics are perfectly understood, and the various forms of safety lamps now in use enable miners to detect its presence with certainty, even to work in small quantities of it, and at least to escape from it, under ordinary conditions,

Several years ago, however, a number of most disastrous explosions occurred in the North of England, in mines in which no accumulations of gas were known to exist, at all sufficient to cause the wide-spread destruction presented, nor were such accumulations considered possible. Moreover, the nature of the results was in many respects different from those ordinarily attending explosions, either of fire-damp or any other recognized explosive agency. Conspicuous among cases of this kind were the explosion at Seaham in 1880, which occasioned the loss of 164 men; those at Trimdom Grange, Tudhoe and West Stanley, in 1882, by which 124 lives were lost, and that of Usworth, in 1885, causing the death of 42 persons.

In the apparent absence of fire-damp in sufficient quantities to produce the given results, and in view of the peculiar effects produced, a general interest was awakened in these and similar cases which led to a most searching and exhaustive inquiry into the causes which occasioned them. These investigations developed a strong presumption, subsequently confirmed by further observation of similar occurrences, that the active agent was the fine impalpable dust of coal which under certain conditions pervades the atmosphere and settles on all the objects in the mine. This dust is of itself highly volatile and inflammable, though harmless under ordinary circumstances. When disturbed, however, by concussion, and brought simultaneously in contact with the flame of a powder blast, especially if there is a trace of fire-damp present, or a cloud of inflammable powder smoke, the combination proves an explosive mixture of the highest power.

Recent events in this country have emphasized and confirmed this conclusion as to the peril inherent in coal dust. The explosions at Kettle Creek, Pa., at Rich Hill, Mo., and at Frontenac, Kas., all disastrous, and inexplicable upon common theories, may be accounted for if the potency of this agent is recognized and its presence established. In fact, these and other less conspicuous cases confirm the belief that this fine dust of coal which pervades dry mines may be ignited and explode with terrific force, first and most certainly, where fire-damp is known to be generated, though not in sufficient quantity to be dangerous in itself; second, when disturbed by the concussion of a blast and brought simultaneously in contact with the powder flame, or as a result of a blown-out shot without concussion. These are what may be termed the normal exposures incident to mining coal; in addition to these are the dangers arising from the careless handling and storing of excessive quantities of powder in the works. Miners are notorious for their indifference to the dangers which surround them, and not unfrequently ignite powder in greater or less quantities by accident. The consequences may ordinarily be local, but, in the presence of coal dust, the initial force of a local explosion may be vastly intensified by communicating flame to other powder and other dust at a distance, and thus creating general havoc.

The pertinence of this special mention of the recently defined causes of certain explosions in mines, lies in the fact that all the essential conditions for an explosion of this kind and of the first magnitude are found in many Illinois mines, and that in several instances, recently, minor explosions, directly traceable to the ignition of dust, or of gas and dust, or of powder smoke and dust by the flame from shots, have actually occurred, and barely escaped becoming general, and fatal to all the men and property exposed. In 1883 there was an explosion in the mine at Coulterville in this State, by which ten men were instantly killed, but the causes of which were never satisfactorily explained, since the quantity of gas found was not regarded as sufficient to produce the results. It was, however, a dusty mine, and there was some fire-damp in it, and at the time of the explosion shots were being fired. There is in fact but little explosive gas found in any of the mines of this State, but in many of the dry mines there is enough to ignite coal dust, and the two are in perilous contiguity.

In view of these facts there should be no question as to the propriety of and necessity for the proposed amendments to the general mining law, requiring, first, that all dry workings where coal dust is created should be systematically sprinkled; that no more powder should be allowed in the mine than enough for one day's work; that no drill-holes should be charged with loose powder, and that cartridges should be loaded only by the use of cans made for the purpose.

Inspectors should also warn the managers of mines against the use of such inferior grades of powder as produce excessive quantities of dense and inflammable smoke. Powder can now be obtained which is comparatively smokeless, and of great energy, while its effects after combustion are far less injurious to the miner than those of the powder commonly used.

In view of the existing conditions, here referred to, in many of the larger mines of the State, some great catastrophe may justly be feared, unless the utmost caution and vigilance be exercised, with full knowledge of the nature and sources of the impending danger.

The following general tables, for the State at large, summarize, first, the statistics of all mines, grouped by districts; and, second, the special statistics relating to the mines in which machines are used. These tables are followed by the text, and tables by counties, of the several State Inspectors of mines,—the county tables being presented in alphabetical order in the districts in which they are severally located:

Statistical Summary, showing the Number, Character, Product, etc., of the Coal Mines of Illinois, for the year ending July 1, 1888—By Districts.

FIRST DISTRICT.

MR. JOHN S. LORD,

Secretary of the Bureau of Labor Statistics, Springfield, Ill.

DEAR SIR:—In compliance with the law defining the duties of inspectors of mines, I herewith submit the fifth annual report, for the year ending July 1, 1888, embracing statistics of the production, etc., of all the mines in the first inspection district, consisting of the counties of Grundy, Kankakee, LaSalle, Livingston and Will.

On entering upon my commission October 1, 1887, I received valuable information from my predecessor, Mr. Alexander Ronald, as regards the condition of the mines, and other matters which would require attention, together with the records belonging to the office.

The records of the coal trade for the fiscal year show an increase in the output for all the counties with two exceptions; in LaSalle, the decrease is due to the strike of the engineers and firemen on the C., B. & Q. railroad, as this system handles the largest portion of the coal mined around Streator; those mines having no other railroad connection were obliged to shut down. The Chicago, Wilmington and Vermilion Coal Co. suffered the greatest loss on this account, as both No. 1 and 2 shafts were on that road, but the owners connected their No. 2 shaft with the Sante Fe railroad, which assisted them through till matters were adjusted. Their loss in production was between 50,000 and 60,000 tons of coal. Other companies suffered also, especially the Coal Run Coal Co., and the Streator and Wilmington Star Coal Co.

The total output in tons for the year 1888 is.....	2,877,794
For the year 1887	2,686,829

Increase	190,965
----------------	---------

Number of miners employed in winter	6,847
Number of other employés in winter.....	1,776

Total	8,623
-------------	-------

Number of accidents—fatal.....	19
“ “ non-fatal.....	58
Total number of casualties	77
Number of employes to each fatal casualty	448
“ “ “ non-fatal casualty	129.6
Number of tons produced for each fatal casualty.....	151,463
“ “ “ “ non-fatal casualty....	49,615
Number of tons mined by machine.....	151,518
Number of employes connected with the same.....	242

MACHINE MINES.

There is one mine in the district in which the under-cutting is entirely done with machines, it being the Chicago, Wilmington & Vermilion Coal Co.'s No. 2 mine. This mine is well equipped in every respect, as it was intended to be made a model machine mine by the company's officials, but the seam was found to be faulty and full of clay slips, horsebacks, etc., and under such circumstances, the product of the machines cannot be economically compared with hand-mined products in clear strata. At Matthiessen & Hegler's mine the machines are only used in driving the rooms, as they have found by experience that it is more economical to extract the pillars by hand-mining; this is due to the low under-cutting made by the Legg machine, also the space required to operate it, for in general at pillar-work the props have to be kept close up to the face of the coal. Taking the amount of coal produced by the machines we get an average for each machine of 1,591 tons, and for each man connected with machines an average of 626 tons, so that each machine with attendants produced the same quantity of coal as thirteen men in hand-mining. As a great portion of the coal produced in the district is by the long-wall system, a system in which machines have been tested and have proved unsuccessful, it is likely that the tendency to adopt mechanical in place of hand-mining will be limited in these coal fields.

THE AMENDMENTS OF THE LAW.

I am very glad to report that in all the principal mines the late amendments have been complied with when the necessity for it was shown. In examining the mines I have met boys at work who from their appearance were under 14 years of age, but on taking their names, and applying at the company's office, I found their certificates on file, and the boys to be over 14 years of age.

Only on two occasions has it been necessary to stop operations for insufficient ventilation, and that only for a day or two, to clear up part of the return airway. The report book generally in use in which the mine examiner states the condition of the mine is

the one issued by a publishing company of Peoria, which includes a report of the condition of the boilers, machinery, chains, cages, safety catches and the mine. The system of signals is now uniform in the principal mines in the district which was necessary especially where the miners are in the habit of waiting more than thirty minutes after they stop hoisting coal for the day. Before the signals became uniform it was not unusual to find miners who did not know how to give the signal to ascend out of the mine, as quite a number of the miners have only followed mining since arriving in this country, and are inexperienced in the workings of a mine.

LIST OF MINES ABANDONED DURING THE YEAR.

In Grundy county the C., W. and V. Co.'s "K" shaft, Godley, and the W. Star Co.'s No. 4 shaft, Coal City; in LaSalle county, Penman & Co.'s shaft, Streator, and Watkins & Law's shaft, Marseilles; the Coal Run Coal Co.'s Eagle shaft at Streator, not included in tabulated report, was operated only for a short time removing the bottom pillars; in Livingston county, the River Bank Co. No. 2 shaft, Streator.

MINES NOT IN OPERATION DURING THE YEAR.

In Grundy county the Eureka Coal Mining Co., Braidwood; in LaSalle county, Burgess Toll, Utica, and J. Clark, Lowell; in Kankakee county the James Kerwin & Co. mine, Tracy, which was bought by Taylor Williams,—the men still being unable to get their pay.

LIST OF NEW MINES OPENED DURING THE YEAR.

In Grundy county, W. & S. Star Co.'s No. 2 shaft at Coal City; Cryer & Wren shaft at Morris, and C., M. & St Paul Co.'s No. 3 shaft reopened at Braceville; in LaSalle county, Penman & Co. shaft at Streator, Osborn & Crewe shaft at Kangley, and W. & S. Star Co. No. 2 shaft also at Kangley; in Livingston county, John Edwards shaft at Streator; in Will county, C., W. & V. Co. "L" shaft at Braidwood, and Miners Coal Co.'s shaft also at Braidwood.

The Chicago, Wilmington and Vermilion Coal Company of Braidwood, have sunk a new shaft named the "M", about one-half mile east of the "K", and will put in Cherry's self-dumping cages, also one of Ramsay's coal distributors, both of which will effect a great saving in the handling of the coal at the top of the mine. Mr. Hart has sunk a shaft at Garey, on the Illinois Valley & Northern railroad, about six miles from Kangley, he got seam No. 7 at a depth of 65 feet, and has started to enlarge his shaft and put in stronger timbers.

PROSPECTS FOR FURTHER DEVELOPMENTS.

There has been an unusual amount of prospecting with the drill during the summer, chiefly along the I., V. & N. railroad, also in Kankakee county near the town of Reddick; the C., W. & V. Coal Co. of Braidwood, have had two drills at work for some time at Streator; also the same company have started a drill near to their old No. 2 shaft, for the purpose of testing the lower seam, or No. 2 of the geological section. A company of Streator capitalists have bought a large tract of land at Garey and have had two prospecting holes put down with the ordinary drill. The W. & S. Star Co. have purchased a large tract of land near to Tonica, LaSalle county, and are prospecting with the Diamond drill, and will, in all probability, develop it soon.

ACCIDENTS.

There have been during the year 19 fatal and 58 non-fatal accidents in the district, a large percentage of which occurred at the face of the working places. The general system in the mines in this district is to hold the miner responsible for the safe keeping of his road and face of working place, so that the only responsibility the employers have is to furnish the miner with a proper supply of material to protect himself. As the year past has been an exceptionally busy one in the coal trade, we may ascribe to this fact alone a number of the accidents, as men, when hurried, are liable to neglect the taking of necessary precautions for their own safety.

Following is a list of fatal and non-fatal casualties during the year.

Fatal Casualties in the First District.

There has been no litigation during the year, but I have made application through the States Attorney of La Salle county for an injunction to restrain the Chicago, Joliet and Streator Coal Company from operating their mine until they put down an escape-ment shaft; however, the company being in financial difficulties, and the business in the hands of a receiver, the court has not granted the application up to the present time.

Chief among the improvements in the sanitary condition of mines in the district, is in that of the La Salle shaft, where by reducing the length and increasing the area of the return airway. the volume of air has been increased to 15,000 cubic feet per minute, which also reduced the temperature about 9 degrees in the return airway. The Oglesby Coal Company have put in a heavier shaft to their fan, the old one being too light to get the speed required to ventilate the mine properly. Richard Evans has driven a new slope at his mine, which will when finished, reduce the length of the airways, and enable him to have a fresh current for each pair of entries. The Chicago, Wilmington and Vermilion Coal Company have remodeled the tower, etc., of No. 1 shaft, at the same time they have also put in Cherry's self-dumping cages, and changed their tail rope from the east to the west portion of the mine, the former portion having been abandoned permanently; this company have Cherry's self-dumping cages at all their mines now in operation.

The relationship between operators and miners has been harmonious during the year. At a joint meeting at Ottawa March 24, it was agreed to pay the same price for mining as last year, and in May representatives of the operators and miners of the Wilmington and surrounding coal fields, held a meeting at Braidwood, when they agreed to reduce the hours of labor at the mines to nine and a half hours per day, leaving the company work to be paid at the rate of ten hours per day; they also agreed to give a half-holiday each Saturday between the months of March and September. This is a step in the right direction, and the companies have been able to produce the same quantity of coal in the shorter time without any additional expense.

LEGISLATION.

In section twelve of the mining law the inspectors are required to recommend such further legislation as may be deemed necessary for the better regulation and safety of the mines.

In compliance with this section, I would earnestly recommend that the General Assembly, at the next session, make such addition to the mining law that mine managers in charge of mines shall be compelled to obtain certificates, either of competency or service, from an authorized board, said board to consist of an equal number of operators and miners; service certificates to be given to mine managers after oral examination of their ability to manage a mine, and producing evidence that they have been employed by the same company for a specified time in that position; and that such manager shall not be employed by any other company unless he shall have obtained a certificate of competency; mines in which less than ten men are employed to be exempt from the same. At all mines where the employes are lowered and raised by cages and steam power, I would suggest that a measure be passed compelling mine operators to have examined daily the machinery, cages and covers, safety catches, chains and ropes, by a competent person or persons, the condition of each to be truly recorded, by said person or persons, in a book kept at the mine for that purpose.

NEW TRANSPORTATION FACILITIES.

A large part of the mines in Coal City and Braceville will find an outlet for their products to the north and northwest this coming winter by the way of the Gardner, Coal City and Elgin R. R., a new branch railway which is being constructed between Gardner, Grundy county, and Elgin, Kane county, connecting with the Chicago, Milwaukee and Saint Paul R. R. at the last named place. The Illinois Valley and Northern R. R. will also be in running order in the fall, so that nearly one half of the shipping mines will have a more direct route for shipping their products to the northwest markets than formerly; this will place the operators in a better position to compete with the products of other coal fields which are shipped there and will tend to increase the coal production in the first district.

FIRES.

There have been two fires during the year in the district, the first being at Barrackman's mine, Streator, which destroyed the tower and other buildings. This fire originated from the spontaneous combustion of the slack in the gin-run, which had been burning for some time previous, and to which no attention was given. The other was at the "J" shaft of the C., W. & V. Co., Braidwood, in which the tower, engine and boiler buildings were destroyed; cause supposed to be the exploding of a lamp.

Respectfully submitted,

QUINTIN CLARK,

Inspector of 1st. District, Braidwood.

Grundy County—First District—1888.

* 151,518 tons mined by machines.

NOTE.—Coal mined by machines not included in computing the average price for mining, the men connected with machines being all paid by the day, with the exception of the cutters of the Union Coal Company, Peru, who are paid by the square foot. In the average value at the mine, the output of Mathlessen & Hegler's is not included, as all the men are paid by the day and no value given, as the coal is nearly all consumed at their zinc works.

SECOND DISTRICT.

MR. JOHN S. LORD,

Secretary of the Bureau of Labor Statistics, Springfield, Ill

SIR: In compliance with section twelve of an Act of the General Assembly defining the duties of State Mine Inspectors, and providing for the health and safety of persons employed in the coal mines of Illinois, I have the honor of submitting the fifth annual report as Inspector of Coal Mines for the Second Inspection District, for the year ending June 30, 1888.

The present report contains the usual tabular statements, giving the number of mines, commercial and local; the number of miners and other employés; the prices per ton paid for mining; the value of the coal per ton at each mine; the fatal and non-fatal accidents, also the causes and the extent of the injuries received therefrom.

The following summary of the number of miners and other employés, the number of tons of coal produced, the number of accidents fatal and non-fatal with ratios is presented for the year:

Number of employés—miners	3,964
Number of other employés, including boys over 14 years of age	930

Total number of employés	4,914
Number of tons of coal produced	1,293,187
Number of accidents—fatal	5
Number of accidents—non-fatal	34

Total number of accidents	39
Number of employés to each fatal accident	983
Number of employés to each non-fatal accident	144
Number of tons of coal produced for each fatal accident ..	258,637
Number of tons of coal produced for each non-fatal accident	38,035

The Second District contains twenty-two counties, eleven of which are coal producing, namely: Bureau, Hancock, Henry, Knox, Marshall, McDonough, Mercer, Rock Island, Schuyler, Stark and Warren.

For this year the counties of Bureau, Hancock, Marshall, Mercer, Schuyler, Stark and Warren combined, show an increase over the year previous of 273,382 tons, while the counties of Henry, Knox, McDonough and Rock Island show a decrease of 49,222 tons, leaving a net increase for the present year over the previous year of 224,160 tons.

To the foregoing may be added six accidents that have taken place at new shafts during the process of sinking, one of which was fatal, one serious and four slight.

The first took place April 21st, 1888, while a new shaft was being sunk by the Sparland Coal Co. at Sparland, Marshal county. Louis Climpson, aged 35 years and married, employed as top man at the shaft, while warming a stick of dynamite carelessly laid it against a red-hot stove, the dynamite exploded, shattering Climpson's hand in such a manner that it had to be amputated at the wrist.

The next accident took place at Ladd Station on the I. V. & N. R. R. in Bureau county, June 5, 1888. The Whitebreast Fuel Company had just commenced sinking a shaft on their newly acquired tract of coal land at the above place, and the shaft had been sunk through clay to a depth of 15 feet; the necessary timber had been expected on a certain train but did not arrive, and preparations were at once made to timber the shaft temporarily with such material as happened to be at hand, and the men were in the act of putting in some timbers when a large mass of clay fell from the side of the shaft nearly burying Robert Roberts, J. B. Morgan, T. F. Morgan, Philip Davis and John Mitchell. When rescued it was found that Roberts was fatally injured, having fallen with his head on the edge of a sinking bucket fracturing his skull, from the effects of which he died three days after the accident. Roberts was a single man 35 years of age.

The other four men were only slightly injured. All were practical sinkers and had come from Lucas, Iowa, for the express purpose of sinking the shaft.

The above six accidents have not been recorded and tabulated in regular order, as there is as yet no coal mine to which they can be charged, nor does our mining law contain any provisions relating to accidents in the sinking of new shafts.

Recapitulation of Fatal Accidents in the district for five years.

IMPROVEMENTS.

The number of ventilating fans in operation in this district continues steadily to increase, seven new ones having been erected during the year—three by the Quincy Coal Co., at Colchester, McDonough county; one by the Colchester Coal Co., at the same place; one at Taylor's local mine, near Pre-emption, Mercer county; one at the Galesburg Pressed Brick and Tile Co.'s shaft, at Galesburg, Knox county; and a second one added to the equipment of shaft No. 1, Spring Valley, Bureau county.

The law has been complied with, generally, in regard to escapement shafts, the most complete and costly ones constructed during the year being those at shafts No. 2 and 3, Spring Valley, Bureau county.

The escapement at shaft No. 2 is 357 feet deep, equipped with first-class winding engines working on first motion, by which coal is hoisted from the mine.

The escapement at shaft No. 3 is 481 feet deep, and will be supplied with hoisting machinery. Coal will also be raised at this shaft, making it similar in every respect to the escapement at shaft No. 2.

MINING MACHINES.

Mining machines have been introduced, to a limited extent, into Bureau county, during the year.

At Spring Valley, two Legg machines have been in operation for some time, both at shaft No. 2. One of the machines is used in what is known, locally, as the middle vein. (Seam No. 5 of the general section.) A pair of entries is being driven in an easterly direction from the shaft, with the intention of thoroughly testing the quality and thickness of the middle vein, and for this purpose, the Legg machine is being used.

The other machine is used in the third or bottom vein for a nearly similar object,—that is, driving into the solid coal for the purpose of winning, or acquiring a more extensive working force more rapidly than by the usual method.

Two Harrison mining machines have been in operation at Locey's mine, Loceyville, since January, 1898. They are being used as an experiment, which, if successful, will naturally cause them to be more extensively introduced into the county.

These machines will naturally give better results in a thick seam than in a thin one. The machines—Legg and Harrison—as at present constructed, do the mining or under-cutting, only, and will, as a rule, mine as many square feet, in a given time, in a thick seam as in a thin one.

Given, two seams of coal,—one $3\frac{1}{2}$ and the other 7 feet thick,—with all other conditions equal; and, assuming a price per running yard for mining of 20c.; a price per ton for blasting and loading

of 40c.; and a value for coal, on pit-cars, at the face of the room, of \$1.20 per ton; then assuming that we have a face of coal 20 yards wide, the mining of which would cost $20 \times 20c = \$4.00$, the seam being 7 feet thick and the mining 4 feet deep, we would have $60 \times 4 \times 7 = 1680$ cubic feet of coal, and allowing 35 cubic feet to each ton, which ought to be sufficient to cover all waste, we have 1680 divided by 35 equals 48 tons. The cost of blasting and loading will be $48 \times 40c = \$19.20$, which, added to the cost of mining, will give \$19.20 plus \$4.00 equals \$23.20 as the cost of 48 tons of coal on pit-cars, at the face of the room.

The value of 48 tons of coal, on pit-cars, at the face of the room, will be $48 \times \$1.20 = \57.60 , and $\$57.60 - \$23.20 = \$34.40$,—net profit.

And for the $3\frac{1}{2}$ foot seam, we have: Cost of mining 20 yards 4 feet deep, \$4.00; cost of blasting and loading 24 tons, at 40c. per ton, \$9.60,—making a total cost of 24 tons of coal on pit-cars, at the face of the room, of \$4.00 plus \$9.60 equals \$13.60.

Value of 24 tons of coal on pit-cars, at the face of the room, $24 \times \$1.20 = \28.80 , and $\$28.80 - \$13.60 = \$15.20$,—net profit. And $\$34.40 - \$15.20 = \$19.20$,—in favor of the thicker seam when all other conditions are precisely similar.

The feasibility of mining coal by machinery in Bureau county is simply probationary. That it will not be as successful as its most sanguine promoters could wish, is certain; that it may be moderately so, is barely possible, but anything definite must be left for a future report.

Four Harrison mining machines have heretofore been in operation at the Lathrop Mining Company's mine, at Kewanee, Henry county. They were taken out in August, 1887, and have not been used since. Whether they will be used again or not is at present uncertain.

NEW COMPANIES.

The amount of coal produced in this district has increased from 704,723 tons, in 1886, to 1,293,187 tons in 1888, an increase of over $83\frac{1}{2}$ per cent. in two years, and the end is not yet. According to present indications, the output of the district will increase at the rate of about 250,000 tons per annum until an annual production of at least 2,000,000 tons is obtained.

This result is made possible by the fact that two influential companies have purchased coal land in Bureau county during the year, and are at present in the act of developing it, and will undoubtedly be shipping coal in large quantities in the near future. This, added to the certain increase in the output of the Spring Valley mines, will produce the increase predicted.

The companies referred to are the Whitebreast Fuel Company, of Iowa, and the Chicago, Wilmington and Vermillion Coal Company. The former controls 12,000 acres of coal land, and is, at the present writing, sinking a shaft five miles north-west from Spring-

Valley, on the Streator & Walnut Branch of the C. B. & Q. R. R. Considerable difficulty is being encountered, owing to the soft nature of the ground to be sunk through, and the large quantity of water given off. These will be overcome, however, and, in all probability, coal will be ready for shipment early in 1889.

The C., W. & V. Co. have purchased 3,000 acres of coal land, including the local mine heretofore owned and operated by Seaton Bros., near Hollowayville, Bureau county. The work of enlarging the shaft and constructing $3\frac{1}{2}$ miles of railroad to connect the mine with the Streator and Walnut Branch of the C., B. & Q. R. R. was commenced about August 1st, 1888, and will be completed as soon as possible, and coal will be shipped during the coming winter.

The high commercial standing of these companies is a fair guarantee that their mines will be equipped and operated in such a manner as to conform to all the provisions of the mining law.

A company was organized at Sparland, Marshall county, early in the Spring of 1888, for the purpose of developing the coal at that point. Sinking was commenced in February, and coal was reached 164 feet below the surface April 25th, 1888. The coal is $2\frac{1}{2}$ feet thick, (seam No. 2 of the general section,) and similar to the coal produced at Wenona, in the same county. Machinery is being erected, and coal will be ready for shipment early in the fall of 1888. The mine is connected with the Bureau & Peoria Branch of the Chicago, Rock Island and Pacific Railroad.

LITIGATION AND STRIKES.

In one case, only, has it been found necessary to resort to litigation to enforce the provisions of the mining law during the year. Reuben Holgate commenced to raise coal from a shaft at Lombardville, Stark county, about January 1st, 1887. He was notified to either sink an escapement shaft or cease operations on or before January 1st, 1888. He refused to do either, and an injunction to prevent the further operation of the mine until the law was complied with was asked for and granted January 12th, 1888.

Since that time an escapement has been constructed, and the mine is again in operation.

No strikes or other labor troubles, serious enough to call for special mention, have occurred during the year. The prices paid for mining have remained about the same as during the year previous, and the relations existing between the miners and mine owners have been, on the whole, pleasant and satisfactory.

Yours Very Respectfully,

THOMAS HUDSON,

Inspector for 2d District,

Galva.

THIRD DISTRICT.

MR. JOHN S. LORD,

Secretary of the Bureau of Labor Statistics, Springfield, Ill.

SIR: In compliance with the mining law defining the duties of mine inspectors I herewith submit to you the fifth annual report for the Third Inspection District.

This report contains a statement of the improvements in general that have been accomplished during the year; the new mines that have been and are being opened out; the progress of coal mining machinery compared with hand-mining; a tabular statement of the total output of coal; the relations between employer and employes; a list of fatal and non-fatal accidents, etc.

The chief duties of the mine inspector are to examine the mines with respect to their safety and sanitary condition, and to see that the laws on the subject are enforced.

That portion of the law relating to the safety of the miners is generally enforced and the result has been to greatly reduce the number of accidents. Of the 135 fatal and non-fatal accidents last year only four are traceable to the neglect on the part of the operators to comply with the law.

One of the principal dangers to which miners employed in shafts, are daily exposed, arises from their being raised and lowered by machinery in going to and from their work. To counteract this danger, as far as practicable, I have had the greater number of the large operators in this district adopt a system of having the hoisting ropes, cages, etc., examined daily by a competent person, and a statement of such examination then written out and signed by the examiner. The engineer is also required to examine the external parts of his engine, the machinery, the boiler and its fittings, and to make a statement of the same with his signature attached. Since the adopting of this daily examination of the hoisting equipment in general I have on later visits found, as a rule, that the whole is being kept in better order than formerly, because there is now some one responsible for the condition of the machinery etc., whereas formerly it was the business of no one in particular.

All the measures prescribed by the mining law for the safety of those employed in mines, such as escapements and their equipments, man-ways, signals, places of refuge and the general safety of the hauling and traveling ways, are as a rule well complied with by most of the operators. There are no unfinished escape-ment shafts in the district which are over due.

The sanitary condition of the mines is better than during previous years. There have been nine new ventilating fans erected in the past year, four of which have taken the place of furnaces, and three are in place of fans which were too small for the requirement, while two have been put on new openings. This makes 43, out of a total 225 mines, ventilated by fans. It looks very small when compared with the total number of mines, but these 43 mines employ in summer 2,020 miners out of a total 2,681, which leaves only 661 miners divided amongst 182 mines which are ventilated either naturally or by steam jet or furnace; this number is no doubt proportionally largely increased in the latter mines in winter time. In cold weather there is never any lack of ample ventilation from natural causes, if the openings and airways are in a fair condition; still there are quite a few of the operators who persist in the old method of ventilating their mines by furnaces. Some time ago I proved by figures to one of the Peoria operators that his furnace was costing him nearly \$300 per year, and that very poor results were obtained in ventilation for that money, he finally put in a fan which cost him, when finished, about \$250. This change gave him five times more air, with only an expense of oil, and 500 pounds of slack, for the boiler furnace daily, which may be valued as akin to nothing at a coal mine where slack is a drug.

I also find good results from the daily examination of the working places and entries as prescribed by section four of the mining law.

NEW OPENINGS.

There have been 25 new openings during the past year. The most important is the Colfax Coal and Mining Co., Colfax, which is situated 22 miles north-east of Bloomington on a branch of the Illinois Central R. R. At a depth of 400 feet, 5 feet, 6 inches of a good quality of coal was reached, with a good shale roof. This coal is favorable for machine mining, it having six inches of an impure splinty coal in the bottom, and any of the mining machines could do favorable work in this under part; this part of the coal being unmarketable anyhow, will have to be left in the gobbing.

Adam Sholl has opened a new mine at Hilton, Tazewell county, on the L. E. & W. R. R. This mine is well equipped, and his intention is to put in mining machinery as soon as the mine is a little more developed.

Newsome, Brothers & Co. have opened a new slope at Mapleton, and at the Orchard Mines, Peoria county.

Burbridge & Parmely have opened a new mine at Farmington, Fulton county, on the Central Iowa Railroad.

J. M. Walters & Co. have lately re-opened the old mine at Kingston Mines, Peoria county. This is one of the oldest, important water shipping coal mines in this State. It was opened first in 1842 by a St. Louis Co. with a view of coaling their many river steamers then plying on the Illinois river. The old company also shipped considerable coal in barges to the Chicago market during the navigable season of the year, but they gave up the business in 1875, and the mine plant has been lying in ruins ever since. The new company has leased a line of small steamers and barges, and is taking coal to Chicago, and bringing lumber, salt and other freight on their return trip, thus enabling them to ship coal to that point at considerably less than railroad rates.

The Chenoa Coal & Mining Co. have lately commenced to sink a shaft one-fourth of a mile east of the town of Chenoa, in McLean county, on the T., P. & W. Railroad. Their intention is to strike the same vein that has been found at Colfax, in the same county.

The Quincy Coal Co. have almost completed sinking a coal shaft at Farmington. The mine is situated one mile north of the town of Farmington, and on the line of the Buda branch of the C., B. & Q. R. R. This favorable situation, and the fine equipment of the mine, promise to make it one of the foremost mines in the district, in point of output.

J. M. Walters & Co. and J. D. Kerr & Co. are sinking shafts at Claire, Fulton county, on the line of the Central Iowa Railroad.

MINING MACHINES.

The first introduction of mining machines in this district was at the Grape Creek Coal & Coke Co.'s No. 5 mine, Grape Creek, in 1884. They introduced the Yock mining machines, but owing to their being so cumbersome to handle, and the roof requiring to be closely propped to the room's face, it proved impracticable to operate them profitably, and made the cost of the coal produced by them as much, if not more than that mined by hand. The same company, in the same mine, introduced the Legg mining machine in 1887, but after four months experimenting, they found the same difficulty as with the Yock machine. If the roof would permit of the propping being kept back eight feet from the line of the coal face, there is no doubt that the latter mining machine would have done good work, and enabled the company to produce the coal at considerably less than by hand-mining.

The next company to introduce machines was Millard & Woolschlag, of Peoria. They are operating the Harrison mining machine, and pay three cents per square foot to the machine runner and his assistant, or something like 18 cents per ton. They get the machine-mined coal shot down, loaded, and the rooms timbered,

for 32½ cents per ton, making the machine-mined coal cost the company 50½ cents per ton, or, considering the engineer's wages, wear and tear in machines, and interest on capital, etc., it costs nearly 55 cents per ton. Compared with hand-mining prices in the past year, in the same locality, which were 75 cents in summer and 80 cents in winter, there is a material difference. There is another advantage which this company secures from mining by machine. In mining by hand, (or, as locally termed, shooting off the solid,) there is at least 25 per cent. of the softest and best of the coal shattered into fine slack, and left lying in the gobbing. The machines have reduced this loss to a minimum, or at most not more than 5 per cent. The machines have also reduced the price of powder for blasting from the average cost of 13 cents per ton for hand-mining, to 2 cents per ton, which means nearly one-seventh less powder smoke to be carried off, and which also means a healthier mine. This company has also been lately making itself felt in the Peoria market by taking important contracts to furnish coal for one year, at a figure sufficiently low to secure the contract, and yet, through the assistance of mining machines, it is able to make a profit sufficient to warrant it in taking such contracts, and, at the same time, give more constant employment to their men.

The Menard Coal Co., at Greenview, have put in the Harrison mining machine lately, and so far the operators of the machines have been working on day's wages, but the company claims, on a test of six days, that a machine cutter undermined 504 tons. The average cutter there undermines 240 square feet per shift, which costs about ten cents per ton for the cutter and shoveler. This company also claims that the shooting down and timbering costs 15 cents per ton, and that the loading of the coal costs 22 cents per ton, which in all amounts to 47 cents, not to mention the engineer's wages and interest on the investment. This, compared with the hand-mining price, which is at present 55 cents per ton for that locality, leaves a very small margin for the investment.

The height of the Greenview coal being six feet, and the advantage derived from hand-drilling machines, enable the miner to produce this coal, and yet make fair wages, at a figure that machines will find it hard to compete with.

Emerson & Co., Dumfermline, who opened out an extensive mine nearly two years ago, tested the Legg mining machines when they first opened, but laid them aside until they should have more territory opened out. In June of this year, they commenced to put the machines in operation again, but their experiment was so short that we cannot, as yet, give any definite figure as to the cost of production, compared with hand-mining in that locality, but from the outlook so far it promises to be a judicious investment.

Peoria and Fulton counties are more promising for mining-machine investment than any other counties in this district. The No. 5 seam (Geological number) in these two counties is very much

less affected by "horse-backs" and other faults which are predominant in the same seam in other counties. It has also an excellent roof, which, if little blasting powder is used, will stand with propping at least ten feet behind the line of the coal face, and very few props are required to support the roof, compared with what the same seam requires in other counties. However, the coal being so hard and strong and requiring so much powder to force it from the solid, will be a handicap on hand-mining and favor machine-mining.

The Elmwood Coal Company, of Elmwood, have lately introduced the long-wall method of operating this hard seam of coal, and the indications are that it is a better method for the operator and miner than the former system of shooting off the solid.

The amount of coal business done in this district last year was greater than during any year since the mine inspection service was inaugurated. Owing to the strikes that took place at Grape Creek and St. David, which reduced the output for the past two years, the total output was considerably less than if all had been working as usual, but the increase is general this year in all the counties in the district, with the exception of McLean.

The coal operators of Peoria, Fulton and Logan counties are trying harder every year for a share of the great North-western coal trade. Their coal may be somewhat harder and of an inferior quality, compared with the northern coal of this State, yet the favorable points are, that the operators in these counties are producing and offering it for less per ton than their northern competitors. Its being of a harder nature is a point in its favor for shipping and handling and storage, the loss being considerably less than that of finer and softer coal. Another advantage is that agents in the North-west can store quantities of this coal in the early part of the winter season before the railroads become blockaded with snow. There is no doubt that this increase in output is mostly finding its way to the North-west. The following table will give a statement as to the increase or decrease in each county as compared with 1887:

COUNTIES.	Tons for 1887	Tons for 1888	Increase.	Decrease.
Peoria.....	452,123	533,817	81,694	
Vermilion ..	359,119	499,076	139,857	
Fulton	335,215	461,589	124,774	
Menard.....	155,621	181,075	25,454	
McLean.....	141,700	117,110		24,590
Woodford..	122,445	158,500	36,055	
Logan.....	159,000	174,330	15,330	
Tazewell....	51,847	59,324	7,477	
Cass	2,325	7,300	4,975	
Total.....	1,781,395	2,192,121	435,616	24,590
Total decrease.			24,590	
Net increase.			411,026	

McLean county shows a decrease of 24,590 tons compared with the previous year; all the other counties show a total increase of 435,616 tons, minus 24,590, gives a total increase for this district of 411,026 tons over last year.

The following is a table showing the number of fatal and non-fatal accidents for the amount of coal produced; and also the number of miners and others employed, for the output:

Number of miners employed in 1887.....	3991
“ “ “ “ “ 1888.....	4420
Increase	429
Number of other employes about the mine in 1887.....	912
“ “ “ “ “ “ “ “ 1888.....	830
Decrease.....	82

Number of tons produced for every fatal accident this year, 221,911.

Number of tons produced for every non-fatal accident, this year, 55,477.

STRIKES.

There have been only two strikes in this district during the last year. The first was by the miners employed by the McLean County Coal Company, at Bloomington. The company having discharged a few of their employes for taking a leading part in forming a Union, the miners, as a body, came out on a strike to have those who had been discharged reinstated. After a three weeks' parley, the company having succeeded in getting other miners, the old miners returned to work. The other was a four weeks' strike which was begun about the first of June by the miners in the employ of the Cuba and Canton Coal Mining Company, at Canton. The operators insisted upon reducing the price for mining five cents per ton, to bring the price to the same basis as paid at their mine at Cuba. Subsequently, the company consented to restore the former price, and the miners then resumed work. The relation between operators and miners has been more amicable this year than has been the case for two years previous.

FATAL ACCIDENTS.

The number of fatal accidents for this year is considerably greater than during former years. Three of these fatal accidents have occurred to parties who were not directly producing coal. Robert R. Reid of Lincoln was working in a clay vein; Robert R. Young of Fairmont was employed as a top-man at a sinking shaft; and Oliver Hulick of Canton was employed as a coal trimmer. Following are the tables of casualties:

Fatal Casualties in the Third District.

Date.	Name.	Age	Residence.	Married	Single	Children	Cause of Accident.
1887.							
July 21	Baker, William	38	Grape Creek	1	1	1	Crushed by falling rock in entry

FOURTH DISTRICT.

MR. JOHN S. LORD,

Secretary of the Bureau of Labor Statistics, Springfield, Ill.

SIR: In accordance with section twelve of the mining law of the State, defining the duties of the inspectors of mines, I herewith submit my annual report for the year ending July 1, 1888.

The following report gives the usual tabulated statements, showing the number of collieries, shipping and local; the number of new mines and of abandoned mines; the number of miners and other employés, and boys employed during the summer and winter months; the number of days worked at each mine, with an average for each county, and for the whole district; the price of mining and the value of coal at the mines, with the average prices and values for each county and for the district; the total tonnage for each county and for the district; also the number of mining machines, and the number of employés operating them, with the tonnage of the machines in each county and for the district; the quantity of blasting powder used and a total valuation of the coal at the mine for each county and for the entire district. A record is also made of all fatal and non-fatal accidents, with particulars relating to the same.

The following summaries are presented for the district for the year:

Total number of mines.....	108
Shipping mines.....	57
Local mines.....	51
New mines.....	8
Abandoned mines.....	10
Number of employés—miners.....	4,027
Number of other employés in and about the mines.....	1,059
Number of boys employed in and about the mines.....	129
Total number of employés.....	5,215
Average number of working days for the district.....	216
Total number of kegs of powder used in the district....	54,310
Average price for mining for the district in summer....	\$0 57.9

Average price for mining for the district in winter.....	\$0.61
Number of tons of coal produced.....	2,854.54
Average value of coal at the mine for the district.....	\$0.91
Aggregate value of total product.....	\$2,703.35
Number of coal mining machines(Harrison).....	
Number of coal mining machines(Legg).....	

Total number of machines.....	
Output in tons by machines.....	1,112.00
Number of employes operating the machines.....	129

CASUALTIES.

Of the eight fatal accidents six of them occurred in the mines of the Consolidated Coal Company of St. Louis, during the months when mining was extensively conducted, and the output the largest. Such a fatality in so short a space of time induced the General Manager, Mr. J. C. Simpson to adopt a set of rules and regulations for the better discipline of the employes in and around the mines, and with a view to reducing the accidents as far as possible. The mine inspectors of the Fourth and Fifth Districts were invited to a conference at the general office in St. Louis, to assist in drafting these rules, so that they should in no way

conflict with the mining laws of this State. After consultation Mr. Simpson had the following rules printed and posted at all the company's mines:

RULES AND REGULATIONS FOR THE GOVERNMENT OF EMPLOYEES IN AND ABOUT THE MINES OF THE CONSOLIDATED COAL COMPANY OF ST. LOUIS.

ALL EMPLOYEES.

"All boys must produce an affidavit from their parents or guardians, sworn and subscribed to before a notary public or justice of the peace, that they are fourteen years of age, before they shall be permitted to enter any mine to work therein.

"Employés are instructed to use all possible precaution in the exercise of their duties, to promptly report to the timberman or mine manager any unsafe places which they may see, whether in their own rooms or in any of the entries of the mine.

"No person shall ride upon a loaded cage, nor one containing an empty car, tools, timber or material. In no case shall more than . . . persons ride on any cage at any one time, nor shall any coal be hoisted while persons are descending into the mine.

"No employé shall enter any mine in the morning until he has had a report from the proper timberman, that the mine is safe. Should the working place of any workman become unsafe, it shall be his duty to discontinue working in it, and to notify the mine manager.

"All persons are hereby forbidden to enter any of the old workings, without the consent of the mine manager or his assistant.

"Any person found guilty of carelessly or wickedly injuring animals or other property, shall be held liable for the full amount of damage done to the same.

"All persons must familiarize themselves with these rules and regulations, and any person violating them will be dealt with as the division superintendent or mine manager may direct.

MINE MANAGER.

"It shall be the duty of the mine manager to carry out and enforce the observance of the mining laws of Illinois, these rules and regulations, and all necessary precautions for the safety of employés.

"He shall engage the services of all employés, instruct them as to their duties, and appoint none to positions requiring skill or involving responsibility, except such as are found, after due investigation, to be competent and reliable.

"He shall keep constantly on hand a sufficient supply of timber, and so situate it as to be convenient to supply the demands of the workmen.

"He shall examine a portion of the workings daily, and inspect, specially, any part of the mine, shaft or machinery reported unsafe or requiring his attention. It shall also be his duty to measure the air currents, once a week, at the foot of the downcast, upcast, and near the face of the working places, and at all splits, giving totals in cubic feet per minute, and report the same, monthly, to the division superintendent."

ENGINEER.

"It shall be the duty of the engineer to examine daily, and watch carefully, the machinery, pumps, boilers, ventilating fans, ropes, head-sheaves, safety catches, etc., and report any defect to the mine manager or outside foreman.

"He shall see that the steam pressure does not exceed the limit designated by the boiler inspector, and shall order or keep the fan running at such speed as the mine manager may direct.

"He shall work his engine slowly when persons are ascending or descending the shaft, and shall not engage in conversation when in the act of lowering or hoisting men or coal. He shall not leave the hoisting engine at any time, without first placing the reversing lever on the center, and applying the brake

"It shall also be his duty to prohibit loafing in the engine or boiler houses.

"The fireman shall act under the instructions of the engineer.

TOP-MAN.

"It shall be the daily duty of the top-man to carefully examine the cages, and their connections with the hoisting ropes, the cage-rests, safety-gates, and cage-guides above ground, and promptly report any defect to the mine manager.

"The lowering of workmen into, and hoisting them out of the mine, morning and evening, shall be conducted above ground, under his supervision, and, for that purpose, he will attend, thirty minutes before the hoisting of coal begins, and an equal time after it ends.

"He shall not permit more than . . . men to descend at one time, nor tools, timber nor material to be taken upon the cage with them.

BOTTOM-MAN.

■ "The lowering and hoisting of workmen shall be conducted, below ground, under his supervision, and, for that purpose, he will attend, thirty minutes before the hoisting of coal begins, and remain after it ends, until all of his shift have ascended. It shall be the duty of the bottom-man to conduct all signalling, to allow no one to go upon the cage until he has received the return signal

from the engineer, to restrict the number ascending upon each cage to not more than...men, and to see that neither tools, timber nor material are taken upon the cage with men.

"It is also his duty to see that pit-cars are so loaded that coal will not fall off during the hoisting, or landing on the cage-rests; that the pit-cars are properly secured before the signal to hoist is given, and that workmen shall not cross from one side of the shaft to the other through the hoist ways.

DRIVER BOSS.

"It shall be the duty of the driver boss to see that the drivers are at the stables, and ready to begin work at the appointed time. He shall not allow the mules to be brought out of the stables until all employes have passed away from the shaft towards their various working places. He shall prohibit trapper boys leaving their doors during working hours, or running in front of loaded or empty runs. He shall see that the mules are properly attended to, regularly fed and watered, and not over-driven, whipped or abused.

BLASTERS OR SHOOTERS.

"Are required to use copper needles in preparing blasts, and not less than five inches of copper on the ends of all tamping bars used for tamping blasts. The use of iron needles and iron tamping bars not tipped with five inches of copper is hereby forbidden. It shall be the duty of the blaster or shooter to take proper care of his powder from the time he receives it until used. He shall store the same at a central point, in a box provided with a pad-lock, and placed at a safe distance from the hauling or travelling road. At every shot, he shall guard the approaches thereto, so that no one may come upon it unawares, and before firing a shot in a cross-cut, between rooms or entries, shall give timely notice, so that any person in the room or entry toward which the cross-cut is being driven, may seek a place of safety.

Blasters or shooters are cautioned against returning to a blast without examining the roof, or returning with undue haste to one which is supposed to have missed fire. A hole which has missed fire must not be drilled out, but a new one must be drilled at a safe distance therefrom.

"Powder must be handled and cartridges prepared with great care, and smoking must not be indulged in while the same is being done. The lamp must be removed to such a distance that the powder cannot be ignited by a spark therefrom."

ENGINEER, TOP-MAN AND BOTTOM-MAN.

"The following code of signals between the top-man, bottom-man and engineer are prescribed for use at all mines:

FROM THE BOTTOM TO THE TOP.

"One bell shall signify to hoist coal or empty cage, and also to stop either when in motion. Two bells shall signify to lower cage. Three bells shall signify that men are coming up. When return signal is received from the engineer, men will get on the cage, and ring one bell to start. Four bells shall signify to hoist slowly, implying danger.

FROM THE TOP TO THE BOTTOM.

"One bell shall signify, all ready, get on the cage. Two bells shall signify to send away empty cage.

TIMBERMAN.

"Shall carefully inspect all rooms and entries in the portion of the mine under his charge, and ascertain that there are no dangerous accumulations of gas, lack of proper ventilation, obstructions to roadways, unsafe roof, nor other dangerous conditions, and report the result to the workmen before allowing them to enter the portion of the mine affected thereby. It shall also be his duty to take down any loose slate or coal that may be found, and to promptly secure any dangerous places which may be reported to him. It shall also be his duty to make a daily record of the condition of the mine, in a book kept for that purpose.

MACHINE RUNNER.

"Will carefully examine any place he may have to cut, before commencing work, and ascertain that the roof is secure and that no loose coal is hanging. He will repeat his examination as his work progresses, and in the event of danger arising, will immediately discontinue work, and report the facts to the timberman or mine manager. The machine helper will act under the direction of the machine runner.

DRILLER.

"Will exercise the same precautions as the machine runner. The driller's helper will act under the instructions of the driller.

LOADERS.

"Will examine the roof, and face of coal, before commencing work, in each room or entry, and during the progress of their work. In the event of the same being unsafe, or becoming unsafe, they will at once cease work, and notify the timberman or mine manager; in cleaning up a room, they must remove all loose coal before leaving it.

"It is the duty of the loader to clean the coal thoroughly, and trim the pit-cars so that the coal will not fall off in transit through the mine or in the shaft.

HAND-MINERS.

"It shall be the duty of every miner employed in the mine to examine the roof or other overhanging slate, rock, or top coal in his working place, as soon as he shall enter the same in the morning. If found unsafe, he shall immediately take down or prop up the loose material, and see that it is in safe condition to work under before commencing work.

"It shall be the duty of the miner to see that the roadway in his working place is kept clear, for the mule to pass in to haul out the coal, and that the props are so set that there will be room for any person to stand between the cars and the props; he is required to use copper needles in preparing blasts, and not less than five inches of copper on the end of all tamping bars used for tamping purposes in blasting. The use of iron needles and iron tamping bars not tipped with five inches of copper is hereby forbidden.

"He shall see that all fire is extinguished, after blasts, and shall not leave his working place in an unsafe condition when his day's work is done. Should a sufficient supply of timber not be at hand at any time, to enable him to secure his place, he is hereby instructed to immediately discontinue working in it until the same has been furnished, and notify the mine manager.

"If the mine manager or his assistants shall order bad roof to be secured with props or taken down, it shall be the duty of the miner to attend to the same, without unnecessary delay.

"When driving an entrance between two rooms or entries, it shall be the duty of the miner to give timely notice to any persons in the place toward which he is driving, so that they may find a place of safety; he shall also guard the passages on either side of his place, at every shot, when about to fire, so that no person may come unawares upon it.

"When a shot has been fired, he shall wait until the powder smoke has cleared sufficiently to allow him to carefully examine the roof and coal, and ascertain that the same is safe before resuming work; he shall be careful not to return too soon to a shot which is supposed to have missed fire. A hole which has missed fire must not be drilled out, but a new one must be drilled at a safe distance therefrom.

"It shall be the duty of the miner to take proper care of his powder, from the time it leaves the powder house until it reaches his working place in the mine, at which place he shall keep it in a box placed well back from the hauling or travelling roads, and place a cover over it when not present, and see that at all times proper care is taken of it. When any miner shall find any place in an unsafe condition—either the hauling roads, doors, overcasts, cages, safety-catches—or any fire in the mine, he shall report the same at once to the mine manager or his assistants."

These rules and regulations have been posted at each colliery—one copy at the office, one copy at the lower landing, and one copy

at the upper landing, with the Signal Code in larger print posted at the bottom of the shaft, top of shaft, and one copy in the engine house.

The following rules have been posted in the engine and boiler rooms:

RULES.

"For the Government of Engineers and Firemen in charge of Steam Boilers owned and operated by the Consolidated Coal Company of St. Louis.

"1. When commencing a shift or starting the fires in the furnaces, ascertain, personally, the level of water in boiler, and if found sufficiently high, proceed with the raising of steam. If, at any time, water is not found at the lower gauge, draw the fire at once, and allow the boiler to cool off before filling with cold water; do not lift the safety valves, or suddenly open any of the steam outlets, under these circumstances.

"2. Keep the water in the boiler at a uniform height, and ascertain this frequently by trying the gauges and examining the water glass. Feed steadily and regularly, if possible, with hot or warm water. If the water foams the engineer should close the throttle valve, for a short time, until it ceases.

"3. Fire regularly and lightly. Keep the fire well back from the doors, in order to prevent burning of liners. Clean the fires when necessary, and immediately cool the hot ashes and cinders so as to prevent burning and warping of fronts. Keep the fire doors closed as much as possible, and check the fire with the damper or bottom doors when necessary.

"4. The boiler, inside and outside, with its flues, tubes, fronts, breeching, stack, connections, etc., are to be kept clean; when the water contains sediment or forms scale, the boiler must be blown off, and these removed as often as is necessary; soot must be removed from the boiler shell, and from the flues, tubes, breeching, etc., and the furnaces kept free from all accumulation of ashes, etc.; fronts are to be wiped with oily cotton waste, and kept clean; gauge cocks, water glasses, pressure gauge, etc., are to be kept bright.

"5. Gauge cocks and water glasses must be kept clear and not allowed to stop up under any circumstances; raise the safety valve, cautiously and frequently, in order to ascertain that they are working freely, and have not become fast in their seats. It is the duty of the boiler inspector to adjust the weights on the safety valve, and the engineer or fireman must not change the same or add to it; when the steam is blowing off, comparison should be made with the steam gauge, and if a difference exists, the fact must be immediately reported to the division superintendent or mine manager.

"6. Leaks, at any time, of the joints, must not be permitted to continue for a longer time than is necessary to arrange for their repair; all leaks and blisters must be reported at once to the division superintendent or mine manager, whose duty it is to arrange for their immediate repair.

"7. This company has arranged for the semi-annual inspection, by competent boiler inspectors, of all steam boilers owned and operated by it, and if such inspection is overdue or not thoroughly made, the engineer is hereby instructed to so report to the mine manager or division superintendent.

"8. Every boiler should be blown off and opened at regular weekly, semi-monthly or monthly intervals, as the conditions may require, and the inside carefully examined.

"9. Boiler rooms must be kept neat and clean, and no person allowed therein except such as are called there in the discharge of duty."

MINING MACHINES.

There are eleven collieries in the district operated by coal cutting machinery, eight of them owned by the Consolidated Coal Company of St. Louis: Abbey Mine No. 3, Heintz Bluff Mine, and Troy Mine are situated on the line of the Terre Haute and St. Louis Railroad; No. 6, No. 7 and No. 8 collieries on the line of the Wabash Railway; the Gillespie and St. Barnards Shafts on the line of the Indianapolis and St. Louis Railroad. Pana Colliery No. 1 owned by the Pana Coal Company, located at the intersection of the Indianapolis and St. Louis, the Illinois Central and the Ohio and Mississippi Railroads; coal is shipped direct from this mine on all three roads. The Wilmington and Springfield colliery is located on the Chicago and Alton Railroad, near Springfield. The Illinois Fuel Company is located on the Springfield Branch of the Illinois Central Railroad, about two miles north of Riverton.

The coal seams Nos. 5, 6 and 7 in the Fourth District are very well situated for the use of mining machines, having a good roof, and fire clay. Mining machines have been introduced into four of the largest mines, during the year—Nos. 6 and 8, owned by the Consolidated Coal Company: the Wilmington and Springfield Coal Company, and the Illinois Fuel Company. As mining progresses and new shafts are opened, more machines will be introduced, as the coal can be mined much cheaper by the machines, and brought out in better condition for the market; more lump coal is produced and the coal is in better condition to withstand transportation and storage, as less powder is used to bring down the coal with machine-mining than by hand-mining. In machine-mining, the working places are generally in a better condition as regards safety and ventilation, as compressed air is carried up to the face of the working places as a motive power for the machines, and exhausting into the air, keeps these places in a healthy condition; blasting is mostly done at night, or after the machine men have done their work in undermining the coal; and where the various branches of labor in machine-mining are properly systematized, it is never necessary to have men working in powder smoke. In each branch of labor in machine-mining, each man becomes skilled in the department to which he is assigned; consequently, timbering, track-

laying and blasting are done in a safer and more systematic manner; less timber is used, and the hauling-roads, rooms and entries kept in a safer condition, as each timberman is responsible for the safety of his district. The older miners do not take kindly to the machines, and they cannot, perhaps, be blamed for it, as it takes young and strong men to run the machines and load the coal. The only places for the older miners, in a machine gang, is timbering and blasting, and as it requires only one timberman and one blaster for each machine, out of a gang of eleven or twelve men, there is not much room for the old miner. Large numbers of old miners have gone to other districts where machines are not used, and as it does not require so many men to produce the same quantity of coal, with the machines, as where mining is done by hand, fewer men will be required.

The system of paying men by the day, where coal cutting machines are used, is universally adopted in this district, and seems to give general satisfaction to both operators and men; no trouble of any kind has occurred since the machines were introduced and the daily-wages established.

The general tendency in the district will be, that as new mines are opened, machine-mining will be adopted; a number of our older mines are driven a long way from the bottom of the shaft, and the outside works are not well arranged for the location of machine-mining, or machines would probably have been put in before this. As time progresses, the system of mining in the larger seams of coal in this district will be entirely changed from hand to machine mining.

The late amendments to the Mining law are generally concurred in by the operators. Boys are required to furnish affidavits to the mine manager, the code of signals as set forth in the law have generally been adopted, with top-man and bottom-man to see the men on and off the cage, with suitable lights at top and bottom of the shaft, where required.

IMPROVEMENTS.

Various improvements have been made in and around the mines, during the year; the Consolidated Coal Company of St. Louis have made some extensive improvements, and have others in contemplation. At the Mount Olive mines, a "Guibal" fan, thirty feet in diameter and nine feet wide, has been erected, to be used for the ventilation of three shafts—Nos. 8, 9 and 10; "Cherry's" automatic dump cage, and "Ramsey's" coal distributor have been put in at No. 10; a "Roots" blower has been erected at No. 8 for the purpose of blowing away the dead slack after it passes through the screens in the elevator. A number of improvements have been made in the underground works at Nos. 8, 9 and 10; very substantial overcasts of rock masonry have been put in No. 8; all advantages have been taken, in splitting the air, to reduce the friction to a minimum, and carry the air well up to the working places in all these

mines; a large reservoir has been made, during the year, at No. 1 so that there will be no scarcity of water in the future. This company has put in electric signals at all of its larger mines, from bottom of the shaft to the top, with return signal from top to the bottom; also, a signal from the top of the shaft into the engine house. A fan, twenty feet in diameter, of the "Guibal" pattern has been erected at No. 6 shaft, Staunton. The work on the two fans—the one at Staunton and the one at Mount Olive—has been done in a very substantial manner; water gauges have been put up on the fan drift, and proper places selected in the mine for measuring the air currents.

New hoisting engines have been put in at No. 7, Staunton; they are the coupled engines 18x32, Litchfield make, with new drum and top sheaves; the sheaves are of the Litchfield pattern, wrought iron spokes and steel shaft. New hoisting engines (same size and make as at Staunton) have also been put in at this company's mine at Carlenville; new boilers have also been put in, and a new brick engine and boiler-house has been built; the engines are located at the end of the shaft, as coal is dumped on both sides of the shaft. A large fan is to be erected. This company is also putting in a "Guibal" fan, 20 feet in diameter, at the Gillespie shaft, and making a large reservoir for water storage.

A new haulage plant has been erected in the underground works of the Riverton Coal Co., Sangamon county. It is on the tail-rop principle, pulling the coal a distance of 1800 feet, and hauling twenty cars at each trip, and is working very successfully.

The new escapement shaft at Chatham has been completed during the year.

A new and improved elevator and screening-plant has been put in at the Girard Coal Co.'s shaft.

NEW MINES.

A new shaft has been sunk by the Consolidated Coal and Coke Company of Mount Olive. The shaft is located on the St. Louis and Chicago Railway, one mile north-east of the village of Mount Olive, Macoupin county. The shaft is sunk down to a depth of 440 feet; the coal is from 7 to 8 feet thick, and of good quality, with a good roof. Operations to hoist coal were commenced January 1st, 1888, and the mine has been opened out very rapidly. The outside plant is put up in very good shape, consisting of a good brick engine and boiler-house, with substantial head framing, elevator, screens, etc. A Litchfield hoisting plant and boilers have been put in. It is the intention of this company to sink another hoisting shaft, and connect the two, to be used as an escapement shaft.

The new shaft of the Pana Coal Company has been finished during the year, and entries are now being driven to connect the two shafts for escapement. A very substantial plant has been erected, engines coupled 20x40, mine cars holding a gross weight of 5300 lbs. each; the shaft will be known as No. 2 mine.

The coal is about the same thickness as in No. 1 shaft, and of a very good quality. The two mines are about one mile apart. No. 1 is located between the Indianapolis and St. Louis Railroad, and the Ohio and Mississippi, and at the point where these roads cross the Illinois Central; the new shaft No. 2 is located on the Illinois Central, about one mile north of the Union Depot at Pana.

A new shaft has been sunk by the Hillsboro Coal Company, and is located on the Indianapolis and St. Louis Railroad, about one mile east of the depot at Hillsboro. The shaft is 450 feet deep, and is sunk on No. 6 seam, from 7 to 8 feet in thickness, and equal in quality to the Mount Olive coal.

A new shaft has been sunk by the Edinburg Coal Company, and is located on the Ohio and Mississippi Railroad, adjoining the west end of the village of Edinburg. The coal is about 7 feet in thickness. A small shaft was sunk for the purpose of prospecting, and coal having been found, the company is now sinking a larger shaft for hoisting purposes. The smaller opening will be used as an escapement shaft.

A new shaft has been sunk by the Central Coal Company, and is located on the Wabash Railway, in South Springfield, near the intersection of the Chicago and Alton Railroad. The shaft went down on the usual No. 5 coal, at a depth of 250 feet. The coal is of a good quality, with a very good roof, and the plant is, in every respect, good.

The Capital Co-operative Coal Company, of Springfield, has sunk a new shaft, which is located on the Ohio and Mississippi Railroad near the junction of the Springfield branch of the Illinois Central, about one-quarter of a mile south of their old shaft. The coal is No. 5; depth of shaft, 250 feet. The company connected the new shaft with the old one for escapement, and is at present hoisting coal from both shafts.

A new shaft has been sunk by Ellis Briggs, adjoining the Chicago and Alton Railroad, within the corporate limits of the village of Roodhouse. The shaft is down 87 feet, sunk on No. 1 coal. The coal has an average thickness of 2 ft., 4 in.; and two small coupled engines have been put in, with suitable top works.

A new shaft has been opened by Thos. Crowlan, at North Alton, sunk to No. 1 coal, at a depth of 90 feet. Horse power is used to hoist the coal.

ABANDONED MINES.

The Mattoon shaft was abandoned, and everything around the mine sold, January 14th, 1888. This shaft was sunk to No. 2 coal, at a depth of 904 feet to the top of the coal. The coal is 3 ft., 6 in. in thickness, was mined on the long-wall plan, and was worked very successfully; but owing to having such a large quantity of water to contend with, and larger seams of coal to compete against, the management could not keep it running any longer. It is said

that over \$100,000 was spent in sinking this shaft. The management of the underground works, at the time of abandonment, was under Samuel Ainsworth, who is at present sinking the Taylorville shaft, and who furnished a plat of the mine when abandoned. The said plat was filed in the circuit clerk's office, at Charleston, Coles county. The company sunk a new shaft down to a depth of about 300 feet, intended to be used as an escapement; this shaft is still standing in good shape, but the engines, boilers, etc., at the old shaft have been sold, and have been removed to a mine near De Quoin, Ill.

The Consolidated Coal Company of St. Louis abandoned the Anchor Mine, near Mount Olive, and the Confidence Mine, near Collinsville, during the year; and Carlinville No. 1 will be used as an escapement shaft.

Two small mines at North Alton have been abandoned during the year—the Baker Bros. (horse power) and John Pearce's slope.

One small mine has been abandoned at Bethalto—Peter Meyer (horse power.)

A small mine operated by Wm. Parker, two miles south-west of Jacksonville, (horse power) has also been given up.

A drift operated by John Stewart, in Scott county, near Winchester, has been worked out and abandoned.

A drift at Fancher, Shelby county, operated by Andy Wade has been worked out and abandoned.

NEW SHAFTS BEING SUNK.

The Taylorville Coal Company is sinking a new shaft at Taylorville, located at the intersection of the Wabash Railway and the Ohio and Mississippi Railroad; the shaft is proving a very expensive undertaking, as large bodies of water and quicksand have been encountered; the opening is now down about 200 feet with most of the water puddled back; 12x12 timbers are used for the outside curbing, with an 8-inch puddle wall, and 10-inch timbers inside. It is the intention of the company to make this one of the best shafts in the State. The coal has been proved by the diamond drill, and is about 7 feet thick, at a depth of 450 feet.

A new shaft is being sunk by the Kitchell-Penwall Coal Company, at Pana, Christian county, which is now down about 25 feet, being very substantially curbed with 12x12 timbers. The shaft will strike No. 6 seam, the Pana coal running about 7 feet in thickness. The shaft will be in the neighborhood of 750 feet in depth, and it is the intention of the company to make the plant first class in every respect. The shaft is sunk of very large size for the purpose of hoisting a mine car holding two tons of net lump coal. A pair of large coupled engines will be erected (24x48) from special designs, by H. H. Beach, mechanical engineer. The engines, boilers, cages, head sheaves, balanced dumps, etc., will be manufactured at the Litchfield Car and Machine Works. The engines will be the largest in the State. The sinking is progressing very fast. Ingersoll percussion drills, worked by

compressed air, are used in drilling the holes in the sinking shaft. This shaft is located on the Illinois Central Railroad, about one-quarter of a mile south of the Union Depot at Pana.

The Coffeen Coal Co. is sinking a new shaft at Coffeen, Montgomery county, on the St. Louis, Kansas City and Toledo Railroad; the company expects to get the Hillsboro coal at a depth of 500 feet.

The Assumption Coal Co. is sinking a new shaft at Assumption, Christian county, on the Illinois Central Railroad; the shaft is now down about 250 feet; the company expects to get the Pana coal.

A new shaft has been sunk at Charleston, Coles county. By borings made some years ago, it was said a paying seam of coal would be found at a depth of 450 feet; the shaft was sunk by James P. Cummings to that point, but coal in paying quantity has not been found. The sinking is now stopped, and the sinking plant for sale.

The relations between operators and miners have generally been very pleasant, during the year. A stoppage of about two months' operation occurred at the beginning of the fiscal year, as regards the district price, but was finally settled by the officers of the miners' Protective Association in Sangamon county.

The output shows a gain of 286,249 tons over the year 1887. The coal trade was very brisk in the district during the winter months, and the selling price very satisfactory to the operators. Since the organization of the Consolidated Coal Company of St. Louis, a paying selling price has been better maintained and kept uniform during both the summer and winter months in the St. Louis market.

Macoupin county shows a gain of 90,036 tons over last year,—setting back, more nearly, to her usual standard, the output being 616,624 tons. Madison county has a slight falling off from last year, and it seems she is not likely to get back to her old time standard, as five of her largest mines, owned by the Consolidated Coal Company, have not been operated during the year, viz: the Collinsville, Lumaghi, Canteen, Worden No. 11, and McDonald shaft at Worden. Macon county shows a large gain—162,622 tons,—mainly in the City Coal Co.'s shaft at Niantic. Sangamon county maintains her usual standard, giving 764,970 tons for the year. The outlook is for a larger output in the three large mining counties of the district—Madison, Macoupin and Sangamon—as new mines have been opened in Sangamon, and improved machinery and facilities for handling the coal, in the other counties, will improve their output. The older mines are being abandoned, and the newer ones worked in a more thorough and systematic manner,—everything being done with a better system of mining, with a view of a larger output, the coal-mining plant being more centralized, so that larger quantities can be hoisted out of one shaft.

Respectfully Submitted,

WALTON RUTLEDGE,

Mine Inspector 4th District, Alton, Ill.

Jersey County—Fourth District—1888.

FIFTH DISTRICT.

MR. JOHN S. LORD,

Secretary of the Bureau of Labor Statistics, Springfield, Ill

SIR:—In conformity with Section 12 of an act of the General Assembly, providing for the safety of persons employed in coal mines, in force July 1, 1883, I herewith submit the fifth annual report for the Fifth District.

The present report contains tabular statements for each county, giving the number of tons of coal mined with machinery; the number and patent of mining machines in use, with the various kinds of labor necessary to operate the same, and the prices paid per ton, per foot and per day; the number of hand-miners and other employes; the number of boys over fourteen years of age engaged in the mining industry of the district; the output of coal in tons at each mine; the number of kegs of powder used, and the number of days worked, with the aggregate value of the total product at the mines, and a record of the fatal and non-fatal accidents.

There are 151 mines in the district, 103 of which are shipping mines and 45 confined to the local trade, employing altogether 5,410 men and 127 boys in and about the mines.

The total output of coal is 2,637,546 tons—1,029,924, or 39 per cent. of which, has been produced by mining machines and day labor. In the production of the total output 46,733 kegs of powder were consumed.

MACHINE-MINING.

On account of the abundance of coal, and its proximity to the surface, competition has become so keen as to necessitate the study of rigid economy in its production in order to enable the operators to put the coal on the market at the present low prices. With a view to this, mining machines have been, and are being, introduced into the larger mines, so as to furnish adequate means of producing cheap coal.

There are in the district 17 machine-mines, with 18 air-compressors, 98 mining machines, 36 air-drills, and about 67 patent hand-drills, employing, altogether, 1,354 men, as cutters, helpers, blasters, timbermen, loaders, etc., receiving wages, varying from \$1.25 to \$2.50 per day; or 4½c, 4½c and 5c per foot for cutters; ½c, 3½c and 3½c per foot for machine helpers; 11c, 11½c and 13c per ton for loading the coal.

Since the introduction of machine-mining a better system of working has been established, and a demand thus created for skilled machinists, cutters, blasters, timbermen, etc., and a stricter supervision of the work has been provided for. One of the most notable advantages of this system is the permanent improvements which have been effected in timbering the working places by men who are trained to this especial work. It is their duty to carefully inspect that portion of the mine under their charge, and to secure all unsafe roof; also to ascertain the condition of rooms and entries before allowing other workmen to enter.

While going through these mines I have observed that the props are more judiciously placed, and in such a manner as to impress one with the idea that the timbermen fully understand the responsibility of their positions, and also the principles of timbering, which knowledge is the result of experience and observation.

When a miner has charge of a room, and is being paid by the bushel, it often happens that he becomes so intent on getting out a certain amount of coal that he neglects to prop his place until he has finished loading a car, drilling a hole or throwing back slack; and such a delay on the part of the miner too often results in his death. When we take into consideration the accidents resulting from negligence on the part of the miner, we can readily see the advantages to be derived from training a special set of men to take charge of the timbering, holding them responsible for the security of the working places. There is no doubt that, under this system, accidents from falling coal and roof will be greatly reduced.

The men employed exclusively for blasting are the most experienced miners that can be found. It is their duty to handle all powder brought into the mine, make cartridges and fire the shots. These men become experts as blasters, gauging the shots with such precision as to obtain the very best results with a given quantity of powder, thereby securing economy in time, coal, and powder. The danger which accompanies the handling of explosives is also diminished by this method, because the powder is entrusted to fewer men, and to those only who understand both the uses and dangers of it.

The drillers are furnished with air-drills, or patent hand-drills, with which they are expected to drill a certain number of holes of a given depth during the day. The common way of drilling

holes is by the "churn" drill, by which it is practically impossible to drill a round hole. Generally a three cornered hole is made which is very objectionable, because if the hole is perfectly round it will present a uniform surface to the pressure, retaining the blast until its force is fully developed. With a three cornered hole the pressure on the sides is concentrated at the corners which, being required to resist more than their share of the pressure, give way, permitting the explosive gases to escape before the force is fully developed, and thus produce only a large amount of smoke.

By the introduction of hand-drilling machines a cheaper and better hole has been secured. The hole being perfectly round requires less powder, as it retains the explosive gases until their power is fully developed.

NEW MINES.

New mines have been opened and put in operation during the year, as follows: Brandenberger Bros., Belleville; Oakland Mining Co., Belleville; Daniel Marsh & Son, Belleville; Lill & Schinide, Belleville; Dickison & Jones, Belleville; Crown Coal Co. No. 1, near Belleville; Madox & Son, Belleville; Tilden Mining Co., Tilden; New Enterprise Coal Co., Marissa; Consumers Coal Co. Caseyville; New Athens Coal Co., New Athens; James Lemont, Centerville Station; Robert Brennan, Caseyville; St. Louis Ore & Steel Co. No. 5, shaft, machine mine, Murphysboro; Future Mining Co., Breese; Griffin & Nickles, Carterville; A. Burgan, Stoneford; Dean & Hopper, Percy; Big Muddy Coal & Coke Co., shaft No. 2, DeSoto; Miller, French & Ranch, Lenzburg; J. L. Weir & Son, Sparta; Roseborough & Moffat, shaft No. 2, Percy.

All the above mines, with the exception of those of A. Burgan, Stoneford, and Roseborough & Moffat, Percy, are working a seam of coal varying from 7 to 9 feet in thickness.

The following new mines have been opened and are preparing to hoist coal: Jupiter Mining Co., DuQuoin; Superior Mining Co., DuQuoin; Henry Horn, Esq., DuQuoin; G. W. Brown, Esq., Pinckneyville.

Elkville Coal Co.'s mine, owned by Halliday Bros., and located at Elkville, Jackson county, will be operated entirely with the Legg mining machine, workmen being paid by the day.

New shafts for hoisting purposes are being sunk as follows: Joseph Taylor, Ridge Prairie; Charles Donow & Bros., O'Fallon; John Yock, Belleville; Edward Aband, Belleville; Crown Coal Co. No. 2, Belleville; Harry Taylor, Belleville; Isaac Jonston, Marissa; Thomas Davis, French Village; Fred Murphy, Belleville; Bruggeman & Hortman, Belleville; A. C. Wiley, Sparta.

The following abandoned mines have been reopened during the year: Freeburgh Coal Co.'s mine, Freeburgh; Union Mines, Caseyville; Winning & McMath, Carterville.

Two of the above companies have erected new head-frames, sunk escapement shafts, and are making other improvements in and about the mines.

Air shafts are being sunk as follows: Consumers' Coal Co., Caseyville; Brandenberger, Belleville; Dickinson & Jones, Belleville; Fred Murphy, Belleville.

From the above it will be observed that there have been 23 new shafts sunk and put in operation, and three abandoned mines reopened during the year, 19 of which are "shipping mines," and all accessible to St. Louis. There are, in addition to these, six other new mines almost ready for operation, and eleven in process of sinking, near to the same market, and destined to compete for, and to share, in some measure, the business of that market. At no previous period, probably, has the price of coal been lower, nor has there ever been greater development of close economy in the working of coal than in the year just ended.

IMPROVEMENTS.

At Shaft No. 4, of the St. Louis Ore & Steel Co., at Murphysboro, a new head-frame has been erected, two Cherry automatic dumping cages put in, and an entire new outfit of mine cars purchased, at a cost of \$5,000. Shaft No. 5, belonging to the same company, is a new machine mine, having been equipped with the latest improved machinery. There are four new cylinder boilers, 39"x30'; double engine, 12"x24"; one Ramsey box-car loader, and two Cherry automatic dumping cages. The method of working this mine is by the three-entry system, the splits being so arranged that as soon as the new fan is erected there will be an abundance of ventilation. At present they are ventilating by a steam jet.

Two new fans have been built by the Gartside Coal Co. at their shafts No. 1 and 4, at Murphysboro, which have greatly improved the ventilation.

The White Oak mine, operated by the Consolidated Coal Co., has been fitted with two new 34"x30' cylinder boilers, new ropes, one Blake air-compressor, and the fan has been remodeled.

The Crystal Plate Glass Co., at Fredonia, have greatly improved the sanitary condition of their mine by sinking an air shaft and erecting a 12-foot fan over it. They have also put in two new boilers and one Ramsey box-car loader.

By adopting a better system of conducting the air to the working faces, and sinking a new air shaft, the Carterville Coal Co., of Carterville, have greatly improved their mine.

The Enterprise Coal Co. and the DuQuoin Mining Co., of DuQuoin, have erected new fans at their mines, which are giving excellent results.

The Odin Mining Co., at Odin, and the Future Mining Co., of Breese, have put up new fans at their mines.

Various improvements have been made by the Carbondale Coal and Coke Co., Murphysboro, such as retimbering the shaft, putting new ladders in the escapement, erecting a 12-foot fan, and splitting the air currents. Lumber is now on the ground for new head-frame.

The Enterprise mine, at Belleville, has undergone repairs, putting up a new head-gear and adjusting safety catches.

Freeburg Coal Co., Freeburg, have constructed a new head-gear, sunk a new air-shaft, erected a fan and new boiler, and put in steel ropes.

Bessemer Coal Co., Summerfield, have just finished sinking the escapement shaft a depth of 300 feet, completing their new head-frame, putting in new cages, and making all buildings fire-proof.

They are now sinking the escapement shaft at the Oaklan mine, Belleville, and the Kloess mine has just finished putting in a new boiler.

The Northwestern mine, owned by the Consolidated Coal Co. and leased by Frank Kerchner, Belleville, has undergone repairs. A new head-frame has been built and other improvements made.

Valuable assistance has been rendered by the following County Mine Inspectors: Thomas Lloyd, Renschler, St. Clair county (whose commission has expired); A. L. Haig, of Caseyville, the present County Inspector of St. Clair county; George Gillette, Jackson county; and Wm. Knight, of Perry county.

STRIKES. .

At quite a number of mines the relations of operators and miners are far from being harmonious, and both parties seem unwilling to yield a point before the test of strength has been made. After a strike has occurred, the conclusion generally reached is that a settlement might have been attained beforehand had the parties come together in a business like manner.

It is to be hoped that in the future when misunderstandings arise, both operators and miners will be inclined to come together and adjust their differences in such a manner as to prevent the stopping of the works for a single day.

On February 1, 1888, the miners employed at the mines of the DuQuoin Coal Co., The Illinois Central Coal Co., and the Enterprise Coal Co., at DuQuoin, came out on a strike, to retain for February, March and April the 62½¢ per ton of 2,000 pounds which they had received during the months of October, November and December, 1887, and January, 1888.

The operators claim that on October 1, 1887, they entered into an agreement with the miners to work one year for the following prices: 62½¢ per ton of 2,000 pounds during the months of October, November and December, 1887, and January, 1888, and 56½¢

er ton of 2,000 pounds during the months of February, March and April, 1888, and 50c per ton of 2,000 pounds during the months of May, June, July, August and September, 1888; all coal to be weighed after passing over the companies' $1\frac{1}{2}$ inch screen. The miners worked the first three months at $62\frac{1}{2}$ c per ton, claiming that no contract had been entered into, and that they were at liberty to quit work at any time. The operators, on their part, claimed that there was a contract, which would have to be complied with before entering into any other agreement.

This state of affairs continued until about the first of May, 1888, at which time the miners went to work at 50c per ton, having been out on strike for three months.

April 20, 1888, the miners of the St. Louis Ore and Steel Co., the Carbondale Coal and Coke Co., and the Gartside Co., at Murphysboro, came out on a strike against a reduction of 10 per cent.

The companies claim that on November 1, 1887, by request of their employes, they adopted the Consolidated Coal Co.'s scale of prices; that the Consolidated Co., on April 2, 1888, reduced all machine miners 10 per cent., thereby necessitating the same reduction being made in the Big Muddy coal field.

The miners state that they did not accept the Consolidated Coal Co.'s scale as a basis of settlement, but that the Columbus scale was the basis.

After a strike of 20 days, the miners resumed work at a reduction of 12 per cent.

At the Crystal Plate Co., Fredonia, there have been various strikes, lasting from two days to two weeks, on such questions as laying point rails in the rooms, loading coal, etc., etc. On April 25, 1888, the miners at this mine came out on a strike against a reduction of 10 per cent. The strike was declared off June 8, 1888, the company having in the meantime commenced operations with Italian miners.

The miners of the Carterville Coal Co., at Carterville, came out on a strike against a similar reduction as the above. After being out a few days they compromised the matter and resumed work.

The miners of the Bryden Coal Co. instituted a strike June 1, 1888, against a reduction of 10 per cent. After being out for 40 days they accepted the reduction and went to work.

FATAL AND NON-FATAL ACCIDENTS.

Following are tabulated lists of the accidents during the year:

Fatal Casualties in the Fifth District.

LEGISLATION.

It is made the duty of the inspector of mines, in section 12 of the mining law, to recommend changes in, or amendments to the same.

In conformity with this section, I would respectfully recommend the passage of a measure, limiting the quantity of blasting powder conveyed to the working places of miners.

A fatal accident has occurred during the year, by which three men lost their lives, from the careless handling of a quantity of powder, sufficient to have met all their requirements in blasting for six days.

FIRES.

October 31, 1887, the fan house, blacksmith shop and oil room was totally destroyed by fire at the DuQuoin Coal Co.'s mines, DuQuoin.

The buildings of the Illinois Central Coal Co. at St. Johns were totally destroyed by fire on the evening of April 29, 1888.

This company was making preparations to start their works after being idle on a strike for three months; in making a fire under one of the boilers, used to generate steam for a salt well it was found that the soot in the chimney had caught fire; the sparks falling on the buildings set them on fire. Three engines, a slack washing machine, the elevators and a number of mine cars were all destroyed.

Since entering on my commission October 1, 1887, the most important mines have been visited from two to four times, and the smaller mines once.

Respectfully submitted,

JAMES TAYLOR,

Inspector Fifth District,

Ashley.
